Zero-Carbon Modular Housing

I am writing to request that EPIC 5 support and prioritize zero-carbon modular housing as a scalable clean-energy deployment platform.

Offsite construction, including modular building methods, can help deliver more attainable, efficient, and resilient housing. When paired with solar, battery backup, and heat pump technology, modular housing offers a repeatable way to integrate clean-energy systems from the start.

EPIC 5 should provide funding for research, development, and demonstration of zero-carbon modular housing so California can better scale clean, resilient housing across more communities.
