Consider the Negative Hazardous Impact of the BESS Plant

It is time to take action and stop the proposed Bess Lithium Battery Plant on the residential neighborhood Minto Rd. Please consider the extreme fire risk of the thermal runaway of these extremely flammable battery plants. See the information in this link <https://eticaag.com/thermal-runaway-in-battery-energy-storage-systems-bess/> The firefighters have already been informed not to respond if there when a fire occurs. They were told to just let it burn. The toxic waste and the water would be detrimental. Minto Rd. is highly residential with a community garden local schools and local agriculture that provides food not only to the Santa Cruz County but a wide distribution around the US and the world growing fruits and vegetables such as berries, apples, Martinelli apple juice, etc.
