RB Inyokern Data Center CEC Docket 26-SPPE-01

I am writing to request that a full review of the environmental impact of the RB Inyokern Data Center be completed and taken into consideration. I am not a hydrologist, I cannot site scientific facts about the status of groundwater overdraft in our basin nor of the strain on our local power grid that such a project would have. But this valley has been my home for over forty years. It is the home of my children, my grandchildren and my great grandchildren. The small town living, the dark night skies and the love of the quiet desert are what draw many of us here. But, living here requires sacrifices. We make those for the future home of our children. We have mandatory watering restrictions put in place by IWWWD. We have removed our lawn, our swamp coolers and dishwasher to decrease our consumption. We have installed solar to offset the ever increasing high electric bills. Water rights are currently going to trial. Water pipelines are being proposed at a hefty expense to the community and taxpayers. Common sense tells us industrial facilities that require the use of water from an over drafted groundwater system will cause an irreversible detrimental impact on our environment. Please make these decisions as though they will affect the future of YOUR children. Thank you for your time and consideration.
