Support of BESS Project

I am writing in support of this project. As our power infrastructure needs to be updated & modernized, projects like this will encourage more use of solar and storing said power for evening use, reducing dependence on the grid. There are fire suppression technologies built in to the batteries to stop thermal runaway events at the start, reducing the chance for a wildfire as opponents claim. This project is needed because if we do not make the investments & changes now, we are setting ourselves up for future failure.
