Wholehearted Opposition to the Data Center, on account of a crucial detail, The noise

On top of all the environmental factors detailing why this project is a bad idea for the local counties, It's irrefutable that Data Centers provide an almost Unbearable amount of constant noise on account of just the Cooling fans alone. Such unbearable noise is not only guaranteed to drive the local communities insane (without even factoring noise sensitive groups, like me and other people on the Autism spectrum), but it can also lead to Disastrous consequences on the local wildlife, like a HUGE surplus of stillborn animals on local farms. This would not only threaten the livelihood of the People living near the center, but without a doubt, it threatens the livelihood of the animals that make their homes in the surrounding deserts. And all that is without mentioning the effects of the heat that Necessitates those noisy fans, and that the data center needs to be drilled into the ground to gain access to our water. That heat is gonna spread, and if the noise isn't killing the animals, it's gonna be the heat. This project CANNOT go through, otherwise it will completely Destroy two thriving cities, and lead to a LOT of class action lawsuits from angry citizens, meaning more money lost in class action suits than it took to build the center in the first place. From an environmental, agricultural, And a financial standpoint, this project is a Failure from the onset
