Oppostion and Inquiry Letter

Additional submitted attachment is included below.

To the board members of the CEC,

We understand that your decision to approve the location of the BESS is based on your review of the multiple sources of data. This information is based on predications and presented as the best-case scenario. Many variables can contribute to miscalculations and errors. We are not specialists in this area of science but we are being asked to trust the data. You are presented with data and have the responsibility to decide if the risks outweigh the benefit. It's a decision that could have significant consequence if the data/reports are wrong.

We have just a few questions for those making this final approval.

Would you feel confident with the data, scientific evaluations and recommendations for your loved ones to live as close in proximity as across the street and next door to the Kilkenny/Byrnes BESS project?

Would you personally feel safe to live a mile from this site?

This is our parents' neighborhood and we sincerely would like to know if this level of risk is one you would take with your loved ones.

If something were to happen to your family, how would you expect to be compensated for your loss?

Please answer this truthfully.

Thank you for your consideration.

Sophia Valentino, Gianni Valentino, Andrew Milani, Christopher Milani
