I am submitting this comment to express my strong opposition to the California Energy Commission's Proposed Replacement Tire Eff

While I support reasonable efforts to improve efficiency and reduce emissions, this proposal creates significant practical, financial, and operational burdens for California residents without delivering benefits proportional to its cost. The regulation attempts to control an extremely diverse and complex replacement-tire market through rigid statewide standards that do not reflect real-world needs, driving conditions, or consumer priorities.

I urge the Commission to reconsider this proposal, conduct additional real-world impact analysis, and pursue alternative strategies that do not restrict tire availability or impose unnecessary burdens on California drivers.

Thank you for considering my comment.
