Opposed to the BESS

I strongly oppose the proposed Corby Battery Energy Storage System project in Vacaville. This project is not in the best interest of our community.

Placing a massive lithium-ion battery storage facility on prime agricultural land, so close to Kaiser Hospital, I-80, I-505, and nearby homes, creates serious concerns about fire, toxic smoke, water contamination, and the safety of our families, first responders, patients, and entire community.

Our local residents and elected officials have spoken up because we live here and understand what is at stake. Solano County should not be treated as a place to put a high-risk facility simply because another community will receive the energy benefits.

We should not have to accept the possibility of a catastrophic fire or long-term environmental damage in exchange for a project that does not primarily benefit our community. Once something goes wrong, we cannot simply undo the damage.

I am asking the California Energy Commission to listen to the thousands of concerns raised by local residents and to put the health, safety, environment, and future of the Vacaville-Dixon community first.

Please do not approve the Corby Project at this location. Our community deserves better, and we deserve to feel safe in our own homes. Keep Vacaville and Solano County safe.

The Green Family
