Docket Number: 24-OPT-05

A good example of the Peter Principle

Let's review an idiotic idea and pretend it deserves consideration:

Technology: Lithium - Ion

This is a flawed and dangerous technology that has led to batteries exploding resulting in severe injuries and land fill fires since only 5% of these batteries can be recycled.

The mining of lithium has caused damage to the area where it has been mined, polluting the water supply and releasing toxins into the soil

Location : Prime agricultural land near residential housing; a lithium fire is extremely difficult to control and extinguish.

Finally a EIR report that is sloppy and unworthy of being called an environmental review.

You were appointed by a governor whose presidential ambitions are being funded by these wealthy interests !

Why aren't you embarrassed ?
