RB Inyokern Data Center

Please do an environmental assessment before permitting m this project! In 2014, the Indian Wells Valley was put under a Goundwater Authority commission, IWVGA, due to the claim by the state water resources that we were "over drafting" our aquifer. They have proposed a multi-million dollar pipeline that would bring water from somewhere south of us to meet future needs. Not sure where that water is suppose to come from.

Now this company wants to come in and build a huge data center, which would severally impact that aquifer. This is insane! I am not the only one in Ridgecrest and Inyokern that does NOT want his facility in our valley. I am positive that a significant majority of the residents do NOT want this to be built. I have spoken with other residents, including local contractors. NOone wants this. The proposed 1600+ jobs are temporary out of the valley construction workers who do not live here nor pay taxes here nor will have to live with the pollution of 40 diesel powered generators and the loud, continuous noise this data center will produce.

In addition to the impact to the ground water of the valley, there are several endangered species in the area. An assessment of the impact of this facility on them needs to be done.
