Rb data center in Inyokern concerns

I have serious concerns over the proposed data center project in Inyokern. First concern is the water usage with the overdraft situation that our aquifer is in that is serious enough that we are all being told we need a pipeline to import water this is without the additional use from the proposed data center. My second concern is the wildlife habitat loss there are many species of lizards as well as snakes and even desert tortoises in the area. I live about 2 miles from the proposed site and just last year had a tortoise in front of my house. My third concern is the heat island effect raising temperatures by as much as 16 degrees up to 6 miles away I sure as hell do not want to live with Death Valley temperatures as it is we get temperatures ranging from 115 to 120 in the heat of summer the heat island effect would potentially bring those highs to near 140 degrees. My fourth concern is the potential noise pollution no one wants to hear a constant hum from all the equipment there. Lastly is the potential light pollution I rather enjoy my night sky view and do not want that ruined.
