RB Inyokern Data Center

I have lived in Ridgecrest for over 40 years I am very concerned about the amount of water a data center will draw from our critically overdrawn aquifer. The county approved land use for 6000 acres of pistachio trees which are already drawing way too much water we cannot afford to have another big water user come in and potentially drain our wells! These things should not take place in the desert where the heat in the summer can top 115 degrees. Please review everything and be realistic about what this will do to our communities. Thank you
