

DOCKETED

Docket Number:	26-IEPR-03
Project Title:	Electricity and Gas Demand Forecast
TN #:	272024
Document Title:	Presentation - Load Energization Requests (Known Loads)
Description:	03._Sanada_-_Known_Loads_CEC
Filer:	Raquel Kravitz
Organization:	California Energy Commission
Submitter Role:	Commission Staff
Submission Date:	8/18/2026 10:06:25 AM
Docketed Date:	8/18/2026

Load Energization Requests (Known Loads)

Cristy Sanada

2025: Assessing Known Loads

What are Known Loads?

- Energization requests at the distribution system level
- Project-level data from each Investor-owned utility

Potential Reliability Risks

- Gap between transmission and distribution planning
- Backlog of projects that exceed growth in the IEPR forecast

Other Considerations

- 2025 was the first year that CEC has used the known load data
- Lack of historical record
- Interaction with CEC modeling
- Balance resource procurement obligations with grid planning

2025: Estimating Known Load Impacts

Relied on Data and Assumptions from IOU distribution planning teams

Planning Challenge

Distribution and System Planning are Related

2026 Priorities and Questions

- Ongoing discussions with IOUs, CPUC, and CAISO
- Assess AMI data for completed known loads
- Key questions:
 - Do CEC's forecast products already account for the load growth that known loads represent?
 - Does applying known loads as a distinct adjustment to the forecast risk double counting load?
 - Have known load energizations in recent years resulted in increases in system demand?
 - Are recent load trends a good indicator of the next few years?
