STACK SVY03A Data Center Campus

I am opposed to the proposed Data Center Campus in Hayward. It is bad for the environment, bad for water quality and bad for the health of the citizens of Hayward.

The following items are also concerns:

Energy Consumption. High energy usage contributes to significant environmental impact and escalating costs for surrounding communities.

Water Usage Cooling systems often require substantial water resources, straining local water supplies and ecosystems.

E-Waste Frequent hardware upgrades and replacements generate significant volumes of electronic waste.

Location Risks Natural disasters, flooding, or geopolitical instability can disrupt operations and impact local infrastructure.

Scalability & Efficiency Growing demand strains local resources and infrastructure, often outpacing community planning capacity.

Noise Constant humming from cooling systems, generators, and substations can disrupt sleep, daily life, and wildlife in surrounding neighborhoods.

This is not acceptable.
