Tires

Hello,

as usual a corporate driven solution has been provided to control vehicle emissions in CA. The proposal seeks to nearly eliminate off road tire sales in CA, while simply driving cost of automotive consumables up. Normally I am in favor of reducing emissions, but this proposal doesn't do that. Instead it reduces the grip of replacement tires, making them less safe, shortens tire life, and nearly eliminates availability of off road use tires.

Stop selling exemptions to manufacturers who make gross polluters, making attacks on aftermarket products, and focus on things that can significantly reduce emissions.
