Proposed Inyokern Data Concerns

I am concerned about the many health risks associated with this proposed data center. The audible sounds cause anxiety which can lead to heart issues. Infrasound emitted by data centers can adversely affect everyone within a couple of miles. Inyokern school would be 1440 feet away. This unheard sound is felt as pressure or vibration and can lead to behavioral problems, learning and concentration issues. Infrasound also adversely affects wildlife since they can hear it and their habitats will be destroyed. Other data centers have reported higher incidences of respiratory issues from emissions and fires. The constant light emitted alters the circadian rhythm and lowers the production of melatonin. Sleep patterns will be destroyed, and cortisol levels will rise. The many health risks are not worth it, and we should not be forced to have something that will rob us of our health. Do data centers carry insurance because as far as our health they are a liability. Please do not approve this proposed data center not only for the above reasons but also for the water, utility, temperature issues as well. Respectively yours, Robin Blair
