Docket number 24-OIR-03 - Energy Data Collection - Phase 3

Commissioners re: Docket 24-OIR-03,

AdTo the California Energy Commission,
I am the owner of a small residential HVAC company serving customers in San Diego County.

I respectfully ask the Commission to reconsider the proposed statewide HVAC and water heating equipment tracking system. While I support energy efficiency and responsible industry standards, I am concerned that this proposal will place additional administrative burdens on small businesses like mine.

My company is focused on serving homeowners quickly and safely. Additional reporting requirements will increase office work, operating costs, and the time required to complete installations. Small contractors do not have large administrative teams, so every new reporting requirement takes time away from serving customers.

These added costs will likely be passed on to California homeowners through higher installation and service prices. At a time when many families are already struggling with the cost of replacing heating and air conditioning systems, I believe we should be reducing unnecessary burdens, not creating new ones.

I encourage the Commission to consider solutions that achieve California's energy goals without imposing additional reporting requirements on small HVAC businesses.

Thank you for considering my comments and for supporting both California consumers and the small businesses that serve them.

Sincerely,

Pedro Ruiz
