New lithium-ion phosphate batteries are not proven to be safe enough

Even the new lithium-ion phosphate batteries are not proven to be safe enough to be placed in crowded neighborhoods with farms, schools, and waterways nearby. The environmental and human affects from the Moss Landing Plant are being studied and long term effects are still to be revealed. Don't contribute to adding to this untested and unreliable technology. People deserve protection from our government agencies. If not you, who? Please deny the Seahawk Project permit. Thanks for listening.
