No to InyoKern Data Center

Hello, my name is Olivia Garcia and I am a life long resident of Bakersfield California in the Kern valley. I want to urge the commission to not approve the building permits and construction of the data center proposed in the Inyo / Kern county areas. The energy use that this center would demand in addition to the amount of water necessary to cool the computers working within these centers is absolute outrageous and not sustainable for our community. It would harden the water supply (which is already limited mind you) and place the residents of our county in a particularly hard situation when it comes to accessibility to clean water. Please please PLEASE do not approve this build. The residents of this county do not believe this would be a valuable addition to our communities and would in fact harm them significantly. Please look at ALL the data from the amount of water needed for this data center operate and compare them to the current water supply for the county in addition to the county already needed to overdraft from our ground water to keep up with supply for the people within Inyo and Kern county. There is simply not enough water. Additionally the release of Carbon from diesel engines used on these computers and within the center will increase the CO₂ in the air and raise temperatures in surrounding areas. Causing it to be warmer in the county and possibly furthering negative effects on snowpack for the winters. Which we depend on for the replenishment of our water reserves. Please run a FULL AND UNBIASED environmental panel REVIEW IT CAREFULLY- ASK THE EXPERTS IN THE FIELDS of water supplies and management in the area in addition to ALL effects this data center could cause on the environment and review them carefully. Please hear your constituents when we share of discontent for this data center.
