Battery Storage

Hello....

I decided to wait until today to write this...although there is nothing I can say to you that you have not already heard....I guess all of this is something I am not capable of understanding...I understand that we need battery storage....I understand there are safe and unsafe alternatives to storing certain types of materials used to perform this process....what I don't understand is why there is such a fight to get this process going in a acceptable way...Lithium can be used at a safe site....Lambies...there will be no need for a 14 mile line when a drop line can be used...saves money....If Corby's would have just accepted these terms they would be generating battery storage right now...as you are reading this...instead they...lets say.. stick up ??....they would be sending that power to San Francisco and making bank now...instead they are spending and wasting their money on this ignorant and stupid adventure of theirs....and wanting to put in right in front of a gorgeous Victorian home on our beloved agriculture land....anyone who approves this should be made to live in that home and eat the food grown in that soil...Because that is exactly what a yes vote for this project is taking away from the folks that live in that area and beyond...Lambies is safe and cheaper for Corby;s if they get off their a.. and accept that they may not care about Vacaville but the folks here sure do....this project is nothing but a farce and cry out to let you folks know just how irrational those folks at Corby's are...

I understand we need battery storage

I don't understand why we have to fight to keep it safe...when safety is easy to do

Thank You
Pam Barringer
