Limiting consumer choice and destroying jobs

Hello, I am writing regarding the CEC proposal 26-TIRE-01. I don't know what is prompting this law To come to the floor now, but I can guarantee it does not have the consumers best interest in mind. From my perspective, I see this has only benefiting a select few tire makers who will have a monopoly on selling their OE quality tires. But there are many reasons to buy other aftermarket tires, whether that is for comfort, tread life, climate specific tires like snow tires, or off-road or track use or budget conscious reasons. I strongly oppose this law. I ask that you consider the thousands of jobs that this would impact and the effect on the consumers choice. From my perspective with all of the laws in California as it is, It is clear at California does not care about it citizens and it puts poor people in dangerous and financially vulnerable positions. So instead of doing this, why don't you fix homelessness or make the state just a little bit more livable reduce taxes or implement health care for all like Oregon did.
