No Data Centers

I am not sure these data centers are exactly what you use them for. Why would you bring a data cooling center to the middle of the desert that reaches 115 degrees with very limited water supply? We already are taxed for a water pipe line that the ground authority claims we need. So why bring something that uses up to 5million gallons of water per day to our little town? Not only that but our naval base has their cooling system underground. Why would we cool them with water?? This whole data center talk has me very worried for our community! There are too many reasons to list why this is a bad idea for our community. Water, electricity, air quality, and most of all the false agenda for these data centers. Please go somewhere else!!
