I VOTE NO IMPACT TO HIGH WHERE I LIVE IN REGARDS TO WATER AND POWER

I live in a small community in Ridgecrest, CA 93555 and you propose this facility in Inyokern, CA right near us. From the research I found you require a lot of water to cool the material for the AI Plant. We have enough rough time getting water from Los Angeles, CA we do not have enough water resources out here in the Desert. Also, the power or energy required for your plant will take away what little resources we have now for electricity. When the roars at 25 mile an hour out here we LOSE POWER so is that going to work for your facility. We have an aging community with people relying on their refrigerators to keep medicine cool and we have a lot of young families out here and I just saw a news article that your plants turn our underground water BROWN. This is not acceptable. It is bad enough that we shut a Nuclear Power Plant in San Diego, CA in the year 1992 from unsafe practices and now you want to use what little water we have to cool your plant too? MY VOTE IS NO. SINCERELY CONCERNED MOTHER, GRANDMOTHER, GREAT GRANDMOTHER ROSE M. KREIDT
