Oppose RB Inyokern Data Center

I am writing to lodge my opposition to the proposed RB Inyokern Data Center which presents a significant adverse environmental impact to a sensitive biodiverse area. This proposed project has great potential to 1)deplete groundwater leading to long term water sustainability 2)impact traffic and road access to local homes, schools and businesses 3)impact on noise and air quality

There are concerns and questions that this project demonstrates a reliable 20 year water supply as required by SB210 including 1)realistic expectations 2)affects of supply by required adjudication of basin groundwater 3)potential increase pressure for costly imported water or need for pipeline.

The zoning requirements for M-2 zone where this project is proposed states specifically "Uses may not produce fumes, odor, dust,smoke,gas or vibrations extending beyond zoning district boundaries." The effects of the proposed project most likely will not comply with M-2 requirements.

It is imperative to study further analysis of the potential harm this project will impact on local area so continued analysis must be made for water analysis, impact assessments, worst case scenarios, impact on future expansion, clear mitigation measures and enforcements.

The above reasons are reasons to oppose the RB Inyokern Data Center.
