## **Concerns of a Citizen**

Hello, I am concerned with this new tire efficiency regulation. I understand the concern with efficiency, but I believe this regulation will do more harm than good. This will limit consumers choices of tires for all vehicles, including EVs, and will actually increase the amount of tires in landfills.

There are much better ways to achieve similar goals without restricting the public. For example, if you have the "correct tires" but an incorrect psi that would actually defeat the purpose of this. We could push for more testing on TPMS systems to make sure people run at the right PSI in an encouraging manner rather than banning aftermarket tires that are just as efficient.

Let's have encouraging regulation, like incentives such as tax breaks for fuel efficient tires rather than a blanket ban.
