Oppositon to Lithium Ion Batteries

The State of CA has a ban on plastic bags due to pollution and release of toxins, a ban on assault rifles because they kill people and to ensure public safety, and regulations that eliminates the use of 70% of tires to improve air quality. Many cities throughout our State including Vacaville also have bans on fireworks due to the high risk of fires. I don't understand why the CEC is considering the use of lithium ion batteries knowing that they highly pose all of the above threats to its people and present eminent danger. From day one Vacaville has expressed opposition to these batteries and requested that they use a safer battery that does not catch fire, contaminate our agricultural land and water sources, and does not poison our lungs and organs which can and will lead to death for some. CORBY has not been willing to compromise in any way, shape or form to ensure the safety of our people/community. Achieving renewable energy is important, but the safety and health of the people and our environment is more important and it can be done without the use of these toxic batteries. The CEC is in a position to do right by the people and eliminate the threat of these batteries. Please deny the CORBY project. If you can ban tires, you surely can place a ban on lithium ion batteries and prioritize health and safety over profits.
