Supporting zero-carbon modular housing

I encourage EPIC 5 to support zero-carbon modular housing as a practical way to connect California's housing and clean-energy goals. By moving more construction offsite, modular housing can reduce delays, improve consistency, and make it easier to include solar, battery backup, heat pumps, and other efficiency measures as part of the home from the start. Funding research and development in this area would help validate a model that can deliver cleaner, more resilient housing at greater scale.
