## **Please don't allow this data center**

Hello,

I am deeply saddened to hear of plans to install a data center in Inyo county. I live in neighboring Mono county, but I work and recreate often in Inyo county, and consider its residents to be part of my immediate community.

Our region has already faced so much environmental hardship over the last century, and I honestly cannot believe our state would even consider allowing this development that would strain this areas natural resources even more. We have already seen all over the country examples of how data centers are using up so much water, wreaking havoc on nature and people alike. Not to mention the detriment it will cause to other parts of the desert ecosystem, for whom water is a precious and fragile resource. Additionally, it is unlikely that this will improve the lives of the regional residents, but rather put more money in the pockets of people who do not care at all about Inyokern, or the earth, or regular people for that matter. In this ever developing world, can we really afford to put more resources towards extremely destructive and unsustainable plants such as this? As a California tax payer, I am horrified to think of my taxes going towards this. Please consider the earth, and the people. We have seen enough from these data centers to know this is no good.
