## **Vaca Dixon Power Center Battery Energy Storage System**

Hereâ€™s a concise, respectful opposition statement you can submit. It focuses on safety and process rather than making claims that may require proof.

I am writing to express my opposition to the proposed Vaca Dixon Power Center Battery Energy Storage System (BESS).

While I recognize the importance of modernizing our electrical grid and expanding energy storage, these projects must be located and designed in a manner that prioritizes public safety and community well-being.

I am concerned about the proposed location because of its proximity to homes, businesses, transportation corridors, and water resources. Given the potential consequences of battery fires or other system failures, I believe these risks deserve careful consideration before any approval is granted.

I also ask the Commission to carefully evaluate whether the project is consistent with local ordinances, zoning, and the intent of our communityâ€™s safety standards. If state approval would override local protections, that decision should only be made after a thorough, transparent review supported by clear evidence that public health, emergency response capabilities, and environmental resources will be adequately protected.

Please require a comprehensive evaluation of fire risk, emergency response planning, evacuation procedures, water impacts, and cumulative environmental effects before considering approval. If these concerns cannot be satisfactorily addressed, I respectfully request that the application be denied or that the project be relocated to a more appropriate site farther from residential areas and sensitive infrastructure.

Thank you for considering my comments and for protecting the safety and interests of the Vacaville community.
