Oppose

I strongly oppose the proposed Corby plant.

Our small family farm is located very close to the proposed Corby site. This is not simply land on a map—this is our home, our livelihood, and the place where we are raising our family. We are also surrounded by many other small family farms, ranches, homes, orchards, and animals that could be directly affected by this facility.

We depend on our soil and groundwater to sustain our way of life. Our family relies on well water for our home, our orchards, our crops, and our animals. Any potential threat to the quality or safety of that water—or to the health of our soil, air, animals, and families—is simply too great a risk.

Please ask yourself: Would you want a facility like this located in your own backyard, near the water your family drinks and the land that produces your food?

We do not want it in ours.

The potential cost to the families, farms, animals, and agricultural land surrounding the Corby site is too high. Once groundwater, soil, or productive farmland is harmed, the consequences can extend far beyond a single property and can last for generations.

Most importantly, there is an alternative. The Rio Vista site is already located in an area zoned for industrial use and is far better suited for a facility of this nature. If the same goals can be accomplished at a location that poses less risk to established homes, family farms, agriculture, and human life, then that alternative should be chosen.

Please protect the families and farms that are already here. Protect our groundwater, our agricultural land, our animals, and our ability to continue farming and living safely on the land we call home.

Please reject the Corby site and choose the Rio Vista site instead.
