Docket number 24-OIR-03 - Energy Data Collection - Phase 3

Commissioners re: Docket 24-OIR-03,

To whom it may concern; this new propose requirement for equipment tracking only creates a burden to the people who are doing things correctly. If you truly want to track where Equipment is going and being installed, there are better alternatives than what you are proposing. The homeowners and/or and end user of products need to be part of the responsibility to make sure that these permits are being filed. You need to give incentives to the end user so that permits are filed.

Always adopting a police state proposal to oversee contractors will only cause more burden and cost to the end. User the customer.

There are already entities in place to track where contractors are failing to pull permits i.e.; the contractor's licensing board, county, and city, inspections and whistleblower that see contractors doing work without a permit.

Please do not burden suppliers and contractors with more bureaucracy. We are already living on the edge of financial collapse.

I urge you to see alternative means to find a way to accomplish what you are looking for.

And that is contractor and end user responsibility. Making incentives for people to do the right thing always goes farther than trying to punish us. Marc Apodaca
