Data Center Support

I am writing to express my support for the RB Inyokern Data Center project proposed for the Inyokern area of Kern County.

I understand both the technical requirements of siting this kind of infrastructure and the economic development stakes for the communities that host it.

That economic case is especially pressing in Inyokern right now. The recent bankruptcy filing of SVM and the resulting loss of jobs in the area have removed a significant source of local employment and tax base.

A project of this scale would bring meaningful construction employment, long-term operational jobs, and a durable local tax contribution at a moment when the community needs exactly that kind of reinvestment.

I urge the Commission to approve this project, and I am glad to provide any additional perspective on data center development or infrastructure reuse in the region if it would be useful.
