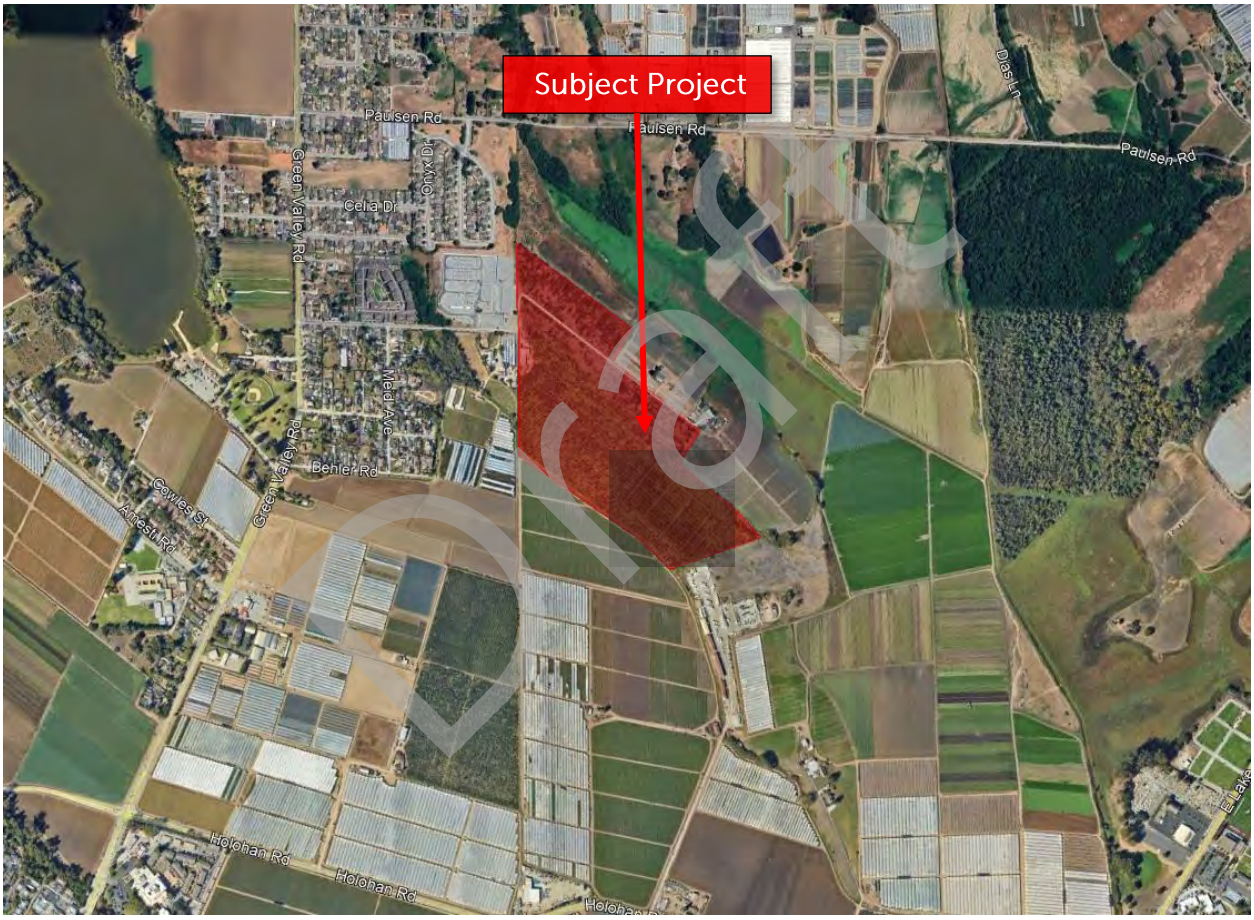
Introduction

The purpose of this report is to detail the fiscal and economic impacts of a proposed battery energy storage system ("BESS") on a 47-acre parcel in the unincorporated area in the County of Santa Cruz, CA north of the City of Watsonville. The energy facility is a standalone battery energy storage system of 200MW/800MWh and is anticipated to be online in May 2029 with a 20-year operational term. The property is currently used as agriculture for apple cultivation. The facility is located at 90 Minto Road as depicted in the following map:



The planned energy facility is anticipated to utilize approximately 10 acres of the property for the project. The remaining 37 acres will be put into a long-term conservation easement to preserve the agricultural lands. The remaining apple orchard acreage is expected to remain in production.

Research for this analysis was completed in September 2024. A supplemental section analyzing the socioeconomic impacts was added in April 2026.

Conclusions and recommendations are strictly those of London Moeder Advisors. Users of this information should recognize that the assumptions and projections contained in this report *will* vary from the actual experience in the marketplace. Therefore, London Moeder Advisors is not

responsible for the actions taken or any limitations, financial or otherwise of property owners, investors, developers, lenders, public agencies, operators or tenants.

Draft

Executive Summary

Fiscal Impact

London Moeder Advisors has evaluated the anticipated fiscal and economic impacts of the proposed BESS development in the County of Santa Cruz. The planned energy storage facility is expected to be online in May 2029 with a 20-year operational term.

The following bullet points highlight the newly generated impacts over the 20 years of operation:

Fiscal Impact to County

- Total property tax revenue of $41,418,947
- Total sales tax revenue on materials and equipment of $8,011,434
- A total of $50,000 in project development fees
- A total of $11,000 in land sale transfer tax
- A total of $100,000 in training & equipment to local fire protection district
- Total annual net surplus for the County of approximately $49,439,301 over a 20-year period

Summary of Fiscal and Economic Impacts
Santa Cruz County - Proposed Battery Energy Storage System

Fiscal Impacts to the County	20-Year
Property Tax Revenue	$41,418,947
Sales Tax Revenue from Development	$6,550,884
Sales Tax Revenue - Year 4 Augmentation	$717,500
Sales Tax Revenue - Year 9 Augmentation	$743,050
Land Sale Transfer Tax	$11,000
Total Development Fees	$50,000
Training & Equipment to Local Fire Protection District	$100,000
Total Revenue to County	$49,591,381
Costs to County	($152,080)
Surplus	$49,439,301

The following bullet points highlight the incremental results of the analysis, which are detailed in this report:

- The project is estimated to generate $2,070,947 of new property tax revenue annually, which is captured 100% by the County.

Draft

- Sales tax generated from the construction of the facility is estimated to be $17,780,970. The County of Santa Cruz's net share is estimated to be $6,550,884 on a one-time basis.

- Sales tax generated from the purchase of additional batteries and supplies (facility augmentation in Year 4 and Year 9) is estimated to be $3,964,350. The County of Santa Cruz's net share is estimated to be $1,460,550.

- In addition to the property tax revenue, the County of Santa Cruz will also receive an estimated $50,000 in impact fees paid from the development and an additional $11,000 of land sale transfer tax.

- The project is expected to provide $100,000 for training and equipment to the local fire protection district.

In total, the estimated revenue generated by the proposed facility is forecasted to be $49,591,381 over a 20-year period. The anticipated County expenses related to the facility over the 20-year period are estimated to be $152,080. Reconciling these revenues and costs results in a net surplus of an estimated $49,439,301 over 20 years to the County of Santa Cruz.

Economic Impacts

In addition to the direct fiscal impacts to Santa Cruz County, the project will have economic impacts to the region. The following highlights the results of the IMPLAN[1] model, which we utilized to calculate the economic impacts from BESS.

Economic Impact: Annually Recurring from Operations

- A total of 56 direct, indirect and induced jobs.
- Total direct, indirect and induced labor income of $4.7 million annually.
- Total direct, indirect and induced value added of $16.0 million annually. This category includes labor income, proprietor income, employee compensation, other property income, and taxes on production and imports.
- Total annual economic output of $48.3 million.
- Greenhouse gas emission reduction of 97% when utilizing renewable energy sources instead of fossil fuel generated electricity. (see Environmental)

Total Impact Summary (Annual Recurring)
Stabilized Operations

Impact	Employment	Labor Income	Value Added	Output
Direct Effect	5	$743,643	$8,364,685	$33,127,857
Indirect Effect	40	$3,283,167	$6,411,494	$13,154,758
Induced Effect	11	$664,975	$1,257,903	$1,996,694
Total Effect	**56**	**$4,691,785**	**$16,034,082**	**$48,279,309**

Source: London Moeder Advisors, Implan

[1] For details on the IMPLAN model and methodology, see Model Inputs section of this report.

Draft

Economic Impact: From Construction of Facility

- 50 jobs during construction; 5 permanent jobs related to operating the facility
- A total of 776 direct, indirect and induced jobs
- Total direct, indirect and induced labor income of $59.2 million annually.
- Total direct, indirect and induced value added of $104.8 million annually. This category includes labor income, proprietor income, employee compensation, other property income, and taxes on production and imports.
- Total annual economic output of $179.0 million.

Total Impact Summary (One-Time)
Contruction

Impact	Employment	Labor Income	Value Added	Output
Direct Effect	50	$3,751,044	$5,202,620	$8,409,465
Indirect Effect	588	$46,897,451	$83,492,985	$145,092,552
Induced Effect	139	$8,503,979	$16,083,881	$25,537,409
Total Effect	**776**	**$59,152,473**	**$104,779,486**	**$179,039,426**

Definitions & Interpretation of Results

There are three main economic indicators, or categories, that IMPLAN utilizes to show the results of an input-output analysis. The categories are summarized as follows:

- Direct Effect – Direct effects are the set of expenditures applied to the input-output multipliers for an impact analysis. It is one or more production changes or expenditures made by producers/consumers as a result of an activity or policy. Direct effects can be positive or negative.

- Indirect Effect – Indirect effects are the business-to-business purchases in the supply chain taking place in the region that stem from the initial industry input purchases. As the industry specified spends their money in the region with their suppliers, this spending is shown through the indirect effect.

- Induced Effect – Induced effects are the values stemming from household spending of Labor Income, after removal of taxes, savings, and commuter income. The induced effects are generated by the spending of the employees within the business' supply chain.[2]

In addition to these summary impacts, there are four main economic indicators, or categories, which quantify the economic impacts of a given company in a region. The categories are summarized as follows:

[2] IMPLAN – Understanding IMPLAN: Direct, Indirect, and Induced Effects

- **Output** – Most commonly referred to as revenue, IMPLAN defines output as the total annual production value of each industry or commodity. The formula IMPLAN uses to calculate output is the sum of value added and intermediate inputs. *Value added is essentially a company's GDP. Intermediate inputs are commodities that require further processing or distribution before they are ready for sale to the final user. For example, BESS's intermediate input is the further processing and distribution of energy.*

  Top industries impacted by **output** (other than electric power generation) include Electric Power Transmission and Distribution, Other Local Government Enterprises, Employment Services, Other Real Estate and Wholesale – Petroleum and Petroleum Products. (See Output)

- **Employment** – Employment – IMPLAN follows the same definition as the Bureau of Economic Analysis Regional Economic Accounts (BEA REA) and Bureau of Labor Statistics Census of Employment and Wages (BLS CEW), which is full-time/part-time annual average. *Employment is the number of people who work at a job. IMPLAN assumes that one job lasting 12 months equals two jobs lasting six months, and similarly two jobs lasting six months is equal to three jobs lasting four months each.*

  Top industries impacted by **employment** (other than the electric power generation) include Employment Services, Scenic and Sightseeing Transportation and Support Activities for Transportation, Electric Power Transmission and Distribution, Full-Service Restaurants, Other Real Estate. (See Employment)

- **Value Added** – IMPLAN defines value added as the difference between Output and the cost of intermediate inputs. This data point is a large portion of Output as it encompasses labor income, proprietor income, employee compensation, other property income, and taxes on production and imports. *Value added is equivalent to the industry's contribution to a region's gross domestic product (GDP). This value can be negative when costs outpace revenues.*

  Top industries impacted by **value added** (other than the electric power generation) include Electric Power Transmission and Distribution, Other Local Government Enterprises, Employment Services, Scenic and Sightseeing Transportation and Support Activities for Transportation and Scientific Research and Development Services. (See Value Added)

- **Tax Impact** – Tax Impact – IMPLAN includes sales and excise taxes, customs duties, property taxes, motor vehicle licenses, severance taxes, other taxes, and special assessments.[3] *The tax revenue estimated by the IMPLAN model is the best available estimation of taxes generated. It is based on general economic multipliers for various cost and revenue categories by a specific company. It is not intended to be an exact calculation of taxes, but an order-of-magnitude estimate.*

  BESS's business activities will generate a **tax impact** estimated at $1.5 million for Federal tax. It also generated $4.4 million in taxes for State and Local use in the region, $1.6 million for

[3] IMPLAN – Employment Data Details

Draft

County taxes, $2.6 million for special districts such as fire and public schools and $1.1 million for Sub County General taxes. (See Tax Impact)

LMA's analysis does not include contributions made by BESS or its employees to the social, charitable, or civic fabric of the community. While significant, these contributions are difficult to quantify.

Draft

Fiscal Impacts

This section details the fiscal impacts generated by taxes and fees associated with the project and is divided into the following four subsections:

- Revenues to the County of Santa Cruz
- Costs to the County of Santa Cruz
- Reconciliation of revenues and costs
- Project development fees

Revenues to the County of Santa Cruz

This section summarizes the various sources of revenue to the County of Santa Cruz generated by the battery storage facility.

Property Tax

The development of the project will increase the property tax revenue collected by the County of Santa Cruz. The estimated development costs of the project are $191 million plus the estimated land value of $10 million.

Based on the estimated construction costs of $191 million and the land value of $10 million and utilizing the property tax rate of 1.08226%, the annual property tax payment is estimated to be $2.07 million. This translates to $41,418,947 over 20 years. The County retains 100% of the property tax revenue and allocates it among local schools, public safety, redevelopment, incorporated cities and county services. This results in an estimated $2.07 million of new property tax revenue that will be generated by the project annually, resulting in a 997% increase when compared to existing property taxes currently generated by the approximately 10-acre site ($903,409).[4]

Sales Tax

To calculate sales tax revenue, we utilized the estimated construction costs of materials and applied the sales tax rate in the unincorporated county of 9.5%. The estimated cost of construction materials purchased in Santa Cruz County is $187,168,103 which generates sales tax revenue estimated to be $17,780,970. The County's portion of the tax rate represents 3.5%, or $6,550,884.

There are two additional facility augmentation events that are anticipated to occur in Year 4 and Year 9. In these years the facility is expected to replace equipment at a combined total cost of $41,730,000. The augmentations are anticipated to generate additional sales tax revenue of $3,964,350, of which the County's share is estimated to be $1,460,550.

Draft

[4] The battery storage facility represents approximately 10 acres, or 21.3%, of the 47-acre property.

Other Revenue

In addition to taxes, the County of Santa Cruz will receive revenue from development fees and the transfer tax resulting from the sale of the land. Additionally, the local fire protection district will receive revenue for training and equipment. Combined, these additional sources of revenue total $161,000.

Total County Revenues

In total, we estimate that the development of the project will generate an estimated $69,441,381 in direct revenue to the County of Santa Cruz during the first 20 years of operation. Of this total, only the property tax will recur annually. The following table summarizes the various revenues to the County over the 20-year period.[5]

Estimate of Revenues
Santa Cruz County - Proposed Battery Energy Storage System

I. Property Tax		
Estimated Construction Cost[1]		$191,353,253
Estimated Land Value[2]		$10,000,000
Subtotal Estimated Value		$201,353,253
Annual Property Tax Rate	1.08226%	$2,070,947
Total Property Tax to County	**100%**	**$2,070,947**
Property Tax Generated to County (20 years)		**$41,418,947**
II. Sales Tax - Equipment[1]		
Construction Purchased in County		$187,168,103
Sales Tax	9.5%	$17,780,970
To County	3.5%	$6,550,884
Year 4 Augmentation		$20,500,000
Tax Rate	9.5%	$1,947,500
To County	3.5%	$717,500
Year 9 Augmentation		$21,230,000
Tax Rate	9.5%	$2,016,850
To County	3.5%	$743,050
Total Sales Tax Equipment to County		**$8,011,434**
III. Other Revenue		
Development Fees[1]		$50,000
Land Transfer Tax		$11,000
Training & Equipment to Local Fire Protection District		$100,000
Total Other Revenue to County		**$161,000**
Total Revenues		**$49,591,381**

Draft

Costs to the County of Santa Cruz

This section summarizes the various costs to the County of Santa Cruz which are likely to result from the development of the project, including but not limited to public safety and infrastructure.

To determine the costs to the County, we analyzed the County of Santa Cruz Adopted Budget (2023-2024). We examined each expense category and determined if it applied to the resident population or the effective population and calculated the amount accordingly. The following table summarizes our analysis of County-wide costs.

Summary of Santa Cruz County
Santa Cruz County - Proposed Battery Energy Storage System

Demographic Profile	Total Population[1]	Total Employment[2]	Effective Pop Pop & Jobs		
Santa Cruz County	262,051	127,400			
Jobs Per Population		0.49			
Santa Cruz County Resident Equivalent	262,051	61,937	323,988		
General Fund Category	**Budgeted Cost**				
General Government	**$161,814,695**	18.5% of Core City Services Expenditures			
		Service Population	*Population Type*	*Amount Per Resident or R.E.*	
Core County Services[3]					
Public Protection	$223,790,975	Effective Population	323,988	$690.74	
Public Ways and Facilities	$141,360,129	Effective Population	323,988	$436.31	
Heath & Sanitation	$256,476,955	Effective Population	323,988	$791.62	
Public Assistance	$217,124,311	Effective Population	323,988	$670.16	
Education	$7,551,941	Resident Population	262,051	$28.82	
Recreation & Cultural	$13,539,319	Resident Population	262,051	$51.67	
Debt Service	$9,238,293	Effective Population	323,988	$28.51	
Contingencies	$7,571,385	Effective Population	323,988	$23.37	
Subtotal Core City Services	**$876,653,308**				
Total	$1,038,468,003

[2]State of California EDD

Draft

Allocating costs to cities and counties is calculated by weighing the costs on a per-capita basis. The total population represents the resident population that lives within the County. The effective population combines residents with the employment population that works within the County. The impact of employment is not as significant to a jurisdiction because: 1) some people already live and work in the same city/county, which would double count the cost to the city/county, and 2) some employees live outside the city/county and leave the area after the workday. Therefore, the total employment of a proposed project is adjusted by applying the jobs-per-population ratio of the given city or county.

Based on the County of Santa Cruz's jobs-per-population ratio of 0.49, the total effective population of the battery storage facility is estimated to be 2.4 persons.

With the County expenses estimated on a per-resident or per-effective-population basis, we can apply these expenses to the estimated permanent jobs generated by the project. The following table details the estimated annual recurring costs to the County of Santa Cruz from the development of the project. The County costs are estimated to be $7,604 annually, or $152,080 over 20 years.

Estimate of Costs
Santa Cruz County - Proposed Battery Energy Storage System

Demographic Profile	Total Population	Total Employment	Effective Pop Pop & Jobs
Proposed Project	0	5	
Jobs Per Population		0.49	
Proposed Project R.E.	0	2.4	2.4

Worker Impact Population		2.4
Less: Reduction for Job Transfer	0%	0.0
Total New Jobs Onsite		2.4

	Service Population	Population Type	Amount Per Resident or R.E.	Cost of Service

Reconciliation of County Revenues and Costs

The following section reconciles the revenues and costs to the County of Santa Cruz associated with the development of the project.

We have determined that the 20-year revenues from development of the project are estimated to be $49,591,381. The 20-year expenses are estimated at $152,080. Therefore, this project is anticipated to generate a 20-year surplus of $49,439,301 to the County of Santa Cruz, as detailed in the following table:

Estimate of Stabilized Fiscal Impact
Santa Cruz County - Proposed Battery Energy Storage System

20-Year Revenue Sources	Totals	%
Property Tax to County (20 years)	$41,418,947	83.52%
Sales Tax to County - Construction	$6,550,884	13.21%
Development Fees	$50,000	0.10%
Sales Tax to County - Year 4 Augmentation	$717,500	1.45%
Sales Tax to County - Year 9 Augmentation	$743,050	1.50%
Land Sale Transfer Tax	$11,000	0.02%
Training & Equipment to Local Fire Protection District	$100,000	0.20%
Total 20-Year Revenues	**$49,591,381**	**100.00%**

20-Year Expenses	Totals	%
Public Protection	$33,581	22.08%
Public Ways and Facilities	$21,212	13.95%
Heath & Sanitation	$38,486	25.31%
Public Assistance	$32,581	21.42%
Education	$0	0.00%
Recreation & Cultural	$0	0.00%
Debt Service	$1,386	0.91%
Contingencies	$1,136	0.75%
General Government	$23,697	15.58%
Total 20-Year Expenses	**$152,080**	**100.00%**

20-Year Surplus/(Deficit)	**$49,439,301**

Economic Impacts

The purpose of this section is to analyze the economic and fiscal impacts generated by BESS's expenditures and business activities. Economic impact modeling is a standard tool used to quantify the economic contribution of an investment or company. Such modeling uses an "input-output" economic model to estimate the number of times each dollar of "input," or direct spending, cycles through the economy in terms of "indirect and induced output," or additional spending, personal wages and employment.[6]

There are several input-output models used by economists to estimate multiplier effects. Supplier.io, a data consultancy firm, employed the IMPLAN input-output model in developing estimates of spending, wages and employment impacts. This model, initially developed by the U.S. Department of Agriculture, examines interindustry relationships in local, regional and national economies.

An input-output model uses a matrix representation of a nation's interconnected economy to calculate the effect of changes in spending by consumers, across industries and the entire economy. This matrix representation and the related input-output tables ultimately measure "multiplier effects" of an industry by tracing the effects of its interindustry transactions, which include the number value of goods and services that are needed (inputs) to produce each dollar of output for the individual sector analyzed.

In essence, an input-output model is a table that shows who buys what and from whom in the economy.[7]

Our analysis is based on input data provided by New Leaf Energy using IMPLAN's input-output multipliers and the supplier diversity information in supplier.io's database.

Draft

Model Inputs

This section summarizes the data inputs provided by BESS utilized in the IMPLAN model that analyzes the economic impacts.

Employment, Annual Revenue & Operating Expenses

IMPLAN has no identifiable classification for the BESS facility, thus we allocated the revenue and operating expenses utilizing a pro rata share of the total output and expenditures. These pro rata shares were allocated between the electric generation source categories of solar, wind and hydroelectric. The following table details the expected generation source allocation of electricity that will be stored at the BESS facility.

[6] US Government Revenues: www.usgovernmentrevenue.com/total 2014USrt 17rs1n
[7] US GDP: www.tradingeconomics.com/united-states/gdp

Expected Source Generation of Power Stored at the Proposed BESS Revenue & OpEx Allocation (Annual Recurring)

Industry	Source %	Revenue	OpEx
42 - Electric power generation - Solar	70%	$22,915,200	$3,012,910
39 - Electric power generation - Hydroelectric	15%	$4,910,400	$645,624
43 - Electric power generation - Wind	15%	$4,910,400	$645,624
Total	100%	$32,736,000	$4,304,157

Source: New Leaf Energy

We utilized the expected source allocation to calculate the pro rata share of revenue and expenses. Total annual revenue is anticipated to be $32.7 million with annual expenses anticipated to total $4.3 million.

There is currently no output value associated with hydroelectric and wind power generation in Santa Cruz County. Therefore, we applied the Unites States average output per worker to both the hydroelectric and wind power generation industries in Santa Cruz County.

Economic Indicators by Impact

There are four main economic indicators, or categories, that IMPLAN utilizes to quantify and detail the economic impacts of a given company in a region. The categories are summarized as follows:

- Output – Most commonly referred to as revenue, IMPLAN defines output as the total annual production value of each industry or commodity. The formula IMPLAN uses to calculate output is the sum of value added and intermediate inputs. *Value added is essentially a company's GDP. Intermediate inputs are commodities that require further processing or distribution before they are ready for sale to the final user. For example, BESS's intermediate input is the further processing and distribution of energy.*

- Employment – IMPLAN follows the same definition as the Bureau of Economic Analysis Regional Economic Accounts (BEA REA) and Bureau of Labor Statistics Census of Employment and Wages (BLS CEW), which is full-time/part-time annual average. *Employment is the number of people who work at a job. IMPLAN assumes that one job lasting 12 months equals two jobs lasting six months, and similarly two jobs lasting six months is equal to three jobs lasting four months each.*

- Value Added – IMPLAN defines value added as the difference between Output and the cost of intermediate inputs. This data point is a large portion of Output as it encompasses labor income, proprietor income, employee compensation, other property income, and taxes on production and imports. *Value added is equivalent to the industry's contribution to a region's gross domestic product (GDP).*

- Tax Impact – IMPLAN includes sales and excise taxes, customs duties, property taxes, motor vehicle licenses, severance taxes, other taxes, and special assessments.[8] *The tax revenue estimated by the IMPLAN model is the best available estimation of taxes generated. It is based on general economic multipliers for various cost and revenue categories by a specific company. It is not intended to be an exact calculation of taxes, but an order-of-magnitude estimate.*

The following tables and charts further detail these four main categories of BESS's economic impact within Santa Cruz County.

Output

The tables and charts in this section detail BESS's impact on economic or business output (e.g., GDP) in Santa Cruz County. Included are the impacts to Output for the top 15 industries impacted by BESS's economic activities. *Intermediate inputs are commodities that require further processing or distribution before they are ready for sale to the final user. For example, BESS's intermediate input is the further processing and distribution of energy.*

See the Appendix for definitions of the top 15 impact industry displays.

Tax Impact

The tables and charts in this section detail BESS's impact on federal tax, state tax, county tax, sub county (special districts) tax, and sub county (General) tax. In general, these tax impacts capture all tax revenue in the study area across all levels of government that exist in that study area for the specific industries and institutions impacted by the BESS facility.

Taxes are levied at different levels of government. In IMPLAN, the results are detailed at the State and Local level, as well as the Federal, County, Sub County General, Sub County Special Districts. Sub County General includes city and township governments. Sub County Special includes fire and public-school districts.

The tax revenue estimated by the IMPLAN model is the best available estimation of taxes generated. It is based on general economic multipliers for various cost and revenue categories by a specific company. It is not intended to be an exact calculation of taxes, but an order-of-magnitude estimate.

Draft

The following table summarizes the total Federal Tax impact of the BESS facility based on New Leaf Energy's projected budget in 2024 dollars.

Federal Tax Impact
Proposed Battery Energy Storage System - IMPLAN Analysis

Description	Employee Compensation	Proprietor Income	Tax on Production and Imports	Households	Corporations
Social Insurance Tax- Employee Contribution	$261,132	$37,670

Environmental

Another important output for consideration of the operation of the BESS facility is the impact on the environment. Specifically, the amount of Greenhouse Gases emitted by the facility. For this analysis we analyzed the emissions of the planned facility utilizing the expected usage of solar (70%), wind (15%) and hydroelectric electricity generation (15%) compared to the emissions output of a fossil fuel electricity generation facility.

As the following table details, the emissions savings for utilizing renewable sources instead of fossil fuels for power generation is 498,907,316 kg of greenhouse gases per year, or 97% less.

Fossil Fuel vs. Renewable Energy Sources
Enviromental Output
Santa Cruz County

	Greenhouse Gases (Kg)		
Source	Renewable Energy Sources	Fossil Fuel	Output Reduction (Kg)
39 - Electric power generation - Hydroelectric	3,456	0	3,456
40 - Electric power generation - Fossil fuel	0	501,829,036	-501,829,036
41 - Electric power generation - Nuclear	0	0	0

Socioeconomic Impact Analysis

This section evaluates the potential socioeconomic impacts of the proposed battery energy storage facility in an unincorporated portion of Santa Cruz County and the surrounding region.[9]

The analysis considers existing socioeconomic conditions in the area, including population characteristics, employment patterns, housing availability, and public service capacity. We also assess how project construction and activities could interact with these conditions. The evaluation also considers the scale and duration of the workforce associated with construction and operations, potential local procurement and economic activity, and the project's contribution to regional energy reliability and infrastructure.

Regional Overview

Santa Cruz County is located on the northern shore of Monterey Bay approximately 70 miles south of San Francisco and forms part of the broader Bay Area economic region. The county encompasses roughly 445 square miles and includes four incorporated cities—Santa Cruz, Watsonville, Capitola, and Scotts Valley—as well as numerous unincorporated communities.

Economic Characteristics

The local economy is characterized by a mix of agriculture, tourism, education, technology services, and public sector employment. Proximity to Silicon Valley influences the county's economic profile, contributing to commuting patterns, housing pressures, and a growing technology workforce.

Economic Base

The economic base is composed of multiple sectors including Agriculture, Tourism and Recreation, Higher Education and Research, Technology and Professional Services and Retail and Service Sectors. The following bullet points detail these sectors:

- **Agriculture** – one of the foundational economic sectors of Santa Cruz County, particularly in the southern Pajaro Valley near Watsonville. Major crops include strawberries, raspberries, lettuce, apples, nursery products, and cut flowers.

  The agricultural industry is estimated to contribute approximately $1.6 billion annually to the county economy when including direct production, processing, and secondary economic effects. The sector employs nearly 12,000 workers when direct and indirect jobs are considered.

[9] This analysis has been added in April 2026 to our original report delivered in September 2024.

Draft

The region benefits from fertile soil, coastal climate conditions favorable for specialty crops, and access to statewide and international agricultural markets.

- Tourism and Recreation - Tourism represents another major pillar of the county's economic base. Coastal amenities, redwood forests, and cultural attractions attract millions of visitors annually. Key attractions include the beaches of Monterey Bay, coastal parks, and the historic boardwalk area.

  Visitor spending supports hospitality, retail, and food service industries and generates significant local tax revenue through sales taxes and transient occupancy taxes (hotel taxes). Tourism activity supports thousands of jobs in the county's service sector.

- Higher Education and Research - University of California, Santa Cruz (UCSC) significantly shapes the county economy. The university is one of the largest employers in the region and drives research activity, technology transfer, and workforce development. UCSC also contributes to the growth of research-based firms and startup companies in fields such as:

  - Biotechnology
  - Environmental science
  - Marine sciences
  - Information technology
  - University spending and student activity contribute substantially to the retail, housing, and service sectors.

- Technology and Professional Services - Although smaller than neighboring Silicon Valley, Santa Cruz County hosts a growing cluster of technology firms, particularly in software development, digital media, and data analytics. Technology employment has been strengthened by the county's proximity to major innovation centers in Silicon Valley and San Jose. This proximity encourages commuting, remote work arrangements, and satellite office locations within Santa Cruz County.

- Retail and Service Sectors - Retail trade and local services form a significant share of employment in the county. These sectors support the tourism industry and the local population. Major retail areas are located in downtown Santa Cruz, Capitola Village, and commercial centers in Watsonville. Service-sector employment includes healthcare providers, educational institutions, and social services.

Fiscal Resources

Local government revenues in Santa Cruz County are derived from a combination of tax revenues, service charges, intergovernmental transfers, and miscellaneous revenues. The following bullet points highlight the most recent revenues by source as outlined in the FY 2025-2026 budget:

- Total revenues: approximately $1.26 billion

- Total expenditures: approximately $1.35 billion

Draft

- General Fund revenues (major categories):
  - Taxes
    - Property tax allocations
    - Sales and use tax
    - Transient occupancy tax (TOT)
    - Deed transfer tax
    - Cannabis business tax
    - Franchise and utility taxes
  - Intergovernmental Revenues - State and federal transfers account for a large portion of local budgets. Intergovernmental revenues represented over $470 million in county budget revenues in recent fiscal years.
  - Charges for Services
    - Planning and development fees
    - Health services
    - Park and recreation fees
    - Permit and inspection charges
    - These fees support the operational costs of county departments.
  - Licenses, Permits, and Franchise Fees
    - Local agencies collect business license fees, building permits, and franchise fees from utilities and telecommunications providers.

Local Agencies with Taxing Authority

Multiple local governmental entities within Santa Cruz County have authority to levy taxes or assessments. These agencies finance public services such as education, infrastructure, and utilities.

- Santa Cruz County Government
- Incorporated Cities - Each city collects property tax allocations, sales taxes, and local fees.
  - Santa Cruz
  - Watsonville
  - Scotts Valley
  - Capitola
- Educational Agencies
  - Santa Cruz County Office of Education
  - Local school districts (e.g., Santa Cruz City Schools, Pajaro Valley Unified School District) also possess taxing authority through voter-approved parcel taxes and bonds.

Draft

- Special Districts
  - Transportation
  - Water and Utilities
  - Fire Protection Districts

Draft

Social Characteristics

The social characteristics of Santa Cruz County reflect a combination of a coastal college community, an environmentally oriented culture, and a relatively affluent but unequal housing market. These characteristics come from its demographics, economy, culture, and political orientation.

Population and Demographic Composition

The population in Santa Cruz County is currently estimated to be 260,298 people. This represents a 0.8% decline from the 2010 census. Total households are currently estimated at 91,837, a 2.7% decline from the 2010 census. The following table details the population and household changes from the 2010 and 2020 censuses and the 2026 estimate.

Population Demographics
Santa Cruz County

Year	2010	2020	2026

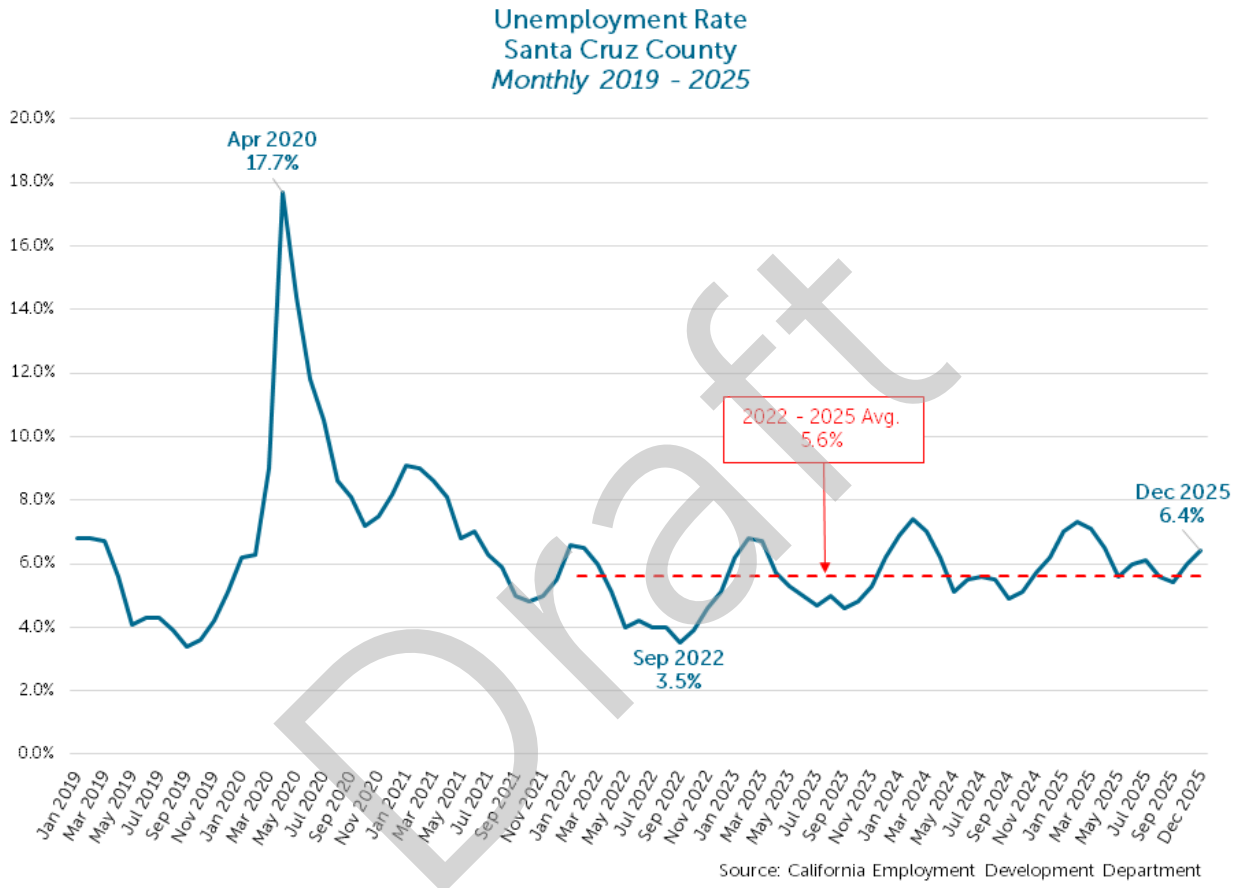
Unemployment Rates

The Unemployment rate in Santa Cruz County has remained largely stable since recovering from the unemployment surge caused by Covid-19 in 2020. Since the beginning of 2022, the unemployment rate has averaged 5.6%. In December of 2025, the unemployment rate was 6.4%.



Draft

Santa Cruz County's unemployment rate tends to be above both the state and national average despite a labor force participation rate that is typically on par with the state and national averages[10].

Many of the employment sectors in Santa Cruz County, including tourism, hospitality and agriculture are seasonal and therefore are prone to fluctuations in employment levels[11].

California's Department of Finance projects that unemployment in Santa Cruz County is forecasted to be 6.3% in 2030, 6.1% in 2035 and 6.0% in 2040 through 2055[12].

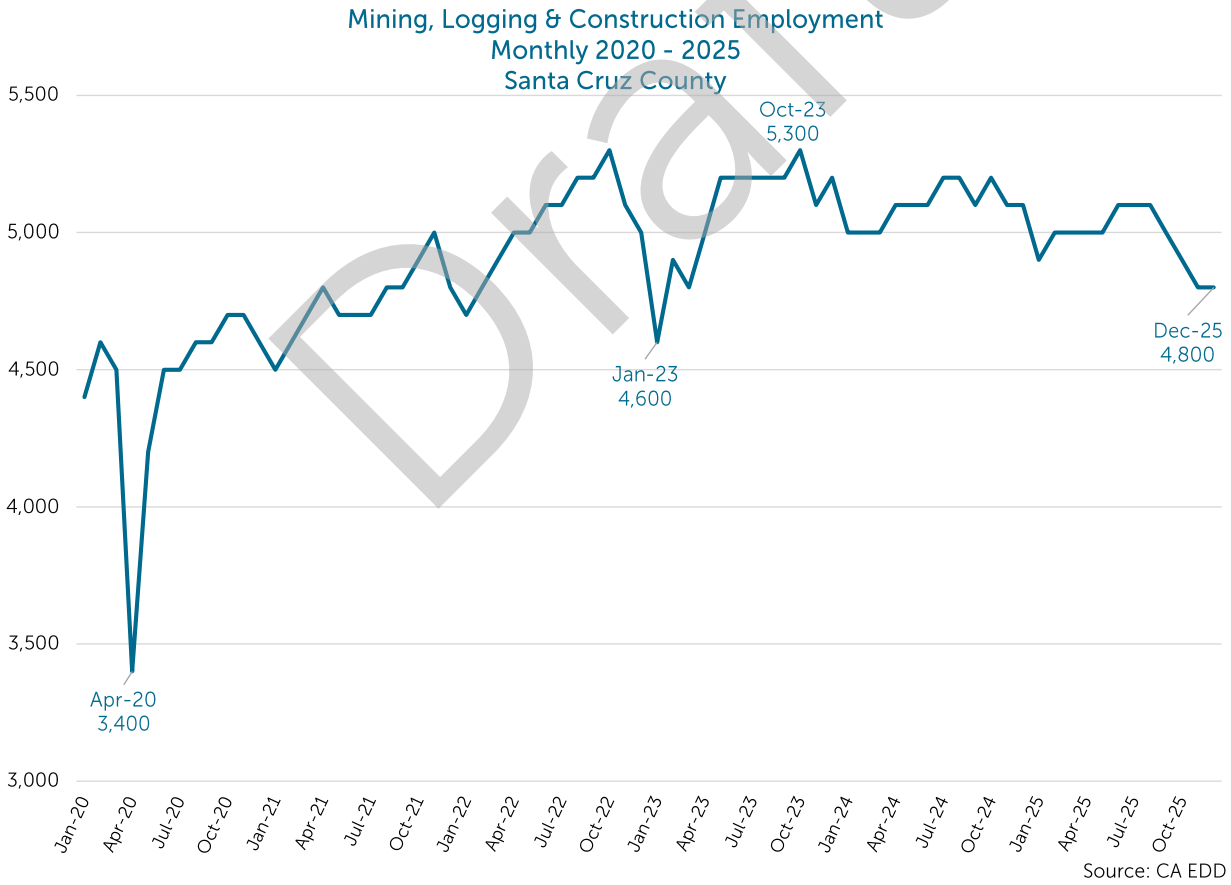
[10] Santa Cruz County 2025 State of the Workforce.
[11] Ibid.
[12] Santa Cruz County Demographic and Economic Profile and Long-Run Forecast. CA DOF/Caltrans

Worker Availability

As detailed in the Economic Impacts Results section in this report, the total employment generated by the construction and operation of the BESS is anticipated to be 55 jobs. Of these, 50 jobs will be during the construction of the project with five jobs maintained during the operation of the facility.

The Mining, Logging and Construction sector of employment in Santa Cruz County has averaged approximately 5,053 jobs in the last three years. Employment has ranged from 4,600 to 5,300 in that time span. In the last year, this sector has declined by roughly 300 jobs, or 5.9%. However, with a small construction employment total anticipated for the project coupled with the county unemployment rate of 6.4%, there is not expected to be a construction worker shortage for the BESS.

The following chart details employment in the construction sector from the decline noted during Covid to the end of 2025:



Source: CA EDD

Draft

Housing Availability

Housing options in Santa Cruz County include single family homes, condominiums, townhomes and apartments. Short-term options include hotels, motels and vacation rentals. The short-term options are best suited for the construction workers (50) while longer-term options would be suitable for the operations jobs (5).

For the longer-term options, there are currently 344 single-family homes, 31 townhomes and 79 condominiums listed for sale in Santa Cruz County. This translates to 90.8 available homes per worker. Apartment vacancy countywide totals 656 units or 3.9%. These available apartments translate to 12 available apartments per worker.

The short-term options include 841 vacation rentals and roughly 5,000 hotel and motel rooms. These options are more than significant enough to house workers during the construction period.

This analysis assumes that all the 55 workers come from outside of Santa Cruz County and will need either a short-term or a long-term option. In fact, it is likely that many of the workers (90%), particularly those involved in the construction process, reside in the county and will simply commute to the project site. The operations employees will likely come from outside of the county and are already employed with New Leaf.

Project Impacts

Employment

Our IMPLAN analysis (see the Total Impact Summary section of this report) indicates a total of 55 jobs will be generated by the construction and operation of the BESS facility. Of these, 50 will be during the construction period that is expected to last a total of 18 months. Not all trades will be active during that 18-month period. The remaining five jobs will be in the stabilized operations of the facility that is expected to be in operation for at least 20 years.

Local Employment

Non-local workers are anticipated to be less than 10% of the construction employment, while 100% of the sustained operations jobs are expected to be filled from outside of the county.

Population Impact

In the Costs to the County of Santa Cruz section of this report, we calculated the effective population of Santa Cruz County. The effective population combines residents with the employment population that works within the County. Based on the County of Santa Cruz's jobs-per-population ratio of 0.49, the total effective population of the battery storage facility is estimated to be 2.4 persons.

Population Impact on Housing

Our previous analysis indicated that there are plenty of housing options available for both the construction and operations phases of the facility. Given the minimal population impact of the operation of the storage facility, the impact of these additional 2.4 people is expected to be negligible.

School Impact Fees

The proposed project is on a 47-acre parcel in an unincorporated portion of Santa Cruz County. However, the construction of the BESS is expected to utilize approximately 10 acres. Based on this usage, the total one-time impact fee is anticipated to be $339,768, or $0.78 per square foot.

Payroll Estimates

Total construction payroll is estimated (see the Total Impact Summary section of this report) to be $3,751,044 for the 50 workers. Total annual payroll for operations is estimated to be $743,643 for five workers.

Expenditures for Materials

Locally purchased materials anticipated to be utilized for the construction of the facility are budgeted to cost $187,168,103. Of this one-time expenditure, sales tax is expected to be $17,780,970 with the portion to the county anticipated to be $6,550,884. Augmentation expenditures, anticipated in year 4 and year 9 are expected to cost $41,730,000 and will generate a sales tax of $3,964,350 with $1,460,550 to the county. In total, these one-time and recurring purchases are estimated to generate $8,011,434 to the county. (see the Total County Revenues section of this report)

Capital Cost

The estimated capital cost of construction is budgeted to be $191,353,253 with an additional $10,000,000 for land acquisition. A total of $201,353,253. (see the Total County Revenues section of this report)

Property Tax

Property tax on the estimated $201,353,253 value of the property at completion is anticipated to be $2,070,947 in the first year of completion. (see the Total County Revenues section of this report)

Employment Effects

Construction and operation of the BESS facility will generate direct, indirect, and induced income and employment effects. The construction phase is expected to directly support 50 jobs and generate $3.75 million in labor income. Indirect effects are expected to support 588 jobs and generate $46.9 million in labor income. Induced effects are expected to support 139 jobs and contribute $8.5 million in labor income.

Across all three types of effect, construction of the facility is expected to generate a combined 776 jobs and produce $59.15 million in labor income. These are one-time impacts that occur during the construction period, representing a significant short-term economic stimulus to the regional economy.

Stabilized operations impacts are expected to directly sustain 5 permanent jobs with $743,643 in annual labor income. Indirect effects will sustain an additional 40 jobs generating $3.28 million in labor income. Induced effects are expected to add 11 jobs annually, contributing $664,975 in labor income.

In aggregate, the project's stabilized operations are expected to generate 56 jobs and $4.69 million in annual labor income. These are recurring economic benefits that compound in significance over time, effectively making the project a permanent contributor to regional economic health. (see the Total Impact Summary section of this report)

Industry Definitions

Impact Industry Display	Definition
39 - Electric power generation - Hydroelectric	This U.S. industry comprises establishments primarily engaged in operating hydroelectric power generation facilities. These facilities use water power to drive a turbine and produce electric energy. The electric energy produced in these establishments is provided to electric power transmission systems or to electric power distribution systems.
40 - Electric power generation - Fossil fuel	This U.S. industry comprises establishments primarily engaged in operating fossil fuel powered electric power generation facilities. These facilities use fossil fuels, such as coal, oil, or gas, in internal combustion or combustion turbine conventional steam process to produce electric energy. The electric energy produced in these establishments is provided to electric power transmission systems or to electric power distribution systems.
42 - Electric power generation - Solar	This U.S. industry comprises establishments primarily engaged in operating solar electric power generation facilities. These facilities use energy from the sun to produce electric energy. The electric energy produced in these establishments is provided to electric power transmission systems or to electric power distribution systems.
43 - Electric power generation - Wind	This U.S. industry comprises establishments primarily engaged in operating wind electric power generation facilities. These facilities use wind power to drive a turbine and produce electric energy. The electric energy produced in these establishments is provided to electric power transmission systems or to electric power distribution systems.
46 - Electric power generation - All other	This U.S. industry comprises establishments primarily engaged in operating electric power generation facilities (except hydroelectric, fossil fuel, nuclear, solar, wind, geothermal, biomass). These facilities convert other forms of energy, such as tidal power, into electric energy. The electric energy produced in these establishments is provided to electric power transmission systems or to electric power distribution systems.
47 - Electric power transmission and distribution	This U.S. industry comprises establishments primarily engaged in operating electric power transmission systems and/or controlling (i.e., regulating voltages) the transmission of electricity from the generating source to distribution centers or other electric utilities. The transmission system includes lines and transformer stations.
49 - Water, sewage and other systems	This industry comprises establishments primarily engaged in operating water treatment plants and/or operating water supply systems. The water supply system may include pumping stations, aqueducts, and/or distribution mains. The water may be used for drinking, irrigation, or other uses.
60 - Maintenance and repair construction of nonresidential structures	This industry group comprises establishments primarily responsible for the construction (including new work, additions, alterations, maintenance, and repairs) of nonresidential buildings. This industry group includes nonresidential general contractors, nonresidential for-sale builders, nonresidential design-build firms, and nonresidential project construction management firms.
154 - Petroleum refineries	This industry comprises establishments primarily engaged in refining crude petroleum into refined petroleum. Petroleum refining involves one or more of the following activities: (1) fractionation; (2) straight distillation of crude oil; and (3) cracking.
399 - Wholesale - Petroleum and petroleum products	This industry comprises establishments with bulk liquid storage facilities primarily engaged in the merchant wholesale distribution of crude petroleum and petroleum products, including liquefied petroleum gas.
400 - Wholesale - Other nondurable goods merchant wholesalers	This industry comprises establishments primarily engaged in the merchant wholesale distribution of stationery, office supplies, and/or gift wrap.
408 - Retail - Gasoline stores	This industry comprises establishments engaged in retailing automotive fuels (e.g., diesel fuel, gasohol, gasoline) in combination with convenience store or food mart items. These establishments can either be in a convenience store (i.e., food mart) setting or a gasoline station setting. These establishments may also provide automotive repair services.

Draft

413 - Retail - Nonstore retailers	Industries in the Nonstore Retailers subsector retail merchandise using methods, such as the broadcasting of infomercials, the broadcasting and publishing of direct-response advertising, the publishing of paper and electronic catalogs, door-to-door solicitation, in-home demonstration, selling from portable stalls and distribution through vending machines. Establishments in this subsector include mail-order houses, vending machine operators, home delivery sales, door-to-door sales, party plan sales, electronic shopping, and sales through portable stalls (e.g., street vendors, except food). Establishments engaged in the direct sale (i.e., nonstore) of products, such as home heating oil dealers and newspaper delivery service providers are included in this subsector.
417 - Truck transportation	This industry comprises establishments primarily engaged in providing local general freight trucking. General freight trucking establishments handle a wide variety of commodities, generally palletized and transported in a container or van trailer. Local general freight trucking establishments usually provide trucking within a metropolitan area which may cross state lines. Generally the trips are same-day return.
419 - Pipeline transportation	This industry comprises establishments primarily engaged in the pipeline transportation of crude oil.
420 - Scenic and sightseeing transportation and support activities for transportation	This industry comprises establishments primarily engaged in providing scenic and sightseeing transportation on land, such as sightseeing buses and trolleys, steam train excursions, and horse-drawn sightseeing rides. The services provided are usually local and involve same-day return to place of origin.
441 - Monetary authorities and depository credit intermediation	This industry comprises establishments primarily engaged in performing central banking functions, such as issuing currency, managing the Nation's money supply and international reserves, holding deposits that represent the reserves of other banks and other central banks, and acting as a fiscal agent for the central government.
447 - Other real estate	This industry comprises establishments primarily engaged in acting as lessors of buildings (except miniwarehouses and self-storage units) that are not used as residences or dwellings. Included in this industry are: (1) owner-lessors of nonresidential buildings; (2) establishments renting real estate and then acting as lessors in subleasing it to others; and (3) establishments providing full service office space, whether on a lease or service contract basis. The establishments in this industry may manage the property themselves or have another establishment manage it for them.
448 - Tenant-occupied housing	This industry comprises establishments primarily engaged in acting as lessors of buildings used as residences or dwellings, such as single-family homes, apartment buildings, and town homes. Included in this industry are owner-lessors and establishments renting real estate and then acting as lessors in subleasing it to others. The establishments in this industry may manage the property themselves or have another establishment manage it for them.
449 - Owner-occupied dwellings	This industry comprises establishments primarily engaged in acting as lessors of buildings used as residences or dwellings, such as single-family homes, apartment buildings, and town homes. Included in this industry are owner-lessors and establishments renting real estate and then acting as lessors in subleasing it to others. The establishments in this industry may manage the property themselves or have another establishment manage it for them.
455 - Legal services	This industry comprises offices of legal practitioners known as lawyers or attorneys (i.e., counselors-at-law) primarily engaged in the practice of law. Establishments in this industry may provide expertise in a range or in specific areas of law, such as criminal law, corporate law, family and estate law, patent law, real estate law, or tax law.
457 - Architectural, engineering, and related services	This industry comprises establishments primarily engaged in planning and designing residential, institutional, leisure, commercial, and industrial buildings and structures by applying knowledge of design, construction procedures, zoning regulations, building codes, and building materials.
459 - Custom computer programming services	This U.S. industry comprises establishments primarily engaged in writing, modifying, testing, and supporting software to meet the needs of a particular customer.

Draft

462 - Management consulting services	This U.S. industry comprises establishments primarily engaged in providing operating advice and assistance to businesses and other organizations on administrative management issues, such as financial planning and budgeting, equity and asset management, records management, office planning, strategic and organizational planning, site selection, new business start-up, and business process improvement. This industry also includes establishments of general management consultants that provide a full range of administrative, human resource, marketing, process, physical distribution, logistics, or other management consulting services to clients.
464 - Scientific research and development services	This U.S. industry comprises establishments primarily engaged in conducting nanotechnology research and experimental development. Nanotechnology research and experimental development involves the study of matter at the nanoscale (i.e., a scale of about 1 to 100 nanometers). This research and development in nanotechnology may result in development of new nanotechnology processes or in prototypes of new or altered materials and/or products that may be reproduced, utilized, or implemented by various industries.
468 - Marketing research and all other miscellaneous professional, scientific, and technical services	This industry comprises establishments primarily engaged in systematically gathering, recording, tabulating, and presenting marketing and public opinion data.
469 - Management of companies and enterprises	This U.S. industry comprises legal entities known as bank holding companies primarily engaged in holding the securities of (or other equity interests in) companies and enterprises for the purpose of owning a controlling interest or influencing the management decisions of these firms. The holding companies in this industry do not administer, oversee, and manage other establishments of the company or enterprise whose securities they hold.
472 - Employment services	This U.S. industry comprises establishments primarily engaged in listing employment vacancies and in referring or placing applicants for employment. The individuals referred or placed are not employees of the employment agencies.
476 - Services to buildings	This industry comprises establishments primarily engaged in exterminating and controlling birds, mosquitoes, rodents, termites, and other insects and pests (except for crop production and forestry production). Establishments providing fumigation services are included in this industry.
483 - Offices of physicians	This U.S. industry comprises establishments of health practitioners having the degree of M.D. (Doctor of Medicine) or D.O. (Doctor of Osteopathy) primarily engaged in the independent practice of general or specialized medicine (except psychiatry or psychoanalysis) or surgery. These practitioners operate private or group practices in their own offices (e.g., centers, clinics) or in the facilities of others, such as hospitals or HMO medical centers.
490 - Hospitals	This industry comprises establishments known and licensed as general medical and surgical hospitals primarily engaged in providing diagnostic and medical treatment (both surgical and nonsurgical) to inpatients with any of a wide variety of medical conditions. These establishments maintain inpatient beds and provide patients with food services that meet their nutritional requirements. These hospitals have an organized staff of physicians and other medical staff to provide patient care services. These establishments usually provide other services, such as outpatient services, anatomical pathology services, diagnostic X-ray services, clinical laboratory services, operating room services for a variety of procedures, and pharmacy services.
509 - Full-service restaurants	This U.S. industry comprises establishments primarily engaged in providing food services to patrons who order and are served while seated (i.e., waiter/waitress service) and pay after eating. These establishments may provide this type of food service to patrons in combination with selling alcoholic beverages, providing carryout services, or presenting live nontheatrical entertainment.

Draft

510 - Limited-service restaurants	This U.S. industry comprises establishments primarily engaged in providing food services (except snack and nonalcoholic beverage bars) where patrons generally order or select items and pay before eating. Food and drink may be consumed on premises, taken out, or delivered to the customer's location. Some establishments in this industry may provide these food services in combination with selling alcoholic beverages.
511 - All other food and drinking places	Industries in the Food Services and Drinking Places subsector prepare meals, snacks, and beverages to customer order for immediate on-premises and off-premises consumption. There is a wide range of establishments in these industries. Some provide food and drink only; while others provide various combinations of seating space, waiter/waitress services and incidental amenities, such as limited entertainment. The industries in the subsector are grouped based on the type and level of services provided. The industry groups are full-service restaurants; limited-service eating places; special food services, such as food service contractors, caterers, and mobile food services; and drinking places.
512 - Automotive repair and maintenance, except car washes	This U.S. industry comprises establishments primarily engaged in replacing, repairing, and/or tinting automotive vehicle glass, such as passenger car, truck, and van glass.
534 - Other local government enterprises	The Public Administration sector consists of establishments of federal, state, and local government agencies that administer, oversee, and manage public programs and have executive, legislative, or judicial authority over other institutions within a given area.

Corporate Profile

London Moeder Advisors

REPRESENTATIVE SERVICES

Market and Feasibility Studies	Development Services	Litigation Consulting
Financial Structuring	Fiscal Impact	Workout Projects
Asset Disposition	Strategic Planning	MAI Valuation
Government Processing	Capital Access	Economic Analysis

London Moeder Advisors (formerly The London Group) was formed in 1991 to provide real estate advisory services to a broad range of clientele. The firm principals, Gary London and Nathan Moeder, combine for over 60 years of experience. We have analyzed, packaged and achieved capital for a wide variety of real estate projects. Clients who are actively pursuing, developing and investing in projects have regularly sought our advice and financial analysis capabilities. Our experience ranges from large scale, master planned communities to urban redevelopment projects, spanning all land uses and development issues of all sizes and types. These engagements have been undertaken principally throughout North America and Mexico.

A snapshot of a few of the services we render for both the residential and commercial sectors:

- **Market Analysis** for mixed use, urban and suburban properties. Studies concentrate on market depth for specific products, detailed recommendations for product type, absorption and future competition. It also includes economic overviews and forecasts of the relevant communities.

- **Financial Feasibility Studies** for new projects of multiple types, including condominium, apartment, office, and master-planned communities. Studies incorporate debt and equity needs, sensitivity analyses, rates of return and land valuations.

- **Litigation support/expert witness services** for real estate and financial related issues, including economic damages/losses, valuations, historic market conditions and due diligence. We have extensive deposition, trial, mediation and arbitration experience.

- **Investment studies for firms acquiring or disposing of real estate.** Studies include valuation, repositioning projects and portfolios, economic/real estate forecasts and valuation of partnerships. Often, the commercial studies include the valuation of businesses.

- **Estate Planning services** including valuation of portfolios, development of strategies for disposition or repositioning portfolios, succession planning and advisory services for high net worth individuals. We have also been involved in numerous marriage dissolution assignments where real estate is involved.

- **Fiscal Impact, Job Generation and Economic Multiplier Effect Reports**, traditionally prepared for larger commercial projects and in support of Environmental Impact Reports. We have been retained by both developers and municipalities for these reports. The studies typically relate to the tax revenues and employment impacts of new projects.

London Moeder Advisors also draws upon the experience of professional relationships in the development, legal services, financial placement fields as well as its own staff. Clients who are actively investigating and investing in apartment projects, retail centers, commercial projects, mixed use developments and large master plans have regularly sought our advice and financial analysis capabilities.

Contact Information

This analysis was prepared by London Moeder Advisors commissioned by New Leaf Energy.

Research for this project was completed in September 2024. Conclusions and recommendations are strictly those of London Moeder Advisors. Users of this information should recognize that assumptions and projections contained in this report *will* vary from the actual experience in the marketplace. Therefore, London Moeder Advisors is not responsible for the actions taken or any limitations, financial or otherwise, of property owners, investors, developers, lenders, public agencies, operators or tenants.

This assignment was completed by the staff of London Moeder Advisors. **Nathan Moeder**, Principal, served as project director. **Robert Martinez**, Senior Analyst, conducted analysis and prepared exhibits in this report. **Gary London,** Senior Principal, provided strategic consultation, editing and recommendations. For further information or questions contact us at:

3.11 Soils

This section describes the potential effects the construction and operation that the Seahawk Battery Energy Storage System (BESS) Project (project) may have on soil resources at and in the vicinity of the project site.

The proposed project would consist of a 200-megawatt BESS facility using lithium-iron phosphate batteries installed in racks inside of prefabricated energy storage containers. The project would include components such as an operations and maintenance building, an on-site collector substation, a fire protection system, a noise wall, and Supervisory Control and Data Acquisition (SCADA). The project would interconnect from the on-site collector substation to the adjacent Pacific Gas and Electric Company (PG&E) Green Valley Substation via a 115-kilovolt generation interconnection (gen-tie) transmission line. The line would be installed underground from the project substation to the Point of Change of Ownership at an overhead riser pole on PG&E parcel, and an overhead generation interconnection line would connect to the Point of Interconnection at the PG&E Green Valley Substation.

The information presented is based on a site-specific geotechnical evaluation and readily available resources provided online. This evaluation of soils resources includes the following elements:

- Section 3.11.1 describes the existing environment that could be affected, including existing soil uses, wetlands, soil mapping, erosion, and other significant soil characteristics.
- Section 3.11.2 identifies potential environmental impacts that may result from project construction, operation, maintenance, and decommissioning.
- Section 3.11.3 discusses potential cumulative effects.
- Section 3.11.4 identifies project design mitigation measures that would be implemented to avoid or minimize potentially significant impacts during project construction, operation, and maintenance.
- Section 3.11.5 presents laws, ordinances, regulations, and standards applicable to soils resources.
- Section 3.11.6 identifies regulatory agency contacts.
- Section 3.11.7 describes permits required for the project related to soils resources.
- Section 3.11.8 provides references used to develop this section.

The following environmental setting and impact evaluation is based in part on the following project-specific technical reports, included as appendices to this application:

- Appendix 2A – Site Plan Package
- Appendix 3.4A – Geotechnical Engineering Report (Haley Aldrich 2025)

The project's Geotechnical Engineering Report (Appendix 3.4A) provides information and geotechnical engineering recommendations relative to the following: subsurface soil conditions; groundwater conditions; seismic site classification per the California Building Code (CBC); site preparation and earthwork; foundation and pavement design and construction; ground improvement recommendations; gravel access road design; stormwater infiltration; and corrosion potential.

The Geotechnical Engineering Report was supported by test borings, electrical resistivity testing, laboratory testing, and engineering analysis. Specifically, geotechnical analysis included the following:

- One mud rotary boring (B-1) to a depth of 51.5 feet below ground surface (bgs) and six cone penetration tests (CPTs) evaluated subsurface conditions across the project site. One CPT (designated CPT-1) was advanced to a depth of approximately 100 feet bgs, and five CPTs (designated CPT-2 through CPT-6) were advanced to depths between approximately 30.6 and 34.4 feet bgs. The CPT explorations included tests to interpret the approximate depth to groundwater;.
- Shear wave velocity testing was performed to a depth of 100 feet bgs at CPT-1 to inform seismic site classification.
- Disturbed soil samples were collected from near-surface soils.
- Field electrical resistivity measurements were collected.
- One field infiltration test (IT-1) was performed in the western portion of the project site to measure suitability for on-site infiltration feasibilities.
- Samples collected at the project site were submitted to geotechnical laboratory testing, including testing for thermal resistivity, electrical resistivity, and corrosivity properties.

A summary of the soils evaluation is provided in the table below.

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
1) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
2) Be located on expansive soil, as defined in Section 1803.5.3 of the California Building Code, creating substantial direct or indirect risks to life or property?	☐	☐	☒	☐
3) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of farmland to non-agricultural use?	☐	☐	☒	☐
4) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☐	☐	☒	☐

3.11.1 Affected Environment

This subsection describes on-site soils with respect to U.S. Department of Agriculture Natural Resources Conservation Service (NRCS) soil map units, potential for soil loss and erosion, and other significant soil characteristics.

3.11.1.1 NRCS Soil Map Units

A description of the surficial soils within the proposed project site was developed using the U.S. Department of Agriculture NRCS Web Soil Survey (USDA 2025a). As illustrated in Figure 3.11-1, Soils, the project site is underlain primarily by the following: Watsonville loam, 2% to 15 % slopes (covering 55.3% of the site); Pinto loam 2% to 9% slopes (covering 41.3% of the site); Pinto loam 9% to 15% slopes (covering 2.4% of the site), Diablo clay 5% to 25% slopes (covering 0.4% of the site); Pinto loam 0% to 2% slopes (covering 0.4% of the site); and Elder sandy loam 0% to 2% to 9% slopes (covering 0.1% of the site).

The Watsonville loam is classified as farmland of statewide importance and is formed from alluvium on marine terraces. These soils are somewhat poorly drained and typically composed of loam in the first 18 inches, clay from 18 to 39 inches, and sandy clay loam from 39 to 63 inches below ground surface. The Watsonville series has a land capability rating of 3, which is classified as “soils have severe limitations that reduce the choice of plants or require special conservation practices, or both” and a subclass of e which is “made up of soils for which the susceptibility to erosion is the dominant problem or hazard affecting their use. Erosion susceptibility and past erosion damage are the major soil factors that affect soils in this subclass” (USDA 2025b).

The Pinto loam series are moderately well-drained soils that are formed on alluvial fans and terraces. These soils are also considered prime farmland if irrigated. If not irrigated, they have a land capability classification of 3e, same as the Watsonville loam. Under irrigation, they are classified as 2e. Class 2 soils are defined as “soils [which] have moderate limitations that reduce the choice of plants or require moderate conservation practices” (USDA 2025b). The typical profile for Pinto loams are loams for the first 21 inches and then sand clay loam down to 65 inches below ground surface (USDA 2025a).

The Diablo Clay soils are generally found on hillslopes and mountain slopes from weathered calcareous shale. They are well drained and have a land capability rating of 4, which is defined as having “very severe limitations that reduce the choice of plants or that require very careful management.” Elder sandy loam are well drained soils composed of mixed alluvium and found in flood plains and alluvial fans. They have a land classification of 1 if irrigated and 3c if not. Land classification 1 is defined as “soils have slight limitations that restrict their use”. Subclass c is defined as “made up of soils for which the climate (the temperature or lack of moisture) is the major hazard or limitation affecting their use”.

According to soil survey data from the Natural Resources Conservation Service, the soils on site have a range of potential for linear extensibility, which is an approximation of the potential for exhibiting expansive properties (i.e., volumetric changes that occur with changes in moisture content), from low (Elder sandy loam), to moderate (Pinto loam), to high (Watsonville loam), to very high (Diablo Clay) (USDA 2025a).

3.11.1.2 Potential for Soil Loss and Erosion

Soil loss and erosion potential are greatly affected by the presence of vegetation, slope grades, soil composition and gradation, and weather patterns. Regions with sparse to no vegetation exhibit erosion more readily than areas with grasses, shrubbery, and other plants as they help in slowing the overland flow and holding the soil together. Areas with steeper slopes typically experience higher rates of erosion and soil loss than level slopes due to the higher flow velocity at which the stormwater runoff would travel. Erosion presents hazards to structures because it removes soils, which can undermine foundational elements, and transports and deposits the eroded material at other locations, which could cover roads, fill in reservoirs, and cause other impairments to infrastructure.

The soil erodibility factor, or K-value, of the Universal Soil Loss Equation and Revised Universal Soil Loss Equation, was used to assess the project site's vulnerability to erosion by surface water run-off (sheet and rill erosion). The K-value is a measure of the susceptibility of soil particles to detach and transport by rainfall and runoff. K-values range from 0.02 to 0.69, and other factors being equal, the higher the value, the more susceptible the soil is to sheet and rill erosion by surface water flows (USDA 2025b). Soil erodibility and the associated K-factor ranges are presented in Table 3.11-1 below.

Table 3.11-1. Soil Erodibility and K-Factor Ranges

K-Factor	
0.02 – 0.2	Low
0.25 – 0.4	Moderate
0.45 – 0.69	High

Source: USDA NRCS 2025.

As discussed in Section 3.11.1.1, the project site is composed of several soil map units, all of which have a K-factor within the low or moderate range. The K-factor for the soils within the project site range from 0.17 – 0.43 with the highest potential associated with the Watsonville loams.

3.11.1.3 Expansive Soils

Expansive soils have the potential to shrink and swell with variations in saturation, which could cause ground instability in the form of differential settlement, which can damage building and structural foundations. Expansive soils are typically clay-rich or clay-dominant soils. Section 1803.5.3 of the CBC describes the standards for classifying expansive soils. Soils meeting all four of the following provisions shall be considered to be expansive: If the test prescribed in Item 4 is conducted, tests to show compliance with Items 1, 2, and 3 shall not be required.

1. Plasticity index of 15 or greater, determined in accordance with ASTM D4318.
2. More than 10% of the soil particles pass a No.200 sieve (75 micrometers), determined in accordance with ASTM D422.
3. More than 10% of the soil particles are less than 5 micrometers in size, determined in accordance with ASTM D422.
4. Expansion index greater than 20, determined in accordance with ASTM D4829.

According to the Geotechnical Engineering Report (Appendix 3.4A) prepared for the proposed project site, the near-surface soils across the majority of the site (those within the upper approximately 5 feet bgs) generally consist of sandy clay soils that have been disturbed by agricultural activities and are expected to have low to moderate expansive potential. The report also identified the soils as requiring site preparations (i.e., scarification or excavation of near surface soils and recompaction) prior to construction of shallow foundations. Earthwork activities including compaction of near surface soils would be included in site preparation work as part of implementing the geotechnical recommendations in Appendix 3.4A.

3.11.1.4 Liquefaction Risk

Please see the liquefaction discussion included in Section 3.4, Geological Hazards and Resources.

3.11.1.5 Potential for Shallow Groundwater

The geotechnical investigation included conducting CPT that allowed short-term groundwater observations to be made while advancing the CPT probes (Appendix 3.4A). Groundwater was observed as ranging between 10 to 16 feet bgs. These observations represent groundwater conditions at the time of field exploration and may not be indicative of other times, or at other locations.

Groundwater level fluctuations may occur due to seasonal variations in the amount of rainfall, runoff, and other factors not evident at the time the borings are performed. Therefore, as expected, groundwater levels during construction or at other times in the life of the structure may be higher or lower than expected.

According to data collected from the U.S. Geological Survey National Water Information System from a nearby well, located on the project site in State Well Number 011S002E28F001M, historic groundwater levels during the 1970s into the early 1980s, were recorded at between 87 and 138 feet bgs. However, these readings may reflect a depressed water level due to active groundwater pumping. Recent publicly available data (within the last 20 years) is not available within a 1-mile radius from the site boundary. However, data collected during geotechnical investigation at the site observed groundwater at between approximately 10 and 16 feet bgs (Appendix 3.4A).

3.11.1.6 Potential for Shallow Bedrock

Soil borings conducted as part of the Geotechnical Engineering Report were drilled across the project site in the BESS areas, operations and maintenance building area, and generation interconnection areas. The borings were advanced to a maximum depth of 100 feet bgs, as shown in Appendix 3.4A. None of these soil borings encountered bedrock.

3.11.1.7 Soil Contamination

A Phase I Environmental Site Assessment (Phase I) was prepared for the proposed project site (Appendix 3.5A; EBI Consulting 2025). According to the findings of the Phase I, there was no evidence of recognized environmental conditions, historical recognized environmental conditions, controlled recognized environmental conditions, vapor encroachment conditions, or significant data gaps in connection with the proposed project site (Appendix 3.5A). However, it was noted that the project site has been used for agricultural purposes as an apple orchard and as a result is presumed to have used agricultural chemicals in the past (e.g., herbicides, pesticides, and fertilizers) (Appendix 3.5A). As a result, the Phase I report identified this land usage history as a business environmental risk and that there is a potential to encounter legacy agricultural chemicals in near surface soils. Recommendations were made for a Soil Management Plan to be implemented during any future grading or earthwork activities at the site.

3.11.2 Impact Analysis

The following sections describe the potential environmental effects on soils near the project site during the construction and operation of the proposed project.

3.11.2.1 Methodology

The information presented is based on a site-specific geotechnical evaluation, engineering plans, Phase I Environmental Site Assessments, and readily available resources provided online. Potential direct and indirect project impacts related to soils were evaluated against the California Environmental Quality Act (CEQA) significance

criteria and are discussed below. The impact analysis evaluates potential project impacts during project construction, operation, and decommissioning.

3.11.2.2 Impact Evaluation Criteria

CEQA Guidelines Appendix G is a screening tool, not a method for setting thresholds of significance. Appendix G is typically used in the Initial Study phase of the CEQA process, asking a series of questions. The purpose of these questions is to make a determination as to whether a project requires an environmental impact report, a Mitigated Negative Declaration, or a Negative Declaration. As the Governor's Office of Planning and Research stated, "Appendix G of the Guidelines lists a variety of potentially significant effects but does not provide a means of judging whether they are indeed significant in a given set of circumstances."

The answers to the Appendix G questions are not determinative of whether an impact is significant or less than significant. Nevertheless, the questions presented in CEQA Guidelines Appendix G are instructive. With respect to Geology and Soils, Appendix G asks, in part, whether the project would:

- Result in substantial soil erosion or the loss of topsoil.
- Be located on expansive soil, as defined in Section 1803.5.3 of the CBC, creating substantial direct or indirect risks to life or property.
- Involve other changes in the existing environment which, due to their location or nature, could result in conversion of farmland to non-agricultural use/
- Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water.

3.11.2.3 CEQA Appendix G Assessment Criteria

Criterion 3.11-1 Would the project result in substantial soil erosion or the loss of topsoil?

Less than Significant. Project construction would include grading and earthwork activities that could expose soils to the effects of wind and water erosion if not managed appropriately. However, the contractor would be required to comply with Santa Cruz County grading permit requirements, as well as preparation and implementation of a stormwater pollution prevention plan (SWPPP), in accordance with the National Pollutant Discharge Elimination System (NPDES) General Permit for Discharges of Storm Water Associated with Construction Activity and Land Disturbance Activities. The site-specific SWPPP would be prepared prior to earthwork activities and would be implemented during project construction. The SWPPP would include best management practices (BMPs) and erosion control measures to prevent pollution in stormwater discharge, which are also effective in minimizing soil erosion and loss of topsoil.

The California Energy Commission would also require the project applicant to implement a drainage, erosion, and sediment control plan to reduce the potential impact of run-off during construction, operation, maintenance, and decommissioning. Erosion prevention and sediment control facilities would be incorporated into the final grading plan, which would control and contain erosion-induced silt deposits and provide for the safe discharge of silt-free stormwater off site after rough grading has been completed. All erosion control measures would be maintained until disturbed areas are stabilized. Grading would be completed in conformance with the Santa Cruz County Grading Ordinance and recommendations in the Geotechnical Engineering Report (Appendix 3.4A). Site monitoring would involve inspections to ensure that

the BMPs required by the project-specific SWPPP and drainage, erosion, and sediment control plan are properly maintained to reduce the risk of runoff to an adequate level. Implementation of the project-specific SWPPP and drainage, erosion, and sediment control plan would ensure that downstream water bodies are not affected by sediment transport.

Typical BMPs that may be employed during construction include erosion/sediment control measures such as silt fences, fiber rolls, gravel bags, soil stockpile stabilization measures, and dust controls, consistent with the Construction General Permit. The SWPPP would be subject to review and comment by the County and review and approval by the California Energy Commission. Through compliance with these existing regulations, the project would not result in any significant impacts related to soil erosion during the construction phase. Additionally, during operations, the areas that were temporarily disturbed would be revegetated, and drainage control features would be implemented to ensure that there is no contact with bare soil surfaces (see further discussion of drainage control requirements in Section 3.15, Water Resources). Therefore, construction and operations project impacts related to soil erosion or the loss of topsoil are considered **less than significant**.

Criterion 3.11-2 Would the project be located on expansive soil, as defined in Section 1803.5.3 of the California Building Code, creating substantial direct or indirect risks to life or property?

Less than Significant. As discussed in Section 3.4, Geological Hazards and Resources, the project site is underlain primarily by medium dense to very dense sandy soils (Appendix 3.4A). According to soil data from the Natural Resources Conservation Service, the project site soils are mapped with soil units that are classified with a range of low to very high potential for experiencing volumetric changes due to changes in moisture content (USDA 2025b). Provided that the recommendations of the report are incorporated into the proposed construction site preparations and site design, which is consistent with building code requirements, the geotechnical investigation that was prepared for the project site determined that the proposed construction would not be subjected to any hazard from local conditions. These recommendations include replacing surface soils in some areas (e.g., the proposed operations and maintenance area) with engineered fills to ensure that the proposed improvements do not result in damage or injury as a result of any geotechnical hazards present, including expansive soils. Any use of imported engineered fill materials would be required to adhere to existing building code requirements, which include specifications for ensuring engineered fills meet minimum low expansion specifications (ASTM D4829). With the implementation of project-specific geotechnical recommendations pertaining to site preparations and geotechnical characteristics of site soils and fill materials, as well as compliance with Santa Cruz County Building Code requirements, the proposed project would not result in substantial direct or indirect risks to life or property from expansive soils. Impacts would be **less than significant.**

Criterion 3.11-3 Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of farmland to non-agricultural use?

Less than Significant. The project site has been used for agricultural purposes as an apple orchard since the 1920s (Appendix 3.4A). The majority of the site would continue to operate as an orchard with the exception of the portion of the site where the proposed BESS facility would be located. The impacts of farmland conversion are considered **less than significant with mitigation**. Refer to Section 3.6, Land Use, for further information and detailed analysis of this topic.

Criterion 3.11-4 Would the project have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?

No Impact. The project does not include construction or use of a septic wastewater system or alternative. An existing on-site structure would be used as the operations and maintenance building. This structure is connected to the city sewer system. Therefore, there would be **no impact** related to this criterion.

3.11.3 Cumulative Effects

A cumulative impact refers to a proposed project's incremental effects together with other closely related past, present, and reasonably foreseeable future projects whose impacts may compound or increase the incremental effects of the proposed project (California Public Resources Code 21083; Title 14, California Code of Regulations, 15064(h)], 15065, 15130, and 15355).

Risks related to soils are typically localized in nature because they tend to be related to on-site conditions or conditions caused by a project's construction. Projects that would have the potential to be considered in a cumulative context with the proposed project's incremental contribution, and that are included in the analysis of cumulative impacts relative to soils resources, are identified in Chapter 3, Environmental Analysis, Table 3-1, Cumulative Projects. Cumulative projects were chosen based on proximity to the proposed project. These projects include residential, commercial, and industrial development. The majority of the cumulative projects would involve both construction and operational activities. Nearby cumulative projects are appropriate in the context of soils resources cumulative impacts because generally there needs to be a direct nexus and similar soil conditions for a synergistic impact to occur, such as site modifications at nearby projects combining to destabilize soils. Currently, there is not a known existing significant cumulative impact related to soils within this geographic scope.

Although construction and decommissioning activities have the potential to result in erosion on the project site; adherence to the construction SWPPP; drainage, erosion, and sediment control plan; recommendations in the Geotechnical Engineering Report (Appendix 3.4A); and Santa Cruz County grading and building requirements would mitigate erosion impacts to less-than-significant levels. Other cumulative scenario projects would be required to adhere to similar requirements, thereby minimizing cumulative scenario erosion impacts. Specifically, all planned projects in the vicinity of the proposed project would be subject to environmental review and would be required to conform to the Santa Cruz County grading ordinance. With implementation of avoidance and mitigation measures and other grading and building requirements, the proposed project would not contribute to cumulative impacts for soils. Impacts of the proposed project would be cumulatively considerable if the project, in combination with related projects, would result in significant cumulative impacts. However, the effects of the cumulative projects are not of a nature to cause cumulatively significant effects from soil resources impacts, because such impacts are site-specific and would only have the potential to combine with impacts of the proposed project if they occurred in the same location. As a result, cumulative impacts related to soils resources would be **less than significant**.

3.11.4 Mitigation Measures

Because the project design would avoid or minimize potentially significant effects and would therefore not cause any significant adverse impacts to soils resources, no mitigation measures beyond the project's design are necessary.

3.11.5 Laws, Ordinances, Regulations, and Standards

Federal, state, and local laws, ordinances, regulations, and standards applicable to soils resources are discussed and summarized in Table 3.11-2.

Table 3.11-2. LORS Applicable to Soils Resources

Jurisdiction	LORS	Applicability	Project Conformity	Opt-In Application Reference
Federal	CWA/Water Pollution Control Act. 1972, amended by Water Quality Act of 1987 P.L. 100-4	Regulates stormwater and non-stormwater discharges from construction and industrial activities	**Yes.** Project grading and construction would be completed in compliance with the NPDES Construction General Permit, which would fulfill CWA requirements with respect to erosion and water quality.	Criterion 3.11-1 Section 3.11.5.2
Federal	USDA NRCS National Engineering Handbook, Sections 2 and 3	Provides standards for soil conservation during planning, design, and construction activities	**Yes.** Project grading would include earthwork activities that provide relatively level surfaces for proposed construction of structures and removing any soils unsuitable for construction and may be reused on site for landscaping. All grading would be done consistent with building code requirements.	Criterion 3.11-1 Criterion 3.11-2 Section 3.11.5.1
State	Section 1803.5.3 of the California Building Code	Regulations for soils and foundations, including standards for defining expansive soils	**Yes.** Adherence to existing regulatory requirements, which requires testing and structural design with respect to potentially expansive soils, would fulfill the requirements of the California Building Code.	Criterion 3.11-2 Section 3.11.5.2

Table 3.11-2. LORS Applicable to Soils Resources

Jurisdiction	LORS	Applicability	Project Conformity	Opt-In Application Reference
Local	California Building Standards Code (CCR Title 24, Part 2, Chapters 18 and 18A) (2022)	Sets the requirements for general building design and construction	**Yes.** All proposed improvements would be required to adhere to the requirements of the California Building Code with local amendments by Santa Cruz County, as applicable.	Criterion 3.11-2 Section 3.11.5.2
Local	Santa Cruz County Code of Ordinances, Chapter 16.20– Grading Regulations Outside Coastal Zone and Chapter 16.22 Erosion Control	Standards for grading and water quality, including permit requirements which include preparation of an erosion control plan	**Yes.** Project grading and construction would comply with Santa Cruz County grading regulations with respect to erosion control during grading and construction through compliance with the Building and Grading Permit requirements.	Criterion 3.11-1 Section 3.11.5.3
Local	Santa Cruz County Code Chapter 7.79	Chapter 7.79 – Runoff and Pollution Control provides the stormwater standards to comply with the requirements of the NPDES Phase II MS4 Permit for stormwater and non-stormwater discharges.	**Yes.** The project's stormwater management features would be designed consistent with the County's manual stormwater requirements to ensure consistency with the NPDES Phase II MS4 Permit.	Criterion 3.15-1 Criterion 3.15-3 Criterion 3.15-5 Section 3.15.5.3
Local	Santa Cruz County Code Chapter 7.79	Chapter 7.79 – Runoff and Pollution Control provides the stormwater standards to comply with the requirements of the NPDES Phase II MS4 Permit for stormwater and non-stormwater discharges.	**Yes.** The project's stormwater management features would be designed consistent with the County's manual stormwater requirements to ensure consistency with the NPDES Phase II MS4 Permit.	Criterion 3.15-1 Criterion 3.15-3 Criterion 3.15-5 Section 3.15.5.3

Table 3.11-2. LORS Applicable to Soils Resources

Jurisdiction	LORS	Applicability	Project Conformity	Opt-In Application Reference
Local	Santa Cruz County Code Chapter 7.79	Chapter 7.79 – Runoff and Pollution Control provides the stormwater standards to comply with the requirements of the NPDES Phase II MS4 Permit for stormwater and non-stormwater discharges.	**Yes.** The project's stormwater management features would be designed consistent with the County's manual stormwater requirements to ensure consistency with the NPDES Phase II MS4 Permit.	Criterion 3.15-1 Criterion 3.15-3 Criterion 3.15-5 Section 3.15.5.3
Local	Santa Cruz County General Plan	Goals and policies to support the agricultural economy and protect agricultural lands	**Yes.** Project design and construction would comply with the County's General Plan goal with respect to agricultural soils. Please also see Section 3.6, Land Use, for additional discussion of agricultural land.	Criterion 3.15-3 Section 3.15.5.3

Note: CWA = Clean Water Act; LORS = laws, ordinances, regulations, and standards; NPDES = National Pollutant Discharge Elimination System; CWA = Clean Water Act; NRCS = Natural Resources Conservation Service; MS4 = Municipal Separate Storm Sewer Systems.

3.11.5.1 Federal

NRCS (1983), National Engineering Handbook Sections 2 and 3

Sections 2 and 3 of the USDA NRCS National Engineering Handbook provide standards for soil conservation during planning, design, and construction activities. Section 2 describes soil properties, including derivation of sediments, particle characteristics, size distribution of sediments, bulk properties, and texture. Section 3 describes problems affecting the evaluation of erosion and sediment-storage damages, formulation of programs for reducing these damages, and sediment-storage design criteria for structural works of improvement for the beneficial use, control, and conservation of soil and water resources.

Project grading would include earthwork activities that provide relatively level surfaces for proposed construction of structures, and any soils removed as unsuitable for construction and may be reused on site for landscaping. All grading would be done consistent with building code requirements.

3.11.5.2 State

California Environmental Quality Act

CEQA requires state and local government agencies to inform decision makers and the public about the potential environmental impacts of the project and to reduce environmental impacts to the extent feasible. CEQA Guidelines Appendix G includes criteria for evaluating potential impacts related to soils.

Stormwater Construction General Permit

The five-member State Water Resources Control Board (SWRCB) allocates water rights, adjudicates water right disputes, develops statewide water protection plans, establishes water quality standards, and guides the nine Regional Water Quality Control Boards in the major watersheds of the state. The joint authority of water allocation and water quality protection enables the SWRCB to provide comprehensive protection for California's waters. Effective September 1, 2023, Construction Stormwater General Permit Order 2022-0057-DWQ, also known as the Construction General Permit, supersedes SWRCB Order No. 2009-009-DWQ, as amended by 2010-0014-DWQ and 2012-0006-DWQ. The order requires that, prior to beginning any construction activity, the permit applicant obtain coverage under the Construction General Permit by preparing and submitting to the SWRCB a Permit Registration Document that includes a Notice of Intent, SWPPP, and other compliance related documents required by the Construction General Permit. Regulating many stormwater discharges under one general permit greatly reduces the administrative burden associated with permitting individual stormwater discharges. Construction activities subject to the NPDES Construction General Permit include clearing, grading, and disturbances to the ground (e.g., stockpiling or excavating), which result in soil disturbances of at least 1 or more acres of land surface, or that are part of a common plan of development or sale that disturbs more than 1 acre of land surface.

Project grading and construction would be completed in compliance with the NPDES Construction General Permit, which would fulfill Clean Water Act requirements with respect to erosion and water quality.

Table 18-1-B of the Uniform Building Code (International Code Council, 1994)

Chapter 18 of the International Building Code describe the allowable soil-bearing capacity of different types of soils, including expansive soils. However, the Uniform Building Code has been superseded by the CBC, which establishes minimum standards to safeguard the public health, safety, and general welfare through structural strength, means of egress facilities, and general stability by regulating and controlling the design, construction, quality of materials, use and occupancy, location, and maintenance of all building and structures within its jurisdiction. The CBC is based on the International Building Code published by the International Code Conference. The CBC contains California amendments based on the American Society of Civil Engineers Minimum Design Standards 7-05. Expansive soils are addressed in CBC Chapter 18, Soils and Foundations.

Project adherence to existing regulatory requirements, which requires testing and structural design with respect to potentially expansive soils, would fulfill CBC requirements.

California Building Standards Code

The California Building Standards Code (CCR Title 24, Part 2, Chapters 18 and 18A) sets the requirements for general building design and construction. State regulations protecting structures from geo-seismic hazards are contained in the California Code of Regulations, Title 24, Part 2 (the CBC). The purpose of the CBC is to establish

minimum standards to safeguard the public health, safety, and general welfare through structural strength, means of egress facilities, and general stability by regulating and controlling the design, construction, quality of materials, use and occupancy, location, and maintenance of all buildings and structures within its jurisdiction. CBC provisions apply to the construction, alteration, movement, replacement, and demolition of every building or structure, or any appurtenances connected or attached to such buildings or structures throughout California.

Project adherence to existing regulatory requirements would fulfill CBC requirements.

3.11.5.3 Local

Santa Cruz County Code of Ordinances

The Santa Cruz County Code of Ordinances (County of Santa Cruz 2025), Chapter 7.79 –Runoff and Pollution Control, sets requirements for stormwater and runoff pollution control during construction activities. Chapter 16.20 – Grading Regulations (Effective Outside Coastal Zone), chapter 16.22 – Erosion Control (Effective Outside Coastal Zone), and Appendix J – Grading, establishes standards for grading, excavation, and earthwork construction, water quality, and the control of runoff from graded sites, including erosion sediments and construction-related pollutants, and plan and permit requirements for development projects within unincorporated Santa Cruz County.

Project grading and construction would comply with Santa Cruz County erosion and sediment control ordinances with respect to erosion control during grading and construction through compliance with the Building and Grading Permit requirements. Project grading and construction would also comply with NPDES Construction General Permit, and operational stormwater drainage control features would comply with Santa Cruz County stormwater requirements.

Santa Cruz County Code Chapter 7.79 Runoff and Pollution Control

Chapter 7.79 of the Santa Cruz County Code addresses runoff and pollution control to comply with the Phase II Municipal General Permit and protect the health, safety, and welfare of the public by protecting the surface and groundwater quality, groundwater recharge, beneficial uses, marine habitats, watershed health, and ecosystems of the receiving waters of the county, including the Monterey Bay, from discharge of pollutants and the adverse effects of hydromodification, and to comply with Federal and state laws concerning stormwater. This chapter requires compliance with industrial and construction NPDES discharge permits, where relevant. Additionally, prior to issuing a County permit under Title 16, Environmental and Resource Protection, a stormwater pollution control plan must be prepared addressing the use of BMPs during construction, including appropriate BMPs from the County Construction Site Stormwater Pollution Control BMP Manual. New development and redevelopment shall also mitigate impacts due to development and implement BMPs per the County Design Criteria. These BMPs include measures to control the volume, runoff rate, and potential pollutant load of stormwater runoff from new development and redevelopment projects; to minimize the generation, transport, and discharge of pollutants; to prevent runoff in excess of predevelopment conditions; and to maintain predevelopment groundwater recharge.

Santa Cruz County Code 16.20, Grading and 16.22, Erosion Control

The County Grading Ordinance, adopted as Chapter 16.20 of the Santa Cruz County Code, sets forth rules and regulations to control all grading, including excavations, earthwork, road construction, dredging, diking, fills, and embankments. It also establishes administrative procedures for issuance of permits and provides for approval of grading plans and inspections. Grading permits require Planning Commission approval for grading in excess of 8,000 cubic yards, or for which an environmental impact report was prepared, or for grading in excess of 1,000 cubic yards

which is visible from a scenic corridor roadway. All other grading permits, including those for agricultural grading, must be approved by the Planning Director, pursuant to Section 16.20.040 and Section 16.20.195 of the Santa Cruz County Code, through a staff-level administrative process. Agricultural grading is defined as any grading which takes place on land designated for commercial agricultural use, as specified in Section 16.50.040; provided, however, that agricultural grading does not include any grading on such lands connected with the construction of access roads or building sites, except greenhouse sites.

It is noted that agricultural grading on less than 20% slopes, as well as vineyards and associated terracing (regardless of slope), does not require a regular grading permit and is instead subject to agricultural grading regulations. However, defined "specialized agricultural activities" such as greenhouses, indoor growing, aquaculture and any cannabis cultivation activities involving more than 100 cubic yards is not considered agricultural grading and requires a regular grading permit, and grading on 20% slopes or more also requires a regular grading permit (August 2018). Specialized agricultural activities also require a regular grading permit rather than a less-specific agricultural grading permit.

A proposed grading plan must be accompanied by an erosion control plan and erosion preventative measures, in accordance with the requirements of the County Erosion Control Ordinance of Santa Cruz County Code Chapter 16.22.

The project would adhere to all grading and erosion control consistent with the County Codes.

Santa Cruz County General Plan

The Santa Cruz County General Plan (County of Santa Cruz 2024) Agriculture, Natural Resources, and Conservation Element includes goals and policies that relate to Soils. The following goals and policies would apply to the proposed project:

Goal ARC-1 Sustaining Agriculture. Support the agricultural economy and protect agricultural lands for current and future generations, preserving commercial agricultural lands for agricultural use and allowing agricultural and other uses on agricultural lands that are not commercially viable.

Project design and construction would comply with the County's General Plan goal with respect to agricultural soils. As further discussed in Section 3.6, Land Use, the project has been sited within the area of the project site that contains poor quality soils as evidenced by poor plant vigor and loss of trees. In addition, future agricultural production on areas of the project site mapped Prime Farmland and with highly suitable soils (i.e., outside where the BESS facility would be located), Mitigation Measure LU-1 would require approximately 32 acres of land within the project parcel mapped as Prime Farmland would be preserved in perpetuity through an agricultural conservation easement. Further, at the end of the facility's useful life, the project would undergo decommissioning in accordance with then-applicable laws, ordinances, regulations, and standards. As part of the decommissioning activities, all site improvements that are no longer in use and cannot be repurposed would be removed from the project site, and the lands would be restored to a substantially similar condition in which they currently exist.

3.11.6 Agencies and Agency Contacts

Applicable permits and agency contacts for soils resources are shown in Table 3.11-3. Building and grading permits from Santa Cruz County would be superseded by the California Energy Commission approval of the project under the Opt-In Program.

Table 3.11-3. Permits and Agency Contacts for Soils Resources

Permit or Approval	Agency Contact	Applicability
NPDES Construction General Permit	Central Coast Regional Water Quality Control Board Documents submitted via SMARTS* 895 Aerovista Place, Suite 101 San Luis Obispo, California 93401 Arwen Wyatt-Mair 805.542.4695 arwen.wyattmair@waterboard.ca.gov	Grading and erosion control
Santa Cruz County Building Permit*	Santa Cruz County Community Development and Infrastructure Environmental Planning 701 Ocean Street, 4th Floor Santa Cruz, California 95060 Matt Machado, Director EnvironmentalPlanningInfo@santacruzcountyca.gov 831.454.2260 Plans submitted through SCC ePlan Review at: http://scceplanreview.santacruzcounty.us/	Building and Grading Permits, including erosion control approvals

Notes: NPDES = National Pollutant Discharge Elimination System; SMARTS = Stormwater Multiple Application and Report Tracking System.
* Building and grading permits from Santa Cruz County would be superseded by California Energy Commission approval of the project under the opt-in program.

3.11.7 Permits and Permit Schedule

The NPDES permit is evaluated in Section 3.15, Water Resources.

3.12 Traffic and Transportation

This section discusses the potential effects on traffic and transportation from the Seahawk Battery Energy Storage System Project (project). The project would consist of a 200-megawatt battery energy storage system facility utilizing lithium-iron phosphate batteries installed in racks inside of prefabricated energy storage containers. The project components would include an operations and maintenance (O&M) building, an on-site collector substation, a fire protection system, a noise mitigation wall, and Supervisory Control and Data Acquisition. The project would interconnect from the on-site collector substation to the adjacent Pacific Gas and Electric Company (PG&E) Green Valley Substation via a 115-kilovolt generation interconnection (gen-tie) transmission line. The line would be installed underground from the project substation to the Point of Change of Ownership at an overhead riser pole on the PG&E parcel, and an overhead line would connect to the Point of Interconnection at the PG&E Green Valley Substation.

This evaluation of traffic and transportation includes the following elements:

- Section 3.12.1 describes nearby transportation facilities that might be affected by the project, including roads, pedestrian and bicycle facilities, public transportation, air, and rail.
- Section 3.12.2 presents the impact analysis.
- Section 3.12.3 presents the cumulative impacts of the project with respect to traffic and transportation.
- Section 3.12.4 presents the mitigation measures.
- Section 3.12.5 describes the laws, ordinances, regulations, and standards (LORS) applicable to traffic and transportation for the project.
- Section 3.12.6 presents the agencies that have jurisdiction over traffic and transportation and specifies the relevant agency contacts.
- Section 3.12.7 describes the permits required for traffic and transportation and a schedule for obtaining the permits.
- Section 3.12.8 provides the references used to prepare this section.

A summary of the traffic and transportation evaluation is provided in the table below.

		Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
Would the project:					
1	Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	☐	☐	☒	☐
2	Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?	☐	☐	☒	☐

		Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact
3	Substantially increase hazards due to geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☒	☐
4	Result in inadequate emergency access?	☐	☐	☒	☐
5	Result in potential impacts to an airport if the proposed project including any linear facility is to be located within four miles of an airport, a planned or proposed airport runway, or an airport runway under construction?	☐	☐	☐	☒
6	Exceed current and projected roadway and intersection level of service before project development, during construction, and during project operation?	☐	☐	☒	☐
7	Result in significantly increased hazards associated with project related hazardous materials to be transported to or from the project site?	☐	☐	☒	☐

3.12.1 Affected Environment

The project site is in unincorporated Santa Cruz County (County), California, approximately 1 mile north of the City of Watsonville and east of the intersection of Minto Road and Green Valley Road. Regional access to the project site is provided primarily by State Route (SR) 1 and SR-152 (Main Street) to the south and east of the project site. The local street system serving the site includes Green Valley Road, Holohan Road, Airport Boulevard, and Minto Road. Figure 3.12-1, Project Site Location, illustrates the local street system serving the project site. A description of the roads serving the site is provided below. The gen-tie route (approximately 0.21 miles in length) would extend from the project substation, cross Minto Road, then continue parallel to the existing Minto Road right-of-way. The gen-tie would then route northwest and continue parallel to the boundaries of the Green Valley Substation until turning east to reach the Point of Interconnection at the PG&E Green Valley Substation.

Access to the project site would be provided via Minto Road to the west of the project site. A 20-foot-wide gravel access road would be constructed from the entrance on Minto Road, throughout the battery energy storage system facility, and to the project substation. The access road would also provide access to up to two temporary construction laydown areas for equipment and material staging, storage, and worker parking during construction. The laydown areas would be located in the western portion of the project site. The gen-tie corridor and its construction laydown area would be adjacent to a portion of the Minto Road right-of-way and would be accessible via Minto Road.

3.12.1.1 Roadways

Characteristics of the existing street system in the project vicinity are described below. Figure 3.12-2 presents the County's existing and planned street typologies (County of Santa Cruz 2024a).

SR-1, near the project site, is a north–south four-lane divided highway south of the project site. SR-1 provides regional access to the project site and is a major connection through Watsonville and the region. Access to and from SR-1 is provided via Airport Boulevard and SR-152.

SR-152 is an east–west, generally two-lane highway that extends over 100 miles from SR-99 in the City of Merced to Watsonville. In Watsonville, SR-152 integrates with the local roadway network and, in the Downtown area, becomes Main Street. Within the unincorporated County lands, SR-152 follows the Santa Cruz Mountains toward the City of Gilroy, where it connects to US 101.

Green Valley Road, in the project vicinity, is a north–south two- to four-lane divided road providing access through the northern part of Watsonville and unincorporated County lands. Class II bikes lanes (on-street painted lanes) are provided on Green Valley Road between Harkins Slough Road to the south and the Watsonville City limits at Holohan Road to the north. Green Valley Road is a designated rural connector in the County's General Plan.

Holohan Road is an east–west two-lane road that runs along the northern Watsonville City limits and adjacent to the Watsonville Municipal Airport. Holohan Road is a designated rural connector in the County's General Plan. There is an existing bike lane on Holohan Road between approximately SR-152 and Green Valley Road. Holohan Road becomes Airport Boulevard west of Green Valley Road.

Airport Boulevard is a north–south two- to four-lane road that runs along the western Watsonville City limits. It provides direct access to SR-1. Airport Boulevard has Class II bike lanes along its entire length. Airport Boulevard becomes Holohan Road east of Green Valley Road.

Minto Road is a two-lane residential street with sidewalks provided on the north side of the road. Minto Road provides direct access to the Green Valley Substation and the project site. East of Meidl Avenue, Minto Road becomes a narrow road, with no sidewalks.

3.12.1.2 Pedestrian and Bicycle Facilities

Sidewalks are provided intermittently within the project vicinity. There are sidewalks along the majority of Green Valley Road south of Holohan Road and, intermittently, north of Holohan Road. Sidewalks are also located along the north side of Minto Road. Class II bike lanes are located on Airport Boulevard, Green Valley Road, and Holohan Road. Figure 3.12-3 presents the existing and planned bicycles facilities in the area.

3.12.1.3 Public Transportation

Transit service in the project area is provided by the Santa Cruz Metropolitan Transit District. Route 1 operates along Airport Boulevard and SR-1, near the project site. Routes 72, 72W, 74S, 75, and 78 operate along Green Valley Road near the project site (Metro 2025). Figure 3.12-4 presents the existing transit facilities in the area, and a description of the transit service is provided below.

Route 1 provides service between downtown Santa Cruz, Soquel, Capitola, Cabrillo College, the Watsonville Municipal Airport, and the Watsonville Transit Center. The route operates on weekdays from 5:40 a.m. to

approximately 12:52 a.m. with approximately 20-minute headways and on weekends from 7:00 a.m. to 12:49 a.m. with approximately 20-minute headways. The nearest bus stop is located near the intersection of Green Valley Road and Airport Boulevard, approximately 1 mile northwest of the project site.

Routes 72 and 72W provide service between the Watsonville Transit Center, the Watsonville Square Shopping Center, Amesti/Pinto Lake, and the Freedom Centre. Route 72 operates on weekdays only, from 6:30 a.m. to approximately 7:00 p.m. with approximately 60-minute headways. Route 72W operates on weekends only, from 10:00 a.m. to 6:30 p.m. with approximately 2-hour headways. The 72W weekend route also serves Corralitos. The nearest bus stop is located near the intersection of Green Valley Road and Minto Road, approximately 0.35 miles west of the project site.

Route 74S provides service between the Watsonville Transit Center, Pajaro Valley High School, the Watsonville Square Shopping Center, the Watsonville Hospital, and the Watsonville Municipal Airport. The route operates twice per weekday (one in the morning beginning at 7:30 a.m. and one in the evening beginning at 3:55 p.m.). There is no service during the weekends. The nearest bus stop is located near the intersection of Green Valley Road and Airport Boulevard, approximately 1 mile northwest of the project site.

Route 75 provides service between the Watsonville Transit Center, the Watsonville Square Shopping Center, the Freedom Centre, and Wheelock. The route operates on weekdays from 5:00 a.m. to approximately 7:00 p.m. with approximately 60-minute headways and on weekends from 6:00 a.m. to approximately 7:00 p.m. with 60-minute headways. The nearest bus stop is located near the intersection of Green Valley Road and Minto Road, approximately 0.35 miles west of the project site.

Route 78 provides service between the Watsonville Transit Center, Ohlone, the Watsonville Hospital, and the Freedom Centre. The route operates on weekdays from 5:50 a.m. to approximately 6:40 p.m. with approximately 60-minute headways and on weekends from 6:50 a.m. to approximately 6:30 p.m. with 60-minute headways. The nearest bus stop is located near the intersection of Green Valley Road and Airport Boulevard, approximately 1 mile northwest of the project site.

3.12.1.4 Air Traffic

The Watsonville Municipal Airport is located approximately 1.5 miles southwest of the project site and is the only airport in the County. The Watsonville Municipal Airport is a Regional General Aviation airport owned by the City of Watsonville and serves the business aviation requirements and recreational facilities of Watsonville, Santa Cruz County, and the Monterey Bay Area. The airport is home to 285 aircraft and is used extensively by various businesses and specifically the agri-business community. The two runways accommodate over 60,000 operations per year including an estimated 5,000 instrument approaches (City of Watsonville 2025).

3.12.1.5 Truck Routes–Weight and Load Limitations

The California Department of Transportation (Caltrans) maintains a map of truck networks on California state highways. District 5 includes the County, where the project is located. Trucks would use SR-1 and SR-152 to reach the project. County guidelines also allow for trucks to use Green Valley Road to reach the project. There are no weight limitations on Green Valley Road.

3.12.1.6 Rail

There are no rail facilities in the vicinity of the project site.

3.12.1.7 Vehicle Miles Traveled

On September 27, 2013, Senate Bill (SB) 743 was signed into law, which created a process to change the way that transportation impacts are analyzed under the California Environmental Quality Act (CEQA). SB 743 required the Governor's Office of Planning and Research (OPR)[1] to amend the CEQA Guidelines to provide an alternative to level of service (LOS) for evaluating transportation impacts. Under the new transportation guidelines, LOS, or vehicle delay, is no longer considered an environmental impact under CEQA. OPR recommended vehicle miles traveled (VMT) as the most appropriate measure of project transportation impacts for land use projects and land use plans. VMT is a metric measuring the total distance covered by all vehicles in a specific area over a set period, often 1 year. The OPR has clarified in its Technical Advisory that heavy-duty truck VMT is not required to be included in the estimation of a project's VMT; the advisory defines VMT as "the amount and distance of automobile travel attributable to a project" (OPR 2018). "Automobile" refers to on-road passenger vehicles, specifically cars and light trucks.

For land use projects, the VMT efficiency metrics (i.e., workers or residents) and appropriate method of estimation are used based on the predominant use. The County uses the County of Santa Cruz Travel Demand Model to estimate the average baseline VMT for the County. The baseline VMT per employee for the County is 9.9 daily VMT per employee (County of Santa Cruz 2025a).

3.12.2 Impact Analysis

The following sections discuss the potential direct and indirect impacts related to traffic and transportation from construction and operation of the project. The analysis was prepared based on a review of the SB 743 Implementation Guidelines for the County of Santa Cruz (County of Santa Cruz 2025a) and the County's Access and Mobility Element (County of Santa Cruz 2024a), which contains local LOS and other transportation-related policies and plans.

3.12.2.1 Methodology

Vehicle Miles Traveled Screening, Analysis, and Impact Criteria

In accordance with SB 743 and the updated CEQA Guidelines, the County has adopted guidelines, screening criteria, and thresholds to address potential impacts to VMT. Per the SB 743 Implementation Guidelines for the County of Santa Cruz (County of Santa Cruz 2025a) and the OPR Technical Advisory, certain types of projects are presumed to have a less-than-significant impact and a numerical VMT analysis is not required (OPR 2018). If the project does not meet the applicable screening criteria, then further analysis is required to evaluate potential transportation impacts, as further described below.

Most land use and transportation projects have two phases: construction and operation. There is no significance threshold for construction. The guidance from the OPR and the County does not require a VMT analysis for construction projects or the construction phases of projects because the VMT generated by construction would be

[1] Effective July 1, 2024, the Governor's Office of Planning and Research was renamed the Governor's Office of Land Use and Climate Innovation.

short term and temporary. As previously noted, per OPR's 2018 Technical Advisory Guidance a quantitative VMT analysis for truck traffic (i.e., heavy-duty trucks) is not required per SB 743.

The County's screening criteria for land use projects or non-retail projects were used to determine whether long-term operation of the project can be screened out of conducting a detailed VMT analysis (County of Santa Cruz 2025a). The following VMT screening criteria are used by the County for non-retail projects (which includes residential, office, manufacturing, or industrial land uses):

- Projects that generate 110 or fewer daily trips[2]
- Projects that are located within 0.5 miles of either an existing major transit stop[3] or a stop along an existing high-quality transit corridor[4]

If a project meets either of the above-mentioned criteria, it can be screened out of VMT analysis and presumed to result in less than significant impacts. The County's guidelines provide four impact criteria that may be selected as thresholds for determining significance (County of Santa Cruz 2025a). The impact criteria are as follows:

- **Residential Projects:** The project's residential VMT per capita would not be 16.8% below the existing residential VMT per capita for the Baseline Area.
- **Office Projects:** The project's employment VMT per employee would not be 16.8% below the existing employment VMT per employee for the Baseline Area.
- **Regional Serving Retail Projects**: The project would result in a net increase in existing total VMT.
- **Land Use Plans:** The plan total VMT per service population (residents and employees) would not be 16.8% below the existing VMT per service population for the Baseline Area.

Because there are no thresholds for the construction (and decommissioning) phase of any project, a detailed, quantitative VMT analysis per SB 743 is generally not required for the construction (and decommissioning) phase of a project. Therefore, CEQA Guidelines Section 15064.3(b)(3), Qualitative Analysis, has been used for the construction phase of the project. Additionally, the project's air quality analysis provides a detailed construction phase analysis of the project's trips and VMT. See Section 3.1, Air Quality and Greenhouse Gases, for more information. The VMT generated by the operation of the proposed project would be fewer than 110 average daily trips, and hence the project would be screened out using the County's Guidelines.

2 Technical Advisory, p. 12 (OPR 2018): "CEQA provides a categorical exemption for existing facilities, including additions to existing structures of up to 10,000 square feet, so long as the project is in an area where public infrastructure is available to allow for maximum planned development and the project is not in an environmentally sensitive area. (CEQA Guidelines, Section 15301, subd. (e)(2).) Typical project types for which trip generation increases relatively linearly with building footprint (i.e., general office building, single tenant office building, office park, and business park) generate or attract an additional 110-124 trips per 10,000 square feet. Therefore, absent substantial evidence otherwise, it is reasonable to conclude that the addition of 110 or fewer trips could be considered not to lead to a significant impact."

3 California Public Resources Code, Section 21064.3: "'Major transit stop' means a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods."

4 California Public Resources Code, Section 21155: "For purposes of this section, a high-quality transit corridor means a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours." (This interval for headways for major transit stops was recently amended from 15 to 20 minutes per Assembly Bill 2553.)

Traffic Operations/Site Access Assessment

To comply with the County's General Plan Access and Mobility Element LOS policies, an intersection and roadway segment LOS analysis was conducted for the peak period of construction activities. The study locations, analysis scenarios, traffic volumes, and LOS methodology and impact criteria are presented in the following section.

Study Intersections and Roadway Segments

Based on the assumed project trip distribution, the following intersections were selected for analysis:

1. Green Valley Road/Minto Road
2. Green Valley Road/Holohan Road

In addition, the following road segments were selected for analysis:

1. Green Valley Road, between Holohan Road and Minto Road
2. Minto Road, between Green Valley Road and the project site

Traffic Volumes

Daily and AM and PM peak hour turning movement counts were collected at the study intersections and roadway segments in October 2025. The raw traffic data are provided in Appendix 3.12A. Traffic counts were adjusted to passenger car equivalents (PCEs) to reflect truck traffic according to the following industry standards:

- Light-duty trucks (2-axle): 1.5 PCE
- Medium-duty trucks (3-axle): 2.0 PCE
- Heavy-duty trucks (4+-axle): 3.0 PCE

Analysis Methodology

LOS is commonly used as a qualitative description of intersection operations and roadway segments and is based on the design capacity of the intersection configuration and roadway facility, compared to the volume of traffic using the facility. The County's intersection evaluation methodology for assessing transportation impacts and traffic operating conditions for intersections is based on the latest version of the Highway Capacity Manual (HCM) methodology (National Academies of Sciences, Engineering, and Medicine 2022).

The HCM analysis methodology describes the operation of an intersection using a range of LOS from LOS A (free-flow conditions) to LOS F (severely congested conditions), based on the corresponding control delay experienced per vehicle based on the worst turning movement for unsignalized intersections.

Synchro version 12 software was used to determine intersection LOS (for all scenarios), consistent with HCM 7 methodologies. Detailed LOS calculation worksheets (for all scenarios) are included in Appendix 3.12A. Table 3.12-1 shows the LOS values by delay ranges for unsignalized intersections under the HCM methodology.

Table 3.12-1. Levels of Service for Intersections using HCM Methodology

Level of Service	Unsignalized Intersections Control Delay (in seconds per vehicle)	Signalized Intersections Control Delay (in seconds per vehicle)
A	< 10.0	< 10.0
B	> 10.0 to < 15.0	> 10.0 to < 20.0
C	> 15.0 to < 25.0	> 20.0 to < 35.0
D	> 25.0 to < 35.0	> 35.0 to < 55.0
E	> 35.0 to < 50.0	> 55.0 to < 80.0
F	> 50.0	> 80.0

Source: HCM 7 (Transportation Research Board 2022).

County of Santa Cruz Criteria

The County focuses on a quantitative evaluation of the project's expected access and circulation operations. Project access is considered constrained if the project's traffic would contribute to unacceptable queuing at nearby signalized intersections. Unacceptable or extended queuing may be defined as follows:

- Spill over from turn pockets into through lanes
- Spill over into intersections

Santa Cruz County General Plan, Section AM-6.2 denotes LOS standards within the County. The standards are noted below (County of Santa Cruz 2024a):

> Objective AM-6.2 Level of Service. To design new development to minimize congestion, thereby increasing the efficiency of the transportation system.
>
> Policy AM-6.2.1 Level of Service Criteria. Require development projects to provide multimodal roadway improvements necessary to achieve a minimum level of service (LOS) of "D," except for those where a lesser LOS has been accepted by the County pursuant to the criteria specifically identified in Table 3-2. When development is proposed on roads where a LOS E or F standard has been accepted, require feasible mitigation in the form of road improvements, a fair share contribution to a road improvement program, or other in-lieu mitigation for the transportation system.

Additionally, activities associated with project construction and major in-street construction may need to evaluate the following (County of Santa Cruz 2024a):

- For projects that require construction activities to take place within the right-of-way of a highway, would it be necessary to close any temporary lanes, alleys, or streets for more than 1 day (including day and evening hours, and overnight closures if on a residential street)?
- For projects that require construction activities to take place within the right-of-way of a local street, would it be necessary to temporarily close any lanes, alleys, or streets for more than seven days (including day and evening hours, and including overnight closures if on a residential street)?
- Would in-street construction activities result in the loss of any vehicle, bicycle, or pedestrian access, including loss of existing bicycle parking to an existing land use for more than 1 day, including day and evening hours and overnight closures if access is lost to residential units?

- Would in-street construction activities result in the loss of any ADA access to an existing transit station, stop, or facility (e.g., layover zone)?
- Would in-street construction activities restrict access to any bus stops for more than 1 day, or necessitate any rerouting of a bus route?
- Would construction of a project interfere with pedestrian, bicycle, transit, or vehicle circulation and accessibility to adjoining areas?

3.12.2.2 Impact Evaluation Criteria

The potential for impacts to traffic and transportation was evaluated using the criteria described in the CEQA Environmental Checklist (Appendix G of the CEQA Guidelines). Specific to traffic and transportation, the CEQA Checklist asks, in part, whether the project would:

- Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities.
- Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b).
- Substantially increase hazards due to geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).
- Result in inadequate emergency access.

In addition, Appendix B of the California Energy Commission's Siting Regulations (20 CCR Division 2, Chapter 5) require evaluation of the following:

- Potential impacts to an airport if the proposed project including any linear facility is to be located within four miles of an airport, a planned or proposed airport runway, or an airport runway under construction.
- Current and projected roadway and intersection level of service before project development, during construction, and during project operation.
- Project-related hazardous materials to be transported to or from the project site during construction and operation.

Although CEQA no longer requires an analysis of vehicular delay, an LOS analysis is included under Section 3.12.3 to comply with the California Energy Commission requirements for opt-in applications (20 CCR 1704, Appendix B).

Project Trip Generation

A project's potential traffic and transportation related impacts are based on the project's trip generation. Therefore, a detailed discussion of the project's construction and operational phase trip generation is provided in this section. Construction-related trip generation for the proposed project is primarily based on the number of construction employees or workers, as well as the estimated quantity of material and equipment to be delivered by truck provided by the applicant and used in the proposed project's air quality analysis (see Section 3.1). Operational trip generation is based on the number of permanent employees and frequency of maintenance activities.

Construction Trip Generation

Trip generation estimates for construction projects are based on average or peak number of workers and trucks that would be required for the proposed construction activities. Construction traffic includes the number of workers

and the amount of truck traffic that would be generated to and from the site daily and during the AM and PM peak commuting hours. The maximum number of construction-related trips is expected to occur over a series of construction phases that would overlap or occur concurrently. Therefore, the overall peak construction period was used to calculate the estimated trip generation for the project.

Construction of the project is anticipated to begin in June 2027 and last approximately 12–18 months, concluding in November 2028. The commercial operation date is expected shortly following the completion of testing and commissioning in June 2029. There are 10 construction phases and 1 decommissioning phase that each have representative start and end dates, with some overlapping days of construction. Construction activities, schedule, and an estimate of related worker and truck trips for the construction and decommissioning phases of the proposed project are shown in Table 3.12-2.

Decommissioning

Per current industry standards, the project has an operational life of 30–35 years. Transportation impacts of decommissioning at the end of the project's operational life are expected to be similar to impacts from construction outlined above. However, traffic volumes within the project vicinity cannot be projected that far in the future, and as such, a specific analysis and outcome of impacts attributed to decommissioning activities cannot be determined at this time. A decommissioning plan would be required to be prepared for the project, which would be updated immediately prior to decommissioning. The decommissioning plan would include measures specific to transportation impacts of decommissioning, if necessary. See Section 2.6, Decommissioning, for a discussion of decommissioning. The project's Decommissioning Plan can be found in Appendix 2G.

Table 3.12-2. Phasing and Schedule – Construction and Decommissioning

No.	Phase	Start	End	Average Daily Trips			Total Trips	Total Trips (PCE)
				Workers	Vendor Trucks	Haul Trucks		
Construction								
1	Site Preparation	6/1/2027	7/1/2027	40	4	0	44	48
2	Substation Site Preparation	7/2/2027	7/16/2027	40	4	0	44	48
3	Civil Work and Grading	7/2/2027	7/30/2027	40	4	0	44	48
4	Substation Civil Work and Grading	7/31/2027	8/14/2027	40	4	0	44	48
5	Battery Enclosure/Power Conversion System Installation	7/31/2027	11/30/2028	40	20	2	62	86
6	Substation Installation	8/15/2027	4/15/2028	40	20	0	60	80
7	Gen-Tie Foundations and Tower Erection*	4/16/2028	6/16/2028	10	4	0	14	18
8	Gen-Tie Stringing and Pulling*	6/16/2028	7/17/2028	8	4	0	12	16
9	Testing and Commissioning	12/1/2028	6/1/2029	160	0	0	160	160
10	Decommissioning	5/31/2064	12/31/2064	40	4	2	46	54

Notes: PCE = Passenger car equivalent.
* PG&E interconnection facility upgrades would occur as part of these phases.

Construction of the project would occur over an approximately 12–18-month period anticipated to start in 2027. This overall peak construction period was used to calculate the estimated trip generation for the project. Trip generation estimates for the peak construction period include the number of workers and the amount of truck traffic that would be generated to and from the site daily and during the AM and PM peak commuting hours.

Generally, construction work schedules are expected to be up to 10 hours per day Monday through Friday, excluding weekends and federal holidays. Typically, the workday would consist of one shift beginning as early as 7:00 a.m. and ending as late as 6:00 p.m. To provide a conservative analysis, all construction workers were assumed to arrive at the site during the AM peak period (7:00 a.m. to 9:00 a.m.) and all workers were assumed to depart the site during the PM peak period (4:00 p.m. to 6:00 p.m.). Truck deliveries are typically sporadic throughout the workday; therefore, truck arrivals and departures were assumed to be distributed evenly over the course of a 10-hour workday.

The trip generation estimates during the peak construction period for the project are summarized in Table 3.12-3. To account for the impact that construction-related trucks may have compared to construction worker passenger vehicles, PCE factors were applied to the trip generation estimates. PCEs are used to convert mixed traffic streams (containing of various vehicle types, like trucks and buses alongside passenger cars) into an equivalent stream of passenger cars for capacity analysis and traffic modeling.

Table 3.12-3. Peak Construction Trip Generation Estimates

Vehicle Type	Daily Quantity		Daily	AM Peak Hour			PM Peak Hour		
				In	Out	Total	In	Out	Total
Non-PCE Adjusted Trip Generation									
Construction Workers	40	workers	80	40	0	40	0	40	40
Vendor Trucks	20	trucks	40	3	3	6	3	3	6
Haul Trucks	1	trucks	2	1	0	1	1	0	1
Total Trip Generation (Non-PCE)			**122**	**44**	**3**	**47**	**4**	**43**	**47**
PCE Adjusted Trip Generation									
Construction Workers	40	workers	80	40	0	40	0	40	40
Vendor Trucks	20	trucks	80	6	6	12	6	6	12
Haul Trucks	1	trucks	6	3	0	3	3	0	3
Total Trip Generation (PCE)			**166**	**49**	**6**	**55**	**9**	**46**	**55**

Notes: PCE = Passenger car equivalent.
Conservatively assumes all construction workers arrive in the AM peak hour and depart the site in the PM peak hour.
Vendor and haul trucks are assumed to arrive and depart the site evenly throughout the workday.

A 2.0 PCE factor was applied to vendor trucks and a 3.0 PCE factor was applied to haul trucks.

As shown in Table 3.12-3, the peak period of construction would generate approximately 122 daily trips, 47 AM peak hour trips, and 47 PM peak hour trips. With the PCE factors applied, the peak period of construction for the project would generate approximately 166 daily PCE trips, 55 AM peak hour PCE trips and 55 PM peak hour PCE trips.

For all other phases of construction, the amount of vehicular traffic is estimated to be less than the peak period. All construction-related traffic would be temporary and short term and would end upon completion of the project.

Operation Trip Generation

Once constructed, the facility would be remotely monitored and operated but would require up to eight O&M workers to visit the facility on an approximately weekly basis during operation. It is assumed there would be an average of two trips per employee occurring once per week (16 trips per week). Because the operational trips would be less than 110 daily trips, the operation of the project would not warrant a detailed transportation analysis per the County's Guidelines.

Project Trip Distribution

Project-related construction traffic was distributed on the local and regional roadway network based on logical travel paths to and from the project site. It is estimated that the majority of construction workers would come from the City of Santa Cruz to the west or from the Cities of Hollister, Salinas, or Gilroy to the east. Truck trips would come from the City of Salinas. All the project's trips would traverse Green Valley Road northbound from SR-1 or SR-152 to reach the project site. Project trip distribution percentages are shown in Figures 3.12-5 and 3.12-6 for passenger vehicle and truck trips, respectively.

Project trips were assigned to the intersections in the project vicinity by applying the above-referenced project trip generation estimates to the trip distribution percentages at each study intersection. The project trip assignments are shown in Figures 3.12-7, 3.12-8, and 3.12-9 for passenger vehicle, truck, and total trip assignments, respectively.

3.12.2.3 California Environmental Quality Act Appendix G/California Energy Commission Appendix B Assessment Criteria

The following sections present the potential effects from the construction and operation of the proposed project on transportation resources utilizing the criteria described in Appendix G of the CEQA Guidelines and addressing the informational requirements of Appendix B of the California Energy Commission's Siting Regulations.

Criterion 3.12-1 Would the project conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

Less than Significant. A detailed discussion of applicable plans and policies is provided under Section 3.12.5, Laws, Ordinances, Regulations, and Standards. The project would not impede the implementation of any plans or policies regarding proposed transit, roadway, bicycle, or pedestrian facilities.

Construction of the project would generate temporary trips for a period of 12–18 months in the project vicinity. The effect of construction traffic has been evaluated at the traffic intersections and roadway segments in the project vicinity, and results are provided under Criterion 3.12-6. Construction of the proposed project would not result in a permanent change to the existing or planned circulation system near the project site. The majority of the construction activities would occur on site and would not affect the public right-of-way. The proposed project would implement **Mitigation Measure (MM) TRAF-1, Construction Traffic Management Plan,** to minimize impacts, which includes measures such as staggering work shifts to reduce peak periods of congestion, scheduling truck deliveries outside of peak hours, using flaggers in the event of a partial lane closure along Minto Road, and ensuring adequate parking is provided on site, among other measures.

The permanent operations and management of the project would be monitored remotely via a Supervisory Control and Data Acquisition system and would require up to eight O&M workers to visit the facility on an approximately weekly basis. The trips associated with the permanent employees commuting to the site, visitors, and/or light deliveries would be nominal (up to 16 trips occurring per week) and thus would not pose an impact to the circulation system.

As such, the project would not conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities, and impacts would be less than significant.

Criterion 3.12-2 Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

Construction VMT

Less than Significant. For the purposes of this application, a qualitative analysis of construction VMT has been prepared. Vehicle-trip generation (for workers and trucks) as a result of project construction has been summarized in Tables 3.12-2 and 3.12-3. Based on the peak construction trip generation estimates, construction of the project would generate approximately 80 non-PCE daily vehicle trips, which is fewer than the significance standard of 110 daily trips as outlined in both the OPR guidelines and the County Guidelines. Therefore, construction of the proposed project would not conflict or be inconsistent with CEQA Guidelines Sections 15064.3(b)(1) and 15064.3(b)(3), and impacts would be less than significant.

Operations and Maintenance Vehicle Miles Traveled

Less than Significant. As shown in the screening analysis below, the long-term operation of the project would be screened out using the criteria noted below and therefore would not require further VMT analysis under the County's TIA Guidelines. The County's TIA Guidelines suggest that nonretail projects may screen out of VMT impacts using a variety of factors such as low weekday daily trip generation, proximity to an existing major transit stop or a stop along an existing high quality transit corridor, map base screening, or 100% affordable housing. The following criterion has been used in screening the project's VMT, consistent with the County's TIA Guidelines for SB 743 compliance (Santa Cruz County 2025a):

Non-Retail Project Trip Generation Screening: If a development project generates a net increase of 110 or more daily vehicle trips, then further VMT analysis is required. Therefore, a project with less than 110 daily net trip generation would screen out of conducted further VMT analysis and a less than significant determination can be made.

During the O&M phase, approximately 8 workers or employees would be required to visit the facility on an approximately weekly basis. It is assumed there would be an average of two trips per employee occurring once per week (16 trips per week). Since the project would generate fewer than 110 daily trips, the project impacts due to operations would be less than significant. Therefore, a detailed VMT analysis is not required, and the operation of the proposed project would not conflict or be inconsistent with CEQA Guidelines Sections 15064.3(b). Impacts would be less than significant.

Criterion 3.12-3 Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Less than Significant**.** The project would not include any new roadway design features, nor would it alter any existing geometric design features along any County streets. There would be no changes to the existing access or off-site circulation on County roads. As such, vehicles entering and exiting the project site would be able to do so safely at the project driveway, from Minto Road, during construction and demolition of the project. Therefore, no sharp curves, dangerous intersections, or incompatible uses would be introduced by the project during construction and demolition activities. There would be no impacts associated with hazardous design features or incompatible land uses.

Once constructed, the proposed project would be designed to meet the current County roadway design standards.

Therefore, the project would not substantially increase hazards due to a geometric design feature or incompatible uses and impacts would be less than significant.

Criterion 3.12-4 Would the project result in inadequate emergency access?

Less than Significant. Emergency services within the County are provided by the Santa Cruz County Fire Department and Sheriff's Department, in cooperation with local agencies. Emergency access to the project would be through the project's primary access driveway on Minto Road. Proposed secondary access roads include three options that extend the on-site access to the south, along the project's south/southeastern boundaries. Options 1 and 2 would go through a County-owned property (Assessor's Parcel No. 051-101-59) to the south, currently operated by Parajo Valley Unified School District, along two different alignments to connect to Grimmer Road. Option 1 would extend through undeveloped land and a parking area to connect to the section of Grimmer Road that serves the County's parcel. Option 2 would extend from the project property through an existing parking area on the County's parcel to extend to Grimmer Road. Option 3 would extend southwest within Assessor's Parcel No. 051-101-78, cross into the southern adjoining parcel (Assessor's Parcel No. 051-101-53), continue southeast before turning west, then continue southeast and terminate where the Grimmer Road public right-of-way starts. The secondary access road would provide additional emergency access to the site and would only be used as-needed. Construction and operation of the project is not anticipated to require long-term road closures and would have no effect on the operations of emergency vehicles. During construction, through traffic and emergency access would be maintained at all times due to most of the construction occurring on the project site itself. Construction and operation of the proposed project would not result in inadequate emergency access and impacts would be less than significant.

Criterion 3.12-5 Would the project result in potential impacts to an airport if the proposed project including any linear facility is to be located within four miles of an airport, a planned or proposed airport runway, or an airport runway under construction.

No Impact. The project site, including the gen-tie line, is approximately 1.5 miles from the Watsonville Airport. The project is not expected to have any effect on the operations of any air facility nearby**.** The project site is within the Watsonville Airport Influence Area (AIA). However, the project site is outside of the mapped Noise Contours area and outside of the mapped Safety Compatibility Zones (County of Santa Cruz 2024b) and would not result in potential impacts to the airport. Maps of the existing AIA and safety zones are provided as Figures 3.12-10a and 3.12-10b, respectively. Further, a pre-screen of the project's tallest

potential component (up to 90-foot-tall gen-tie pole) as a worst-case scenario was performed using the Federal Aviation Administration's Obstruction Evaluation/Airport Airspace Analysis tool. Based on the pre-screening results, the project is not required to file notice with the Federal Aviation Administration (see Appendix 3.12B). No impact would occur.

Criterion 3.12-6 Would the project exceed current and projected roadway and intersection level of service before project development, during construction, and during project operation.

The study area for traffic analysis of the project was determined based on the location of the site along Green Valley Road and the route of construction traffic, as described in Section 3.12.2.1, Methodology. An analysis of the existing intersection and roadway operations, with and without the project traffic, is provided below.

Intersection LOS with Construction Traffic

Less than Significant. Existing intersection geometrics for intersections in the project vicinity are shown on Figure 3.12-11, and the weekday AM and PM peak hour volumes are shown on Figure 3.12-12. The existing plus project traffic volumes are shown on Figure 3.12-13.

Table 3.12-4 shows the results of the LOS analysis for intersections. All the study intersections are currently operating at satisfactory LOS (LOS D or better) under existing conditions and would continue to operate at satisfactory LOS during the peak period of construction traffic.

Table 3.12-4. Existing plus Project Weekday Peak Hour Intersection Level of Service Analysis

No.	Intersection	Traffic Control	Existing				Existing plus Project			
			AM Peak		PM Peak		AM Peak		PM Peak	
			Delay[1]	LOS	Delay[1]	LOS	Delay[1]	LOS	Delay[1]	LOS
1.	Green Valley Road/ Minto Road	Signal	16.9	B	20.8	C	17.1	B	21.6	C
2.	Green Valley Road/ Holohan Road	Signal	17.9	B	20.8	C	18.3	B	20.8	C

Notes: LOS = level of service.
[1] Delay in seconds per vehicle

Roadway LOS with Construction Traffic

Less than Significant. Table 3.12-5 shows the results of the roadway segment LOS analysis. As shown below, the roadway segments in the project vicinity are operating at an acceptable LOS under existing conditions and would continue to operate at satisfactory LOS during the peak period of construction traffic.

Table 3.12-5. Existing plus Project Roadway Segment Level of Service Analysis

No.	Segment	Lanes	Design Capacity	Existing			Existing plus Project		
				Volume	V/C	LOS	Volume	V/C	LOS
1	Green Valley Road between Holohan Road and Minto Road	2L Arterial	27,100	16,882	0.62	B	16,992	0.63	B
2	Minto Road between Green Valley Road and Project Site	1L Connector	16,100	2,059	0.13	A	2,169	0.13	A

Notes: V/C = volume to capacity ratio; LOS = level of service.
Roadway segment v/c ratios determined using Highway Capacity Manual, 7th Edition, generalized Daily Service Volumes (Transportation Research Board 2022).

In addition, Table 3.12-6 presents the existing and project-added average daily trips on the roadways near the site, including the percentage of truck trips. The project would result in a 0.65% increase in total daily traffic on Green Valley Road and a 5.07% increase in total daily traffic on Minto Road.

Table 3.12-6. Estimated Existing Project Construction Trips on Regional Roadways

Roadway	Existing AADT[1]	Total Project AADT/ Percentage Change	Existing Truck AADT[1]	Project Truck AADT/ Percentage Change
Green Valley Rd., between Holohan Rd. and Minto Rd.	16,882	110/0.65%	216	86/39.8%
Minto Rd., between Green Valley Rd. and the project site	2,059	110/5.07%	22	86/390.9%

Notes: AADT = annual average daily traffic.
[1] Volume provided from average daily traffic counts conducted in October 2025. Existing truck volumes estimated based on percentage of existing peak hour truck trips.

Construction traffic could cause a substantial increase in truck traffic on both Green Valley Road and Minto Road, compared to the existing daily truck traffic on these roads. There would be a 39.8% increase in truck traffic on Green Valley Road and 390.9% increase on Minto Road. However, this increase represents approximately six vendor trucks (12 PCE trips) during each hour and one haul truck (three PCE trips) during each hour, over the course of a 10-hour workday.

While the increase in truck traffic, particularly on Minto Road, could potentially cause degradation of traffic operation on this local road segment, construction activities would be temporary and would be managed through implementation of **MM-TRAF-1**, as further described in Section 3.12.4, Mitigation Measures. A traffic management plan would include measures such as timing worker arrivals and departures and material deliveries to avoid peak hours and using carpools to minimize the amount of construction-generated traffic. Implementation of **MM-TRAF-1** would reduce the impact of increased traffic on both roadways.

Operation

Less than Significant. The permanent O&M of the project would be monitored remotely via a Supervisory Control and Data Acquisition system and would require up to eight O&M workers to visit the facility on an approximately weekly basis. The trips associated with the permanent employees commuting to the site,

visitors, and/or light deliveries would be negligible compared to the existing daily traffic on the surrounding roads and intersections. Impacts would be less than significant.

Criterion 3.12-7 Would the project result in significantly increased hazards associated with Project related hazardous materials to be transported to or from the Project site?

Less than Significant. As noted in Section 3.5, Hazardous Material Handling, transportation of hazardous materials would be required once the project is operating. All transportation of hazardous materials would comply with the following agencies:

- U.S. Environmental Protection Agency
- Caltrans
- California Department of Toxic Substance Control
- California Highway Patrol (CHP)
- California State Fire Marshal

To manage and prevent potential impacts caused by transporting hazardous materials, contractors would adhere to these agencies' regulations. Materials would only be mobilized along approved transportation routes, thereby avoiding sensitive receptors to the extent practicable.

Division 13, Section 31303, of the California Vehicle Code (CVC) stipulates that the transportation of regulated substances and hazardous materials is required to be carried out via the most direct route, using state or interstate highways whenever possible. In accordance with this policy, subject to Caltrans approval, the recommended routes for delivery of regulated or hazardous materials would be via US 101, Interstate 5, SR-41, SR-152, and SR-1.

Table 3.12-7 provides a detailed summary of project-related hazardous materials to be transported to or from the project during construction and operation, including the types, estimated quantities, estimated total number of trips, anticipated routes, means of transportation, and any transportation hazards associated with such transport.

The project would also follow the transportation safety guidance provided by the manufacturer. The following safety measures are expected to be employed before and during transportation:

- Before transport, inspect the transport route in advance, particularly for obstructions, to ensure the vehicle can travel safely and smoothly along the route. Pre-transport route inspection should cover the following items: road conditions, height limits, actual heights, width limits, actual widths, weight limits, traffic restrictions, potential obstructions, and particularly vehicle weight limits on bridges. Do not transport the battery container when the temperature is below −30°C.
- The following conditions should be met for the transportation of battery container:
  - All cabinet doors are locked.
  - Select appropriate crane or lifting tool according to the site conditions. The lifting tool used shall have sufficient load bearing capacity, boom length and radius of rotation.
  - Additional traction may be required if battery containers need to be transported on slopes.
  - Remove all obstacles that exist or may exist on the way, such as tree branches, cables, etc.

- The battery container should be transported and moved under good weather conditions.
- Be sure to set up warning signs or warning areas to prevent non-staff from entering the lifting area to avoid accidents.
- The battery container must stand upright during transport.
- Lay the battery container down horizontally during transport. Ensure the tilt is ⩽15° during the whole transport process.
- Transport battery units at < 30% state of charge (SOC)
- If PACKs are transported separately, do not stack them in more than 4 layers.
- Avoid collision or strong shock during transport.
- For land transportation, it is recommended to give priority to the transportation vehicle equipped with "mushroom head" locking device; if the transportation vehicle does not have "mushroom head" locking device, the product needs to be fixed with ropes. Be sure to use ropes to secure the top and bottom of the product to the transportation vehicle so that the tilt angle is not too large during transportation, resulting in the product sliding and tipping.

With the implementation of the measures described above, the project would not result in significantly increased hazards associated with hazardous materials to be transported to or from the project site. Impacts would be less than significant.

Table 3.12-7. Transportation of Hazardous Materials

Hazardous Material	Typical Quantity	Estimated Total Number of Trips	Anticipated Route*	Means of Transportation	Transportation Hazards associated with Activity
Empty hazardous material containers	9 units	2 trips	From Watsonville via local roads to US 101, SR-41 to Kettleman Hills Facility	Truck	Risk of accident/spill during transport
Spent welding materials (welding rods, wire and grinding wheels, etc.)	More than 180 pounds	Construction equipment would remain on site and be refueled on site on a weekly basis during the construction period	From Watsonville via local roads to US 101, SR-41 to Kettleman Hills Facility	Truck	Risk of accident/ spill during transport
Waste oil (lubricating and insulating)	1,830 gallons	2 trips	From Watsonville via local roads to US 101, SR-41 to Kettleman Hills Facility	Truck	Risk of accident/ spill during transport
Waste oil filters	91 units	2 trips	From Watsonville via local roads to US 101, SR-41 to Kettleman Hills Facility	Truck	Risk of accident/ spill during transport
Oily rags, oil sorbent	183 units	2 trips	From Watsonville via local roads to US 101, SR-41 to Kettleman Hills Facility	Truck	Risk of accident/ spill during transport
Solvents, detergents, glycols, refrigerants, paint, and adhesives	9 gallons	2 trips	From Watsonville via local roads to US 101, SR-41 to Kettleman Hills Facility	Truck -	Risk of accident/ fire during transport
Spent lead–acid batteries and electrical fuses	<10 units	2 trips	From Watsonville via local roads to US 101, SR-41 to Kettleman Hills Facility	Truck	Risk of accident/ spill during transport

Notes: SR = State Route.

* Anticipated route. Except for the designated entry and on-site routing, the actual routing on public roads and state and federal highways would be determined by materials transporters, consistent with their licensing requirements and applicable laws, ordinances, regulations, and standards.

3.12.3 Cumulative Effects

The cumulative projects list included in the introduction to Chapter 3, Environmental Analysis, were reviewed to determine if any approved or pending projects in the vicinity would have the potential to add traffic to the intersection in the project vicinity (County of Santa Cruz 2025b). Based on a review of the projects and their respective proposed land uses, none of the projects were determined to add substantial traffic through the study intersections. Although the cumulative projects would not add substantial traffic to the study intersections, a growth rate of 0.6% per year has been applied to the existing traffic counts to account for background growth in the area through 2028. Therefore, this section presents the results of a cumulative condition analysis that was conducted for a short-term horizon year (2028) when the project is still under construction. The cumulative peak hour traffic volumes are shown in Figure 3.12-14 and the cumulative plus project traffic volumes are shown in Figure 3.12-15.

Cumulative Year (2028) Intersection Conditions

Less than Significant. Table 3.12-8 summarizes the results of the intersection analysis for the AM and PM peak hours for Cumulative Year (2028) conditions. All the study intersections are forecast to operate at satisfactory LOS (LOS D or better) under Cumulative Year conditions and would continue to operate at satisfactory LOS during the peak period of construction traffic.

Table 3.12-8. Cumulative (2028) plus Project Weekday Peak Hour Intersection Level of Service Analysis

No.	Intersection	Traffic Control	Cumulative (2028)				Cumulative (2028) plus Peak period Construction			
			AM Peak		PM Peak		AM Peak		PM Peak	
			Delay[1]	LOS	Delay[1]	LOS	Delay[1]	LOS	Delay[1]	LOS
1.	Green Valley Road/ Minto Road	Signal	17.0	B	21.9	C	17.1	B	22.9	C
2.	Green Valley Road/ Holohan Road	Signal	18.1	B	24.7	C	18.6	B	24.7	C

Notes: LOS = level of service.
[1] Delay in seconds per vehicle

Cumulative (Year 2028) Roadway Conditions

Less than Significant. Table 3.12-9 shows the results of the roadway segment LOS analysis under Cumulative Year conditions. As shown below, the roadway segments in the project vicinity are forecast to operate at an acceptable LOS under Cumulative Year conditions and would continue to operate at satisfactory LOS during the peak period of construction traffic.

Table 3.12-9. Cumulative plus Project Roadway Segment Level of Service Analysis

No.	Segment	Lanes	Design Capacity	Cumulative			Cumulative plus Project		
				Volume	V/C	LOS	Volume	V/C	LOS
1	Green Valley Road between Holohan Road and Minto Road	2L Arterial	27,100	17,186	0.62	B	17,296	0.64	B

Table 3.12-9. Cumulative plus Project Roadway Segment Level of Service Analysis

No.	Segment	Lanes	Design Capacity	Cumulative			Cumulative plus Project		
				Volume	V/C	LOS	Volume	V/C	LOS
2	Minto Road between Green Valley Road and Project Site	1L Connector	16,100	2,096	0.13	A	2,206	0.14	A

Notes: V/C = volume to capacity ratio; LOS = level of service.

In addition, Table 3.12-10 presents the cumulative and project-added average daily traffic on the roadways near the site, including the percentage of truck trips. The project would result in a 0.64% increase in total daily traffic on Green Valley Road and a 4.99% increase in total daily traffic on Minto Road.

Construction traffic could cause a substantial increase in truck traffic on both Green Valley Road and Minto Road, compared to the estimated cumulative daily truck traffic on these roads. There would be a 39.1% increase in truck traffic on Green Valley Road and 379.5% increase on Minto Road. However, this increase represents approximately six vendor trucks (12 PCE trips) during each hour and one haul truck (three PCE trips) during each hour, over the course of a 10-hour workday. While the increase in truck traffic, particularly on Minto Road, could potentially cause degradation of traffic operation on this local road segment, implementation of MM-TRA-1 would reduce the impact of increased traffic on both roadways.

Table 3.12-10. Estimated Cumulative Project Construction Trips on Regional Roadways

Roadway	Cumulative AADT[1]	Total Project AADT/ Percentage Change	Cumulative Truck AADT[1]	Project Truck AADT/ Percentage Change
Green Valley Rd., between Holohan Rd. and Minto Rd.	17,186	110/0.64%	220	86/39.1%
Minto Rd., between Green Valley Rd. and the project site	2,096	110/4.99%	23	86/379.5%

Notes: AADT = annual average daily traffic.

1 Volume estimated from average daily traffic counts conducted in October 2025. Cumulative truck volumes estimated based on percentage of existing peak hour truck trips.

Based on the above, the cumulative effect of the project would not be measurable and would be less than significant.

3.12.4 Mitigation Measures

All construction related trips would be temporary for the duration of project construction and background traffic volumes and travel patterns would return to pre-construction conditions upon the completion of construction. However, due to possible traffic delays due to slow-moving vehicles, as well as increased traffic on a residential street (Minto Road), **MM-TRA-1**, which would require a construction traffic management plan, is recommended in order to minimize temporary impacts during construction.

MM-TRAF-1

Prior to initiation of construction activities, a construction traffic management plan shall be prepared and filed with the County of Santa Cruz (County). The project applicant would also obtain all required transportation and haul permits from the California Department of Transportation and the County for construction truck traffic. Potential traffic management measures may include the following:

- Warning signage that meets County requirements for driver notification of construction activity in the vicinity of the project.
- Staggering work shifts to reduce peak periods of congestion.
- Scheduling truck deliveries outside of peak hours (7:00 a.m. to 9:00 a.m. and 4:00 p.m. to 6:00 p.m.).
- Use of flaggers in the event a partial lane closure is needed or access along Minto Road is hindered.
- Ensuring adequate parking is provided on site for construction personnel and trucks.
- Providing information packets for affected neighbors to bring awareness to the project activities and measures to minimize impacts.
- Informing emergency service providers of construction traffic schedule.
- Maintaining emergency vehicle access to the project site at all times.

3.12.5 Laws, Ordinances, Regulations, and Standards

Transportation for the project would be governed by federal, state, and local laws. Applicable laws and regulations address roadway circulation standards and hazardous material transportation requirements. Federal, state, and local LORS applicable to transportation are discussed below and summarized in Table 3.12-11.

Table 3.12-11. Laws, Ordinances, Regulations, and Standards Applicable to Transportation

Jurisdiction	Laws, Ordinances, Regulations, and Standards	Applicability	Project Conformity	Opt-In Application Reference
Federal	Code of Federal Regulations (CFR)	Provides standards for labels, placards, and markings on hazardous materials shipments by truck (Part 172), standards for packaging hazardous materials (Parts 173), and for transporting hazardous materials in tank cars (Part 179).	**Yes**. The project would be consistent with the CFR regulations by using applicable standards for labeling and packaging hazardous materials.	Section 3.12.5.1
State	California Environmental Quality Act (CEQA)	Requires state and local government agencies to inform decision makers and the public about the potential environmental impacts of proposed	**Yes**. The project's impact analysis provided, specifically, the VMT analysis has been prepared per CEQA requirements for	Section 3.12.2.3 Section 3.12.5.2

		projects and to reduce those environmental impacts to the extent feasible.	transportation impact analysis.	
State	California Vehicle Code (CVC)	A rulebook containing information about traffic laws in California	**Yes**. The project would comply with the applicable provision of the CVC and apply for required transportation and encroachment permits from the agencies.	Section 3.12.5.2 Section 3.12.6 Section 3.12.7
Local	Santa Cruz County Regional Transportation Commission Regional Transportation Plan (RTP)	The RTP outlines transportation challenges and establishes investment priorities for all of Santa Cruz County. The plan includes lists of transit, highway, local road, bike, and pedestrian needs in the region and estimates the amount of local, state and federal dollars that may be available for these projects over the next 20 to 25 years.	**Yes**. The project would not conflict or impede the implementation of any plans or policies regarding proposed transit, roadway, bicycle, or pedestrian facilities.	Section 3.12.2.3 Section 3.12.5.3
Local	Santa Cruz County General Plan Access and Mobility Element	The Access and Mobility Element is intended to be the key policy statement of the County regarding transportation facilities and programs serving the unincorporated areas.	**Yes**. The project would not conflict or impede the implementation of any plans or policies regarding proposed transit, roadway, bicycle, or pedestrian facilities including the Santa Cruz General Plan.	Section 3.12.2.3 Section 3.12.5.3
Local	Santa Cruz County General Plan, Appendix H: Airport Land Use Compatibility Requirements + County Strategy.	The County's Airport Land Use Compatibility Requirements + County Strategy provides context for the policies and implementation measures regarding the County's approach to meeting statutory requirements for an airport land use compatibility plan for	**Yes.** The project is located outside of the mapped Noise Contours area and outside of the mapped Safety Compatibility Zones (County of Santa Cruz 2024b) and would not result in potential impacts to the airport.	Criterion 3.12-5 Section 3.12.2.3

Table 3.12-11. Laws, Ordinances, Regulations, and Standards Applicable to Transportation

Jurisdiction	Laws, Ordinances, Regulations, and Standards	Applicability	Project Conformity	Opt-In Application Reference
		Watsonville Municipal Airport.		
Local	Santa Cruz County Active Transportación Plan	The Santa Cruz County Active Transportation Plan was completed in 2022 and consolidates all bicycle and pedestrian related County plans and projects that are currently identified in the County General Plan, the Santa Cruz County Regional Transportation Commission Regional Transportation Plan, and other local documents.	**Yes**. The project would not conflict or impede the implementation of any plans or policies regarding proposed transit, roadway, bicycle, or pedestrian facilities including the Santa Cruz County Active Transportation Plan (County of Santa Cruz 2022).	Criterion 3.12-3 Section 3.12.5.3
Local	Transportation Impact Analysis (TIA) Guidelines, Traffic Control Requirements	Includes guidance and requirements for VMT analysis of development and transportation projects, including project screening, analysis methodology, significance criteria, impact assessment, and mitigation strategies.	**Yes**. The project's impact analysis addresses the VMT and operational analysis and criteria detailed in the County's TIA Guidelines, as they apply to the proposed project.	Section 3.12.2.3 Section 3.12.5.3

3.12.5.1 Federal

Code of Federal Regulations

Title 49, Parts 172, 173, and 179

Code of Federal Regulations (CFR) Title 49, Part 172 primarily deals with the labeling, marking, and placarding of hazardous materials for transportation. It establishes standards for how hazardous materials must be labeled and marked on packages, containers, and vehicles to communicate their contents and associated risks effectively.

CFR Title 49, Part 173 focuses on the general requirements for the shipping of hazardous materials. It includes regulations for packaging, including specifications for various types of containers, as well as rules for classifying, describing, and documenting hazardous materials. Section 173 also covers the conditions and exceptions under which certain hazardous materials can be transported and provides guidelines for emergency response information and training.

CFR Title 49, Part 179 pertains to the transportation of hazardous materials in the United States. This section outlines design, construction, and testing standards for portable tanks, as well as operational and maintenance procedures to ensure the safe transport of hazardous materials.

The project would appropriately label, package, and transport hazardous materials in accordance with CFR Title 49, Parts 172, 173, and 179. Therefore, the project would comply with these requirements.

Title 49, Part 397.9 (Hazardous Materials Transportation Act of 1974)

The Hazardous Materials Transportation Act of 1974 regulates the transportation of hazardous materials in commerce. This act establishes a framework for safe and secure handling, labeling, packaging, and transportation of hazardous materials. It empowers the U.S. Department of Transportation to develop and enforce regulations to minimize the risks associated with transporting hazardous materials on highways, railways, waterways, and in the air. The act also sets penalties for violations and provides funding for research, training, and emergency response planning related to hazardous materials transportation.

The project would transport hazardous materials in accordance with all applicable federal, state, and local regulations, including the Hazardous Materials Transportation Act of 1974, and thus would comply with this requirement.

Title 49, Parts 350–399 (Federal Motor Carrier Safety Regulations)

The Federal Motor Carrier Safety Regulations oversee and regulate commercial motor carriers, drivers, and the safe operation of commercial motor vehicles. Parts 350–399 address various aspects of motor carrier safety, including driver qualifications, hours of service, vehicle inspections and maintenance, and commercial driver's license requirements. Additionally, these parts also regulate hazardous materials transportation, including the classification, packaging, and labeling of hazardous materials, as well as safety standards for transporting these materials.

The project would transport hazardous materials in accordance with all applicable federal, state, and local regulations, including the Federal Motor Carrier Safety Regulations, and thus would comply with this requirement.

Title 14, Part 77.9

CFR Title 14, Part 77.9 requires an applicant to notify the Federal Aviation Administration of the construction of structures exceeding 200 feet above ground level or exceeding defined imaginary surfaces within 20,000 feet of the nearest point of the nearest runway of an airport with at least one runway longer than 3,200 feet or within 10,000 feet of the nearest point of the nearest runway of an airport with the longest runway no more than 3,200 feet.

The project would not trigger this requirement and would thus conform with CFR Title 14, Part 77.9.

3.12.5.2 State

California Environmental Quality Act

CEQA requires state and local government agencies to inform decision makers and the public about the potential environmental impacts of the project and to reduce environmental impacts to the extent feasible. Appendix G of the CEQA Guidelines includes recommended criteria for evaluating potential impacts related to traffic and transportation.

The project's impact analysis provided in Section 3.12.2, specifically the VMT analysis, has been prepared per CEQA requirements for transportation impact analysis.

California Streets and Highways Code

The California Streets and Highways Code specifically pertains to the planning, construction, maintenance, and regulation of streets and highways within the State of California. Specifically, the California Streets and Highways Code includes regulations regarding highway designation, highway construction, highway maintenance, eminent domain, public transportation, bicycle and pedestrian infrastructure, emergency services, and traffic control.

Project vehicular transportation would comply with all applicable federal, state, and local regulations, including the California Streets and Highways Code, and thus would conform with this requirement.

California Senate Bill 743

On September 27, 2013, SB 743 was signed into law, which created a process to change the way transportation impacts are analyzed under CEQA. SB 743 required the OPR to amend the CEQA Guidelines to provide an alternative to LOS as the metric for evaluating transportation/traffic impacts. Under the new transportation guidelines, LOS or vehicle delay, is no longer considered an environmental impact under CEQA. Amendments to the CEQA Guidelines required under SB 743 were approved on December 28, 2018, and the new Section 15064.3 identifies VMT as the most appropriate measure of transportation impacts under CEQA effective July 1, 2020. Related legislation, SB 32 (2016), requires California to reduce greenhouse gas emissions 40% below 1990 levels by 2030. The California Air Resources Board has determined that it is not possible to achieve this goal without reducing VMT growth, and specifically, California needs to reduce per capita VMT across all economic sectors. SB 743 is primarily focused on passenger-cars and the reduction in per capita VMT as it relates to individual trips.

The OPR Technical Advisory (OPR 2018) provides guidance and tools to properly carry out the principles within SB 743 and evaluate transportation impacts under CEQA. The County of Santa Cruz CEQA Transportation Analysis Guidelines and OPR's Technical Advisory have been used to evaluate the proposed project.

California Department of Transportation

As the owner and operator of the state highway system, Caltrans implements established state planning priorities in all functional plans, programs, and activities. Caltrans has the responsibility to coordinate and consult with local jurisdictions when proposed local land use planning and development may impact state highway facilities. To comply with SB 743 implementation, the Caltrans Transportation Impact Study Guide (Caltrans 2020) replaced the Guide for the Preparation of Traffic Impact Studies (Caltrans 2002). Per the 2020 Transportation Impact Study Guide, Caltrans' primary review focus is VMT, replacing LOS as the metric used in CEQA transportation analyses. Caltrans recommends use of OPR's recommended thresholds and guidance on methods of VMT assessment found in OPR's Technical Advisory (OPR 2018). In addition to VMT, Caltrans has developed the Caltrans Local Development Review (LDR) Safety Review Practitioner's Guidance (Caltrans 2024), which may request a targeted operational and safety analysis to address a specific geometric or operational issue related to the state highway system and connections with the state highway system.

Since the permanent operation of the project is expected to generate a nominal number of trips, there are no long-term operational issues anticipated and no further analysis required.

California Vehicle Code

The CVC consists of a comprehensive set of laws and regulations that govern the operation and use of vehicles on the roadways within the State of California. Specifically, the CVC addresses traffic regulations, driver's licensing, vehicle registration, vehicle equipment, safety regulations, parking and towing, commercial vehicle standards, environmental regulations, and penalties and enforcement.

Project vehicular transportation would comply with all applicable federal, state, and local regulations, including the CVC, and thus would conform with this requirement.

The following CVC and other code sections would apply to the proposed project:

- CVC Sections 13369, 15275, and 15278 address the licensing of drivers and classifications of licenses required to operate particular types of vehicles.
- CVC Sections 32100.5 addresses the transportation of hazardous materials that pose an inhalation hazard.
- Title 13 of the California Code of Regulations, Section 1160, et seq. provides the CHP with authority to adopt regulations for the transportation of hazardous materials in California. The CHP can issue permits and specify the route for hazardous material delivery.
- CVC Section 31303 stipulates that the transportation of regulated substances and hazardous materials are required to be carried out via the most direct route, using state or interstate highways whenever possible.
- California Streets and Highways Code Sections 660, 670, 1450, 1460 et seq. 1470, and 1480 regulate right-of-way encroachment and granting of permits for encroachments on state and county roads.
- California Streets and Highways Code Sections 117 and 660–711 and CVC Sections 35780 et seq. require permits to transport oversized loads on county roads. California Streets and Highways Code Sections 117 and 660–711 require permits for any construction, maintenance, or repair involving encroachment on state highway rights-of-way. CVC Section 35780 requires approval for a permit to transport oversized or excessive loads over state highways.
- Caltrans weight and load limitations for state highways apply to all state and local roadways. The weight and load limitations are specified in CVC Sections 35550 to 35559. The following provisions from the CVC apply to all roadways and are therefore applicable to this project.
    - General provisions: The gross weight imposed upon the highway by the wheels on any axle of a vehicle shall not exceed 20,000 pounds and the gross weight upon any one wheel, or wheels, supporting one end of an axle, and resting upon the roadway, shall not exceed 10,500 pounds.
    - The maximum wheel load is the lesser of the following: (a) the load limit established by the tire manufacturer, or (b) a load of 620 pounds per lateral inch of tire width, as determined by the manufacturer's rated tire width.
    - Vehicles with trailers or semi-trailers: The gross weight imposed upon the highway by the wheels on any one axle of a vehicle shall not exceed 18,000 pounds and the gross weight upon any one wheel, or wheels, supporting one end of an axle and resting upon the roadway, shall not exceed 9,500 pounds, except that the gross weight imposed upon the highway by the wheels on any front steering axle of a motor vehicle shall not exceed 12,500 pounds.

As discussed in Sections 3.12.6 and 3.12.7, the project would comply with the applicable provisions of the CVC and apply for required transportation and encroachment permits from the agencies.

3.12.5.3 Local

This section reviews compliance with all relevant local LORS without regard to their applicability as a matter of law.

Santa Cruz County Regional Transportation Commission Regional Transportation Plan

The Santa Cruz County Regional Transportation Commission Regional Transportation Plan is a state-mandated, long-range planning document that serves as a guide for future transportation funding decisions (SCCRTC 2022). The Regional Transportation Plan outlines transportation challenges and establishes investment priorities for all of Santa Cruz County. The plan includes lists of transit, highway, local road, bike, and pedestrian needs in the region and estimates the amount of local, state, and federal dollars that may be available for these projects over the next 20 to 25 years. The plan is updated every 4 years to reflect the latest funding estimates and project needs. The 2050 Regional Transportation Plan is currently underway and scheduled for adoption in June 2026.

Santa Cruz County General Plan Access and Mobility Element

The Access and Mobility Element is intended to be the key policy statement of the County regarding transportation facilities and programs serving the unincorporated areas. The following principles guide the Access and Mobility Element (County of Santa Cruz 2024a):

> Transportation Choices. Develop safe, reliable, and efficient transportation choices to improve air quality, reduce greenhouse gas emissions, promote public health, and enhance quality of life. Recognize that specific strategies to promote transportation alternatives will vary depending on the unique characteristics of different places.
>
> Unique Community Character. Enhance the unique characteristics of communities by investing in healthy, safe, attractive, and walkable neighborhoods and efficient transportation choices between communities. Focus County investment within existing communities to increase community vitality, provide infrastructure efficiently, increase mobility, and promote social connections while protecting open space and existing community assets.
>
> Governmental Coordination. Align policies and funding among local, County, regional, and State governmental agencies, including schools and colleges. Remove barriers to collaboration, leverage funding, improve local control over local resources, and increase the effectiveness of all levels of government that impact growth and development in Santa Cruz County. Improve financial sustainability of city and county governments, especially given the loss of redevelopment financing for local infrastructure projects.
>
> Fiscal Sustainability. Recognize that there is a significant gap between the level of governmental revenue that is generated by the existing land use pattern in Santa Cruz County and the level that is needed to sustainably fund necessary public facilities and services. Promote development patterns and specific land uses that generate revenues to provide the infrastructure and services necessary for thriving communities. Recognize that economic development projects help fiscal health by generating revenues that enable high quality public services.

The following goals and policies applicable to the project are presented below (County of Santa Cruz 2024a).

Goal AM-1.0 Manage Travel Demand + Reduce Greenhouse Gases. Reduce automobile trips and VMT by increasing the use of non-drive alone transportation modes through an effective transportation demand management (TDM) program and land use planning that reduces the distance people need to travel for jobs, goods and services.

Objective AM-1.1 Vehicle Miles Traveled + Greenhouse Gas Emissions. To respond to climate change by reducing greenhouse gases in compliance with regional and state goals by reducing per capita VMT and encouraging clean air vehicle usage.

Policy AM-1.1.1 Vehicle Miles Traveled Impacts. Maintain a VMT threshold that best supports statewide and regional greenhouse gas reduction goals as determined by the best available data and modeling practices.

Goal AM-2.0 Complete Streets. Provide streets that are safe, comfortable, and convenient for all modes and people of all ages and abilities.

Objective AM-2.1 All Transportation Modes. To integrate "Complete Streets" improvements into the design, construction, and maintenance of the County's roadways to increase access and mobility for motorists, pedestrians, bicyclists, and transit users.

Goal AM-6.0 Transportation System Maintenance + Operations. Maintain the existing transportation system cost effectively to maximize the utility of existing investments and protect public safety.

Objective AM-6.1 Maintenance + Safety. To prioritize improvements to transportation system efficiency and safety.

Objective AM-6.2 Level of Service. To design new development to minimize congestion, thereby increasing the efficiency of the transportation system.

Policy AM-6.2.1 Level of Service Criteria. Require development projects to provide multimodal roadway improvements necessary to achieve a minimum level of service (LOS) of "D," except for those where a lesser LOS has been accepted by the County pursuant to the criteria specifically identified in Table 3-2. When development is proposed on roads where a LOS E or F standard has been accepted, require feasible mitigation in the form of road improvements, a fair share contribution to a road improvement program, or other in-lieu mitigation for the transportation system.

Goal AM-3.0 Equitable Access (EJ). Improve transportation access and mobility opportunities for disadvantaged communities to access jobs, goods, nutritional food, healthcare, services, and parks through integrated land use and transportation planning.

Objective AM-3.1 Enhance Transit (EJ). To work with regional and local public agencies to increase transit service and frequency connecting disadvantaged communities to jobs, goods, food and services.

Objective AM-3.2 First + Last Mile Gaps. To address first and last mile gaps to access transit service through active transportation improvements and services.

Santa Cruz County Active Transportation Plan

The Santa Cruz County Active Transportation Plan (County of Santa Cruz 2022) was completed in 2022 and consolidates all bicycle and pedestrian-related County plans and projects that are currently identified in the County General Plan, the Santa Cruz County Regional Transportation Commission Regional Transportation Plan, and other local documents. It is intended to aid County planners and engineers in selecting and implementing specific bicycle and pedestrian projects and improvements with the goal of increasing bicycling, walking, and safety within unincorporated County lands. The Active Transportation Plan is consistent with and implements action statements of the Access and Mobility Element.

Santa Cruz County Airport Land Use Compatibility Requirements + County Strategy

The County's Airport Land Use Compatibility Requirements + County Strategy (Appendix H of the General Plan) (County of Santa Cruz 2024b) provides context for the policies and implementation measures contained in General Plan Objective BE-5.4: Airport and Airspace Land Use Compatibility and Safety, specifically regarding the County's approach to meeting statutory requirements for an airport land use compatibility plan for Watsonville Municipal Airport. The basic function of airport land use compatibility policy in the County is to promote compatibility between the Watsonville Municipal Airport and existing and future land uses in the unincorporated areas of the County that surround it, to recognize the extent to which these areas may already be developed with incompatible uses, and to comply with state statutes, regulations, and other laws governing land uses surrounding the airport.

An AIA is the area or areas in which current or future airport-related noise, overflight, safety, and/or airspace protection factors may significantly affect land uses or necessitate restrictions on land use. According to Public Utilities Code Section 21675.1(b) the AIA must encompass land within 2 miles of the boundaries of the Watsonville Municipal Airport. Land use compatibility concerns to be addressed within the AIA fall under two broad headings identified in state law: noise and safety. However, for purposes of formulating compatibility policies and criteria, further dividing these basic concerns into four functional categories is more practical. These categories are (1) exposure to aircraft noise, (2) land use safety with respect both to people and property on the ground and the occupants of aircraft, (3) protection of airport airspace, and (4) general concerns related to aircraft overflights.

3.12.6 Agencies and Agency Contacts

Several agencies regulate traffic and transportation and would be involved in regulating transportation, including transportation of hazardous materials, to and from the project site. Regulatory agency contacts are shown in Table 3.12-12.

Table 3.12-12. Permits and Agency Contacts

Permit or Approval	Agency Contact	Applicability
Transportation Permit for Oversized Loads	Caltrans Permit Officer on Duty, Caltrans, Transportation Permits Issuance Branch 916.322.1297 Santa Cruz County Department of Public Works, Transportation Permits Transportation@santacruzcounty.us 831.454.2385	Yes

Table 3.12-12. Permits and Agency Contacts

Permit or Approval	Agency Contact	Applicability
Hazardous Materials Transportation License	California Highway Patrol Hazardous Material Licensing Program 916.843.3400	Yes
Santa Cruz County Haul Route – Encroachment Permit	Santa Cruz County Department of Public Works, Transportation Permits Transportation@santacruzcounty.us 831.454.2385	Yes

3.12.7 Permits and Permit Schedule

Table 3.12-13 lists the permits related to traffic and transportation and the permit schedule. The vehicles used to transport heavy equipment and construction materials would require transportation permits when they exceed the size, weight, width, or length thresholds set forth in Section 35780 of the CVC, Sections 117 and 660–711 of the California Streets and Highways Code, and Sections 1411.1 to 1411.6 of the California Code of Regulations. Affected vehicles would be required to obtain transportation permits from the County, Caltrans, or from any other affected agency. Transport route arrangements would be required with Caltrans and CHP officials for permitting and escort, as applicable. Transportation of hazardous materials to and from the project would be conducted in accordance with CVC Section 31303.

Table 3.12-13. Permits and Permit Schedule for Transportation

Permit	Schedule	Status
Single/annual-trip transportation permit for oversized loads and oversized vehicles	Obtain when necessary, 2-hour (single trip) to 2-week (annual trip) processing time.	Will be obtained prior to construction
Hazardous Materials Transportation License	Obtain when necessary, approximately 2-week processing time	Will be obtained prior to construction
Encroachment Permit	Obtain when necessary, approximately 2-week processing time	Will be obtained prior to construction
