Opposition to RB Inyokern Data Center

I strongly oppose building data centers in any desert spaces, specifically Inyokern. These are unnecessary and go against my principals as an avid outdoorsmen. Keep them out of Inyokern and keep them out of the entire desert stretch. The land is already being decimated by solar farms. This doesn't help the people of Inyokern and doesn't help anyone who enjoys the open spaces left in the great deserts of the West Coast. The reasons in opposition are plentiful and I don't need to belabor the point as I'm sure many people smarter than me can more clearly define the environmental impact. Keep the desert open. Do not build a short term project like a data center for companies with deep pockets and no link to the local area. Stand up for the locals.
