RB Inyokern Data Center CUP

Additional submitted attachment is included below.

To Whom It May Concern,
Re: RB Inyokern Data Center CUP
CEC SPPE Docket No. 26-SPPE-01

My name is Robert Glenn Hamlett , and I am a retired American citizen writing to express my support for the proposed RB Inyokern Data Center project in Inyokern, California.

This issue is personally meaningful to me because I have family living in the region who have been affected by recent job layoffs and economic uncertainty impacting local communities. Seeing how difficult these situations can be for working families has made me appreciate the importance of projects that may bring new jobs, investment, and long-term economic opportunities to the area.

I believe projects like this are important for the future of our country as technology, artificial intelligence, and digital infrastructure continue to shape modern life. The United States must continue investing in innovation and infrastructure that will support economic growth, future opportunities, and long-term competitiveness.

What stands out to me most about this project is its potential to bring meaningful economic benefits to the local community and surrounding region. Large-scale developments such as the RB Inyokern Data Center can create construction jobs during the building phase as well as long-term technical, operational, and maintenance positions after completion. These kinds of opportunities can help support local families and strengthen the economy in Kern County.

I also recognize the potential benefits through increased tax revenue and economic diversification. Communities benefit when new industries and modern infrastructure investments help create a broader economic foundation instead of relying on only a limited number of sectors. Investment in technology infrastructure can encourage future growth and open the door to additional opportunities for the region.

In today's world, data centers are essential infrastructure. They support communication systems, cloud computing, businesses, education, healthcare technologies, and emerging AI systems that people and industries rely on every day. Supporting responsible technological development in the United States is important for our future.

I appreciate the opportunity for public input and respectful community discussion regarding this project. After reviewing the available information, I respectfully support the RB Inyokern Data Center project and encourage thoughtful consideration of the economic and technological benefits it may bring to the community and the region.

Thank you for your time and consideration.

Sincerely,
Robert Glenn Hamlett
Retired American Citizen
