A push to far for minimal result

This isn't the way to meet Gail for the state in an already high at a time considering that we already have a special blend of gas high taxes on our gas are the most heavily enforced state regulated for carbs and smog, adding an upfront cost of tires is more than not justifiable due to its upfront cost and putting minority groups into a disadvantage as well as disadvantaging corporations that already have a stocked only this this competition and as well as heavily regulate something that did not need to regulate to this degree. The minimal gain from this is so my new that it's upfront cost to impact is just non-justifiable to this. I wish that this motion does not pass and it dies here once and for all.
