USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquiries (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeyman:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other common reasons for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumeric designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

**Subject: Pesticide Soil Sampling Report
5977 and 6001 Silver Creek Valley Road, San Jose, California**

Dear Mr. Bernstein:

Apex Companies, LLC (Apex) has prepared this Pesticide Soil Sampling Report (Report) documenting the results of a shallow soil investigation completed for Duke Realty (Duke) at the property located at 5977 and 6001 Silver Creek Valley Road in San Jose, California (the Site, Figure 1). The results of a Phase I ESA completed by Apex in September 2021 revealed that the Site was formerly used for agricultural purposes from at least 1939 until sometime between 1982 and 1998. It is Apex's understanding that Duke is planning to redevelop the Site. Accordingly, the objective of the shallow soil investigation was to evaluate shallow soil for the presence of organochlorine pesticides and associated metals (arsenic and lead) related to its historical agricultural use, as required by the City of San Jose in connection with site redevelopment.

SITE DESCRIPTION

The Site is comprised of two parcels identified as Santa Clara County Assessor's Parcel Number (APN) 679-02-011 and 679-02-012 and encompasses approximately 15.12 acres. The Site is currently vacant. Duke plans to redevelop the Site with a warehouse.

SCOPE OF WORK

The scope of work included the advancement of five soil borings to a maximum depth of one foot below ground surface (bgs) on the Site. The objective of the investigation was to collect a soil sample from each boring to evaluate shallow soil for the presence of organochlorine pesticides and associated metals (arsenic and lead) related to former agriculture use.

Pre-Field Activities

Pre-field activities included preparation of a site-specific health and safety plan. Prior to initiation of field activities, proposed drilling locations were marked on the Site. Since the soil borings were planned to a depth of only one foot, no permits were required by the Santa Clara Valley Water District.

Field Work

Five soil borings (SB-1 through SB-5, Figure 2) were advanced on the Site to a maximum depth of one foot bgs. The soil borings were advanced using a hand-auger equipped with a 3.25-inch outside diameter bucket. A six-inch soil sample was collected from each boring between a depth of 0.5-foot bgs and 1 foot bgs for chemical analysis. Soil samples were collected in 16-ounce glass jars appropriate for the requested analyses. As required by the City of San Jose, soil samples were analyzed for following contaminants of concerns:

- Organochlorine pesticides by United States Environmental Protection Agency (USEPA) Method 8081A; and
- Arsenic and lead by USEPA Methods 6010B/7471.

Following sample collection, each soil boring was backfilled with soil cuttings.

In between boreholes, downhole sampling equipment was decontaminated using phosphate free soap and water.

RESULTS

Soil sample results were screened against the San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) Environmental Screening Levels (ESLs) for human health direct contact under commercial and construction worker exposure scenarios. In addition, arsenic results were compared with background levels obtained from the document entitled *Establishing Background Arsenic in Soil of the Urbanized San Francisco Bay Region* (Duvergé, 2011). Lead results were compared with background levels obtained from the document titled, *Background Concentrations of Trace and Major Elements in California Soils* (UC, 1996). A copy of the laboratory analytical report is included in Attachment 2. A summary of the soil analytical results is provided in Table 1. Results are presented below.

Arsenic and Lead Results

Arsenic and lead were detected in all five samples at concentrations above laboratory reporting limits (RLs). Arsenic was detected at concentrations that ranged between 8.2 milligram per kilogram (mg/kg) (SB-5-1) to 10 mg/kg (SB-2-1). Lead was detected at concentrations that ranged from 10 mg/kg (SB-4-1) to 18 mg/kg (SB-2-1 and SB-3-1). Of the metals detected, only arsenic exceeded its respective ESL for human health direct contact under the commercial and construction worker exposure scenario values of 0.31 mg/kg and 0.98 mg/kg, respectively (which exceedance is typical for naturally-occurring arsenic-containing soil throughout the State of California). However, arsenic concentrations were all below the established naturally-occurring background concentration of 11 mg/kg and, therefore, the detections are attributed to naturally-occurring background conditions.

Organochlorine Pesticide Results

Of the pesticides analyzed, 4,4-dichlorodiphenyldichloroethylene (4,4-DDE) and 4,4-dichlorodiphenyltrichloroethane (4,4-DDT) were detected in one or more samples at concentrations above laboratory RLs.

Of the detections, however, none exceeded their respective ESLs for human health direct contact under commercial and construction worker exposure scenarios.

CONCLUSIONS AND RECOMMENDATIONS

A total of five borings were advanced onsite resulting in the collection of five soil samples. Apex believes the scope of work was appropriate for purposes of evaluating the historical agricultural use of the Site. No arsenic or lead were not detected in any sample at concentrations above naturally occurring background concentrations. Organochlorine pesticides, including 4,4-DDE and 4,4-DDT, were detected in one or more samples at concentrations above laboratory RLs, but none exceeded their respective ESLs for human health direct contact under commercial and construction worker exposure scenarios. Residual organochlorine pesticide detections in shallow soil do not constitute an unacceptable risk to the commercial or construction worker receptors and, therefore, Apex recommends no further investigation regarding this issue.

Method 8081B: The following sample was diluted to bring the concentration of target analytes within the calibration range: SB-4-1' (320-86807-4). Elevated reporting limits (RLs) are provided.

Method 8081B: The following samples were diluted due to abundance of target analytes: SB-1-1' (320-86807-1), SB-2-1' (320-86807-2), SB-3-1' (320-86807-3) and SB-5-1' (320-86807-5). As such, surrogate recoveries are below the calibration range or are not reported, and elevated reporting limits (RLs) are provided.

Method 8081B: The following samples were diluted due to the abundance of target analytes : (320-86807-A-5-C MS) and (320-86807-A-5-D MSD). Because of this dilution, the surrogate spike and matrix spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method 8081B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for preparation batch 320-581180 and analytical batch 320-581609 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected.

Method 8081B: The %RPD between the primary and confirmation column exceeded 40% for 4,4'-DDT, cis-Chlordane and Heptachlor epoxide for the following samples: (320-86807-A-5-C MS) and (320-86807-A-5-D MSD). The primary column values have been reported and qualified in accordance with the laboratory's SOP.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

User Questionnaire

Subject Property: Silver Creek, 5977 and 6001 Silver Creek Valley Road, San Jose, CA 95138
Partner Project No. 25-511822.3
User Representative: **Brett Richer**
Title: **VP**
Date: **09/08/25**

Failure to provide this information could result in a determination that “all appropriate inquiry” has not been completed.

This document is designed to comply with Section 6 and Appendix X3, User Questionnaire, of ASTM E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, and the USEPA AAI regulations (40 CFR §312).

- 1) **Environmental cleanup liens that have been filed or recorded against the Subject Property (Part 312.25 of Title 40 of the Code of Federal Regulations [40 CFR 312.25]).**

Are you aware of any environmental cleanup liens against the Subject Property that have been filed or recorded under federal, tribal, state, or local law?

☐ Yes

☒ No

If **Yes**, explain and/or provide information:

- 2) Activity and land use limitations that are in place at the Subject Property or that have been filed or recorded in a registry (40 CFR 312.26).

Are you aware of any activity and land use limitation (such as engineering controls, land use restrictions, or institutional controls) that are in place at the Subject Property and/or have been filed or recorded in a registry under federal, tribal, state, or local law?

☐ Yes ☒ No

If **Yes**, explain and/or provide information:

- 3) Specialized knowledge or experience of the person seeking to qualify for the LLPs (40 CFR 312.28).

As the User of the Phase I ESA Report, do you have any specialized knowledge or experience related to the Subject Property or nearby properties? For example, are you involved in the same line of business as the current or former occupant(s) of the Subject Property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

☐ Yes ☒ No

If **Yes**, explain and/or provide information:

- 4) Relationship of the purchase price to the fair market value of the Subject Property if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this property reasonably reflect the fair market value of the Subject Property? If you conclude that there is a difference between the purchase price and the fair market value, have you considered whether the lower purchase price is because contamination is known or believed to be present at the Subject Property?

☒ Yes ☐ No

If **No**, explain and/or provide information:

5) Commonly known or reasonably ascertainable information about the Subject Property (40 CFR 312.30).

Are you aware of commonly known or reasonably ascertainable information about the Subject Property that would help the Environmental Professional to identify conditions indicative of releases or threatened releases? For example:

- a) Do you know the past use of the Subject Property?
- b) Do you know specific chemicals that are present or once were present at the Subject Property?
- c) Do you know of spills or other chemical releases that have taken place at the Subject Property?
- d) Do you know of any environmental cleanups that have taken place at the Subject Property?

☐ Yes ☒ No to all

If **Yes**, explain and/or provide information:

6) The degree of obviousness of the presence or likely presence of contamination at the Subject Property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

As the user of the Phase I ESA Report, based on your knowledge and experience related to the Subject Property, is there any obvious indicator(s) that point to the presence or likely presence of contamination at the Subject Property?

☐ Yes ☒ No

If **Yes**, explain and/or provide information:

7) Previous Environmental Reports.

Are previous environmental reports available for the Subject Property, provided by the User for review?

☒ Yes ☐ No

Returned to compliance on 05/05/2016. Solder/R&D Lab: The facility's current practice is to collect waste wipes and debris contaminated with solvents (acetone, photoresist, IPA, and solder flux) as hazardous waste in the red bins located throughout the facility. Waste Q-tips with a grayish discoloration and signs of use were observed in the non-hazardous, blue, recyclable trash bin. The solvent-contaminated q-tips were removed from the recyclable trash bin and deposited into a nearby red, hazardous waste bin at the time of inspection. ENSURE THAT ALL HAZARDOUS WASTE NEEDS TO BE COLLECTED, MANAGED, AS DISPOSED OF AS HAZARDOUS WASTE.

The POG accumulation containers are then combined for disposal at the facility's hazardous waste accumulation pad outside the building. The employees stated that the initial accumulation date marked on the hazardous waste accumulation area drums is the date in which the POG accumulation containers are transferred to the drum - not the initial date of accumulation at the point of generation (e.g. 10/6/2015). The initial accumulation date of the POG accumulation containers must accompany the waste to the hazardous waste accumulation area drums. The facility then has 180 days (assuming small quantity generator status) from the date in which the hazardous waste was transferred to the drum to dispose of the hazardous waste or 1 year from the initial accumulation date at the POG, whichever occurs first [22CCR 66262.34(e)(1)(B)]. Returned to compliance on 06/03/2016. 1. Each solder station has a plastic, 1L container that is used to accumulate lead solder waste. The plastic containers were observed to be open, even at the stations that are not currently being used. Additionally, one solder station in the Solder/R&D Lab has 2 x yellow, plastic ~3in. ~3in. containers that an employee uses to collect lead solder waste and contaminated solvent waste before adding it to the nearby solder waste container every 3-4 days. The yellow containers were observed to be open and with no feasible way to be closed when not in-use. 2. 4 x 200mL beakers were observed next to the laboratory "benchtop" treatment system. The beakers are open and un-labeled and a paper towel beneath the beakers stated "Will dump into bench top treatment system." The laboratory hazardous waste must be managed in accordance with applicable requirements for generators accumulating hazardous waste prior to treatment. Onsite to conduct a limited inspection & verify closure as required for the facility's Conditionally Exempt Tiered Permit. The walkthrough was conducted with Connie Carr-Jones the EHS Manager. The facility previously treated corrosive waste water generated from the quality assurance & failure analysis labs. During the inspection the hazardous waste treatment system was determined to be decommissioned. Connie indicated that the system has been disconnected from the sewer & locked out. The facility plans to decontaminate the system, manage associated wastes & remove the system from the site during phase II of the facility's construction which is expected to begin in mid February/early March of 2025. The facility has not yet decided on an alternative process to replace the current system. On-site to conduct a permit investigation due to unpaid permit fees in the amount of \$2,095.00. It was verified by Chris Brinkmann of Lelo USA that VNUS Medical (Covidien) no longer operates here. The new property owner is Vrelo Inc., and the building is currently being used as office space for marketing and sales activities. I confirmed with Mr. Brinkmann that there is no manufacturing or any hazardous materials being stored at this site at this time. If at any time in the future there are plans to do any R&D/ QA/ QC or assembly that would require a permit from our office, please contact us at 408-918-3400.; Note: data in [EVAL Notes] field for some records is truncated from the source.

NOTES TO FACILITY: 1. The red bin located in the machine shop area that is marked "empty daily" is not labeled with any other hazardous waste label information. The red bin was empty at the time of inspection. Ensure that the container is labeled with all hazardous waste label information when the container is in use. 2. Noted several types of solvent-based paints, primers, paint thinner, and epoxies in the paint shop area. Ensure that a hazardous waste determination is made for all waste items from the paint shop area, including any debris contaminated with paints, primers, and epoxies (e.g. cardboard, mixing sticks, wipes). 3. A 55 gallon drum labeled as wipes contaminated with isopropyl alcohol and toluene was observed on-site, but it is unclear as to how this wastestream is being identified on manifests. ENSURE THAT ALL WASTES ARE ACCURATELY IDENTIFIED ON UNIFORM HAZARDOUS WASTE MANIFESTS. 4. Returned to compliance on 05/06/2022. DUSTO inspection reports document vent sump low liquid level alarms for the sensor in the interstitial space on the following dates: 1/1/19, 1/2/19, 1/4/19, 1/26/19, 2/5/19, and 2/15/19. These alarms were noted on DUSTO Visual Inspection reports for January-March of 2019. March report also notes S11 sensor fault alarm on 1/26/19 for the 91 product pipeline vacuum sensor. DUSTO reports note that no maintenance records are available for any of these alarms and that "all alarms are currently cleared." This pattern of alarms indicates that there is a problem with the vent box transition sump causing regular loss of interstitial monitoring fluid. Glycol added to interstitial spaces must be added in accordance with the manufacturer's requirements and only by a certified UST Service Technician with proper documentation. Repeated additions of glycol is not a sufficient response to regular alarms that indicate a repair is required. Facility must take corrective actions to determine [Truncated]

Returned to compliance on 03/10/2023. Facility's last overfill prevention equipment inspection was done on 4/1/2020, but at that time, audible/ visual alarm was used as their overfill prevention mechanism. This is not acceptable due to the presence of only 1 annunciator. Today, the facility's 3 flapper valves were to be tested instead. NO FURTHER ACTION IS NEEDED, THIS VIOLATION WILL BE CLOSED.

Violation Description:

Failure to comply with one or more of the following overfill prevention equipment requirements:
Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or
Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or
Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or
Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.

Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018.

For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter.

For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter.

Returned to compliance on 05/06/2022. This is an uncorrected violation that has been elevated to Class II. DUSTO inspection reports document Low Liquid Alarms from sensor L16 in the Vent Sump interstitial space on the following dates: 7/17/2020, 7/13/2020, 7/12/2020, 6/17/2020, 6/16/2020, 6/9/2020, and 4/7/2020. Work orders from Service Station Systems document that glycol monitoring fluid has been added, but that is merely hiding the real issue. As noted in the violation issued on 4/4/2019, the repeated alarms indicate that there is a problem with the Vent Sump which is causing loss of interstitial monitoring fluid. Since fluid is not visible inside the sump, the leak must be into the backfill. Have a qualified contractor remove the backfill from around the sump, remove the interstitial monitoring fluid, and perform a pressure test on the sump interstitial space to determine the source of the leak. Then apply for a UST Minor Repair Permit from HMCD and complete the repair as soon as possible after receiving [Truncated]

Returned to compliance on 07/23/2024. The facility indicated that high & low alarms are present for both the 2 generators and the CE-AST, however failed to indicate the level that the high & low alarms are set at. The facility also failed to indicate the level at which the flow restrictor drop tube actuates. The plan also does not describe if the CE-AST, which feeds the generator tanks, is triggered to stop flow in the event of a high-level alarm in the generator tanks. Update the facility's SPCC plan to include the set-point for the high and low alarms as well as the set-point for the flow restrictor drop tube. Also include a description of the CE-AST & generator system communications between tanks.

Violation Description:

Failure to adequately describe in the SPCC Plan, overfill prevention methods, including a description of the devices or systems in place for each container to prevent overfills.

Permitting activity: A Partial Closure process for WV 27 and WV 28 Effluent waste pipeline was recently completed and is awaiting DTSC Permitting Partial Closure approval. The facility is currently in Permit Maintenance mode.

FACILITY DESCRIPTION/HISTORY

Western Digital Technologies, Inc. (aka WDT) operates the large hazardous waste treatment and storage facility located at 5601 Great Oaks Parkway, San Jose, Santa Clara County, California (the Facility). The Facility occupies approximately 158 acres of land in a commercial/light industrial zoned area at the southern end of the Santa Clara Valley. Between 1955 and 2002, IBM Corporation was the owner and operator of the Facility. In January 2003, IBM Corporation sold the Facility to Hitachi Global Storage, Technologies, Inc. In March 2012, Western Digital Corporation acquired Vivoti Technologies, Ltd. in a stock purchase, and Hitachi Global Storage, Technologies, Inc. was renamed as HGST, Inc. On December 31, 2020, HGST, Inc. merged with Western Digital Technologies, Inc. who is the facility name, owner, and operator.

WDT is permitted to treat and store hazardous waste. WDT designs, develops, and manufactures computer storage devices including hard disk drives, and disk drive components (disk drive heads, disk drive media, and various disk component assemblies). Manufacturing processes include photolithography, vacuum deposition, electroplating, chemical and vacuum etching, and precision machining. Hazardous wastes generated from these processes are either treated at the Facility or transported for recycling or disposal at an appropriate facility. WDT stores hazardous waste at the facility in containers and tanks.

PERMITTING REGULATORY DESCRIPTION/HISTORY

The first hazardous waste facility permit was issued in 1985 and renewed in 1992 while owned and operated by IBM Corporation under EPA identification number CAD990843989. IBM Corporation sold the Facility to HGST who acquired the new EPA identification number CAR000128793. The hazardous waste facility permit was transferred to HGST. A new hazardous waste facility permit was issued on May 16, 2005 that expired on May 15, 2015. The Permittee submitted a timely permit renewal application on November 14, 2014. The permit was renewed for 10 years on May 24, 2022.

The Facility is authorized to operate 21 hazardous waste management units including 13 hazardous waste storage areas, 5 waste vaults, Building 110 A Plant, Building 110D Plant, and a filter press. Wastewater is treated at the on-site industrial wastewater treatment facility prior to discharge to the publicly owned treatment works. Spent solvent waste is shipped off-site for reclamation or disposal.

PERMIT MODIFICATION HISTORY

Fourteen permit modifications were completed since the hazardous waste facility permit was issued on May 16, 2005. In March 2013, four Class 1* and three Class 1 permit modifications were completed that included revisions to the Closure Plan; administrative changes to the Part B application; ownership and stock change; partial closure of the two tank systems; and equipment upgrades. In March 2015, a Class 1* permit modification was completed for re-routing a utility trench containing pipelines that transfer process waste. Class 1* permit modifications may be made only with the prior written approval of DTSC. On December 9, 2015, DTSC received a Closure and Installation Certification Report for the re-route of HW lines. In May 2017, a Class 1 permit modification was completed for changing an emergency contact in the Contingency Plan. In July 2017, a Class 1 permit modification request dated May 2016 for changing the facility name was withdrawn by the Permittee because a new name was not determined yet. On July 2, 2019, a Class 1* permit modification request was submitted for partial closure of 16 tanks. On October 1, 2019, a Class 1* permit modification request was submitted for partial closure of 9 tanks. On September 3, 2020, a Class 1* permit modification was approved for an extension of the closure period for closure of 25 tanks. On November 19, 2020, a Class 1* permit modification request was approved for closure of two bottlewashers. On December 31, 2020, HGST, Inc. merged with Western Digital Technologies, Inc. On January 6, 2021, a Class 1 permit modification request was approved for the ownership change. On April 19, 2021, a Class 1 permit modification request was approved for administrative changes to the permit application. On July 15, 2021, closure of 25 tanks, Waste Vaults 03, 12, 19, 26, 67 and Central Tank Farm B were acknowledged. On February 21, 2024, a Class 1 permit modification was approved for updating the emergency contact in the Contingency Plan. On November 10, 2023, a Class 1* permit modification was submitted for closing the pipelines from Waste Vaults 27 and 28 to the wastewater treatment plant. The workplan was approved on February 21, 2024. The Permittee submitted the Closure Report on July 1, 2024 which is currently undergoing DTSC's review.

Site History:

Hitachi GST operated an electronics (hard disk drive) development and manufacturing facility at 5600 Cottle Road, San Jose, in a mixed industrial, commercial and residential area near the intersections of Monterey Highway, Blossom Hill Road, and United States (US) Route 101 (figure 1.1) from January 2003 until March 2012. The facility was formerly owned by International Business Machines (IBM) Corporation. Prior to 1955, the site was agricultural land, primarily tree orchards, with associated residences. In 1955, IBM purchased the site, which was expanded to 510 acres. Between 1990 and 2000, IBM sold off 159 acres. Hitachi GST was formed in approximately January 2003 as a merger of IBM and Hitachi hard disk drive businesses. At that time, IBM sold 332 acres to Hitachi GST and retained 19 acres. In 2005 Hitachi GST transferred 11 acres to the City of San Jose. In November 2007, 143 acres, the "Redevelopment Property," was removed from the Hitachi GST hazardous waste facility permit. In March 2012, Hitachi GST was purchased by Western Digital, and the approximately 178 acre facility is currently operated as HGST, Inc. HGST proposed a Revitalization Project that included demolition of several on-site buildings as well as some associated infrastructure, realignment and upgrade of transportation routes, and construction of new commercial/industrial buildings. Revitalization Area consists of 14.61 acres and HGST plans to remove this area from the permitted facility boundary. Based on the results of the investigations, DTSC concluded that no further investigation/remediation is required for the Revitalization Area.

Comments:		Extensive soil, soil gas and groundwater investigations were conducted a portion of the site that is planned to be rezoned, sold, and redeveloped into a mixed residential, commercial, and recreational open space area. The area to be redeveloped is divided into five Parcels (Parcel O-1 through O-5), which is referred to as the Redevelopment Property. The purpose of the Final Remedy Completion Report was to characterize the current condition of the Redevelopment Property in order to ensure that the property is appropriately characterized and remediated prior to removal from the RCRA Permit. In regards to Site-wide groundwater on the Redevelopment Property, IBM, the previous owner/operator, will continue remediation under the oversight of the Regional Water Quality Control Board, San Francisco Bay Region. Remediation of chloroform in the Building 028J Area on Parcel O-4 is remediated under the Chloroform Release Area. All remaining areas on the Redevelopment Property have been determined to meet residential standards.

FACILITY DESCRIPTION/HISTORY

Western Digital Technologies, Inc. (aka WDT) operates the large hazardous waste treatment and storage facility located at 5601 Great Oaks Parkway, San Jose, Santa Clara County, California (the Facility). The Facility occupies approximately 158 acres of land in a commercial/light industrial zoned area at the southern end of the Santa Clara Valley. Between 1955 and 2002, IBM Corporation was the owner and operator of the Facility. In January 2003, IBM Corporation sold the Facility to Hitachi Global Storage, Technologies, Inc. In March 2012, Western Digital Corporation acquired Viti Technologies, Ltd. in a stock purchase, and Hitachi Global Storage, Technologies, Inc. was renamed as HGST, Inc. On December 31, 2020, HGST, Inc. merged with Western Digital Technologies, Inc. who is the facility name, owner, and operator.

WDT is permitted to treat and store hazardous waste. WDT designs, develops, and manufactures computer storage devices including hard disk drives, and disk drive components (disk drive heads, disk drive media, and various disk component assemblies). Manufacturing processes include photolithography, vacuum deposition, electroplating, chemical and vacuum etching, and precision machining. Hazardous wastes generated from these processes are either treated at the Facility or transported for recycling or disposal at an appropriate facility. WDT stores hazardous waste at the facility in containers and tanks.

PERMITTING REGULATORY DESCRIPTION/HISTORY

The first hazardous waste facility permit was issued in 1985 and renewed in 1992 while owned and operated by IBM Corporation under EPA identification number CAD990843989. IBM Corporation sold the Facility to HGST who acquired the new EPA identification number CAR000128793. The hazardous waste facility permit was transferred to HGST. A new hazardous waste facility permit was issued on May 16, 2005 that expired on May 15, 2015. The Permittee submitted a timely permit renewal application on November 14, 2014. The permit was renewed for 10 years on May 24, 2022.

The Facility is authorized to operate 21 hazardous waste management units including 13 hazardous waste storage areas, 5 waste vaults, Building 110 A Plant, Building 110D Plant, and a filter press. Wastewater is treated at the on-site industrial wastewater treatment facility prior to discharge to the publicly owned treatment works. Spent solvent waste is shipped off-site for reclamation or disposal.

PERMIT MODIFICATION HISTORY

Fourteen permit modifications were completed since the hazardous waste facility permit was issued on May 16, 2005. In March 2013, four Class 1* and three Class 1 permit modifications were completed that included revisions to the Closure Plan; administrative changes to the Part B application; ownership and stock change; partial closure of the two tank systems; and equipment upgrades. In March 2015, a Class 1* permit modification was completed for re-routing a utility trench containing pipelines that transfer process waste. Class 1* permit modifications may be made only with the prior written approval of DTSC. On December 9, 2015, DTSC received a Closure and Installation Certification Report for the re-route of HW lines. In May 2017, a Class 1 permit modification was completed for changing an emergency contact in the Contingency Plan. In July 2017, a Class 1 permit modification request dated May 2016 for changing the facility name was withdrawn by the Permittee because a new name was not determined yet. On July 2, 2019, a Class 1* permit modification request was submitted for partial closure of 16 tanks. On October 1, 2019, a Class 1* permit modification request was submitted for partial closure of 9 tanks. On September 3, 2020, a Class 1* permit modification was approved for an extension of the closure period for closure of 25 tanks. On November 19, 2020, a Class 1* permit modification request was approved for closure of two bottlewashers. On December 31, 2020, HGST, Inc. merged with Western Digital Technologies, Inc. On January 6, 2021, a Class 1 permit modification request was approved for the ownership change. On April 19, 2021, a Class 1 permit modification request was approved for administrative changes to the permit application. On July 15, 2021, closure of 25 tanks, Waste Vaults 03, 12, 19, 26, 67 and Central Tank Farm B were acknowledged. On February 21, 2024, a Class 1 permit modification was approved for updating the emergency contact in the Contingency Plan. On November 10, 2023, a Class 1* permit modification was submitted for closing the pipelines from Waste Vaults 27 and 28 to the wastewater treatment plant. The workplan was approved on February 21, 2024. The Permittee submitted the Closure Report on July 1, 2024 which is currently undergoing DTSC's review.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

National Priority List:

NPL

The U.S. Environmental Protection Agency (EPA)'s National Priorities List (NPL) includes the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program, based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. This data includes NPL sites represented as polygons, where available, that can be sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS). These site boundaries represent the footprint of a whole site, the sum of all the Operable Units (OUs) and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. As site investigation and remediation progress, OUs may be added, modified or refined. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Mar 8, 2025

National Priority List - Proposed:

PROPOSED NPL

Sites proposed by the U.S. Environmental Protection Agency (EPA), the state agency, or concerned citizens for addition to the National Priorities List (NPL) due to contamination by hazardous waste and identified by the EPA as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites represented as polygons, where available, can be sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS). These site boundaries represent the footprint of a whole site, the sum of all the Operable Units (OUs) and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Mar 8, 2025

Deleted NPL:

DELETED NPL

Sites deleted from the U.S. Environmental Protection Agency (EPA)'s National Priorities List (NPL). The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate. Sites represented as polygons, where available, can be sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS). These site boundaries represent the footprint of a whole site, the sum of all the Operable Units (OUs) and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Comprehensive Environmental Response, Compensation and Liability Information System -[CERCLIS](#)**CERCLIS:**

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. EPA Report on the Status of Open Dumps on Indian Lands:[IODI](#)

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned:[CERCLIS NFRAP](#)

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA). This database was provided by the United States Environmental Protection Agency (EPA). ICs are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site. The IC listing includes remedy component data from Superfund decision documents for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. Additional Environmental Record Sources**Federal****PFAS Greenhouse Gas Emissions Data:**[PFAS GHG](#)

The U.S. Environmental Protection Agency's Greenhouse Gas Reporting Program (GHGRP) collects Greenhouse Gas (GHG) data from large emitting facilities (25,000 metric tons of carbon dioxide equivalent (CO₂e) per year), and suppliers of fossil fuels and industrial gases that results in GHG emissions when used. Includes GHG emissions data for facilities that emit or have emitted since 2010 chemicals identified in EPA's CompTox Chemicals Dashboard list of PFAS without explicit structures and list of PFAS structures in DSSTox. PFAS emissions data has been identified for facilities engaged in the following industrial processes: Aluminum Production (GHGRP Subpart F), HCFC-22 Production and HFC-23 Destruction (Subpart O), Electronics Manufacturing (Subpart I), Fluorinated Gas Production (Subpart L), Magnesium Production (Subpart T), Electrical Transmission and Distribution Equipment Use (Subpart DD), and Manufacture of Electric Transmission and Distribution Equipment (Subpart SS). Over time, other industrial processes with required GHGRP reporting may include PFAS emissions data and the list of reportable gases may change over time. Note that some regulatory programs have specified chemical structure requirements that define PFAS differently than the lists in EPA's CompTox Chemicals Dashboard.

OSCs coordinate all federal efforts with, and provide support and information to local, state, and regional response communities. An OSC is an agent of either EPA or the U.S. Coast Guard (USCG), depending on where the incident occurs. EPA's OSCs have primary responsibility for spills and releases to inland areas and waters. USCG OSCs have responsibility for coastal waters and the Great Lakes. In general, an OSC has the following key responsibilities during and after a response: Assessment, Monitoring, Response Assistance, and Evaluation.

The U.S. Environmental Protection Agency's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of toxic chemicals from U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. There are currently 770 individually listed chemicals and 33 chemical categories covered by the TRI Program. Facilities that manufacture, process or otherwise use these chemicals in amounts above established levels must submit annual reporting forms for each chemical. Note that the TRI chemical list does not include all toxic chemicals used in the U.S. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment. This database includes TRI Reporting Data for calendar years 1987 through 2021 and Preliminary Data for 2022.

PFOA/PFOS Contaminated Sites:

[PFAS NPL](#)

This list of Superfund Sites with Per- and Polyfluoroalkyl Substances (PFAS) detections is made available by the U.S. Environmental Protection Agency (EPA) in their PFAS Analytic Tools data, previously the list was obtained by EPA FOIA requests. EPA's Office of Land and Emergency Management and EPA Regional Offices maintain what is known about site investigations, contamination, and remedial actions under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) where PFAS is present in the environment. Limitations: Detections of PFAS at National Priorities List (NPL) sites do not mean that people are at risk from PFAS, are exposed to PFAS, or that the site is the source of the PFAS. The information in the Superfund NPL and Superfund Alternative Agreement (SAA) PFAS detection site list is years old and may not be accurate today. Site information such as site name, site ID, and location has been confirmed for accuracy; however, PFAS-related information such as media sampled, drinking water being above the health advisory, or mitigation efforts has not been verified. For Federal Facilities data, the other Federal agencies (OFA) are the lead agency for their data and provided them to EPA.

Government Publication Date: Jun 30, 2025

Federal Agency Locations with Known or Suspected PFAS Detections:

[PFAS FED SITES](#)

This list of federal agency locations with known or suspected detections of Per- and Polyfluoroalkyl Substances (PFAS) is made available by the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools data. The EPA outlines that these data are gathered from several federal entities, such as the federal Superfund program, Department of Defense (DOD), National Aeronautics and Space Administration (NASA), Department of Transportation (DOT), and Department of Energy (DOE). The dates this data was extracted for the PFAS Analytic Tools range from 2022 to 2024. Sites on this list do not necessarily reflect the source/s of PFAS contamination and detections do not indicate level of risk or human exposure at the site. Agricultural notifications in this data are limited to DOD sites only. At this time, the EPA is aware that this list is not comprehensive of all Federal agencies.

SSEHRI PFAS Contamination Sites:

[PFAS SSEHRI](#)

This PFAS Contamination Site Tracker database is compiled by the PFAS Project Lab, part of the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents. Locations for the Known PFAS Contamination Sites are sourced from the PFAS Sites and Community Resources Map by the PFAS-REACH team, credited to PFAS Project Lab, Silent Spring Institute, and PFAS Exchange. Disclaimer: The source conveys the data undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Access the following source link for the most current information: <https://pfasproject.com/pfas-sites-and-community-resources/>

National Response Center PFAS Spills:

[PFAS ERNS](#)

This Per- and Poly-Fluoroalkyl Substances (PFAS) Spills dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The National Response Center (NRC), operated by the U.S. Coast Guard, is the designated federal point of contact for reporting all oil, chemical, and other discharges into the environment, for the United States and its territories. This dataset contains NRC spill information from 1990 to the present that is restricted to records associated with PFAS and PFAS-containing materials. Incidents are filtered to include only records with a "Material Involved" or "Incident Description" related to Aqueous Film Forming Foam (AFFF). The keywords used to filter the data included "AFFF," "Fire Fighting Foam," "Aqueous Film Forming Foam," "Fire Suppressant Foam," "PFAS," "PERFL," "PFOA," "PFOS," and "Genx." Limitations: The data from the NRC website contains initial incident data that has not been validated or investigated by a federal/state response agency. Keyword searches may misidentify some incident reports that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS spills/release incidents.

PFAS NPDES Discharge Monitoring:

[PFAS NPDES](#)

This list of National Pollutant Discharge Elimination System (NPDES) permitted facilities with required monitoring for Per- and Polyfluoroalkyl (PFAS) Substances is made available via the U.S. Environmental Protection Agency (EPA)'s PFAS Analytic Tools. Any point-source wastewater discharger to waters of the United States must have a NPDES permit, which defines a set of parameters for pollutants and monitoring to ensure that the discharge does not degrade water quality or impair human health. This list includes NPDES permitted facilities associated with permits that monitor for Per- and Polyfluoroalkyl Substances (PFAS), limited to the years 2007 - present. EPA further advises the following regarding these data: currently, fewer than half of states have required PFAS monitoring for at least one of their permittees, and fewer states have established PFAS effluent limits for permittees. For states that may have required monitoring, some reporting and data transfer issues may exist on a state-by-state basis.

Encompasses Toxics Release Inventory records included in the EPA PFAS Analytic Tools. The EPA's TRI database currently tracks information on disposal or releases of 770 individually listed toxic chemicals and 33 chemical categories from thousands of U.S. facilities and details about how facilities manage those chemicals through recycling, energy recovery, and treatment. This listing includes TRI Reporting Data for calendar years 1987 through 2021 and Preliminary Data for 2022.

PFAS Water Quality Portal Sampling Data:

[PFAS WATER](#)

This Per- and Poly-Fluoroalkyl Substances (PFAS) Environmental Media Sampling Data is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The Water Quality Portal (WQP), as a cooperative service sponsored by the United States Geological Survey, the EPA, and the National Water Quality Monitoring Council, is part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations, and individuals submit project details and sampling results to this public repository. Limitations: EPA did not carry out the sampling or testing of a majority of the data in the WQP PFAS dataset. EPA can only speak to the accuracy and completeness of the data from projects like the National Aquatic Resource Surveys for which EPA is the data owner/organization. Data may exist within the file on Quality Assurance Project Plans (QAPPs) and the approving agency of the QAPP, if a QAPP is entered.

PFAS TSCA Manufacture and Import Facilities:

[PFAS TSCA](#)

The U.S. Environmental Protection Agency (EPA) issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) and requires chemical manufacturers and facilities that manufacture or import chemical substances to report data to EPA. This list is specific only to TSCA Manufacture and Import Facilities with reported per- and poly-fluoroalkyl (PFAS) substances. Data file is sourced from EPA's PFAS Analytic Tools TSCA dataset which includes CDR/Inventory Update Reporting data from 1998 up to 2020. Disclaimer: This data file includes production and importation data for chemicals identified in EPA's CompTox Chemicals Dashboard list of PFAS without explicit structures and list of PFAS structures in DSSTox. Note that some regulations have specific chemical structure requirements that define PFAS differently than the lists in EPA's CompTox Chemicals Dashboard. Reporting information on manufactured or imported chemical substance amounts should not be compared between facilities, as some companies claim Chemical Data Reporting Rule data fields for PFAS information as Confidential Business Information.

PFAS Waste Transfers from RCRA e-Manifest:

[PFAS E-MANIFEST](#)

This Per- and Poly-Fluoroalkyl Substances (PFAS) Waste Transfers dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. Every shipment of hazardous waste in the U.S. must be accompanied by a shipment manifest, which is a critical component of the cradle-to-grave tracking of wastes mandated by the Resource Conservation and Recovery Act (RCRA). According to the EPA, currently no Federal Waste Code exists for any PFAS compounds. To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: • PFAS • PFOA • PFOS • PERFL • AFFF • GENX • GEN-X (plus the Vermont state-specific waste codes). Limitations: Amount or concentration of PFAS being transferred cannot be determined from the manifest information. Keyword searches may misidentify some manifest records that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS waste transfers.

PFAS Industry Sectors:

PFAS IND

This Per- and Poly-Fluoroalkyl Substances (PFAS) Industry Sectors dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The EPA developed the dataset from various sources that show which industries may be handling PFAS including: EPA's Enforcement and Compliance History Online (ECHO) records restricted to potential PFAS-handling industry sectors; ECHO records for Fire Training Sites identified where fire-fighting foam may have been used in training exercises; and 14 CFR Part 139 Airports compiled from historic and current records from the FAA Airport Data and Information Portal. Since July 2006, all certificated Part 139 Airports are required to have fire-fighting foam onsite that meet certain military specifications, which to date have been fluorinated (Aqueous Film Forming Foam). Limitations: Inclusion in this dataset does not indicate that PFAS are being manufactured, processed, used, or released by the facility. Listed facilities potentially handle PFAS based on their industrial profile, but are unconfirmed by the EPA. Keyword searches in ECHO for Fire Training sites may misidentify some facilities and should not be considered to be an exhaustive list of fire training facilities in the U.S.

Toxic Substances Control Act:

TSCA

The U.S. Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule. The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI). EPA CDR collections occur approximately every four years and reporting requirements change per collection.

Hist TSCA:

HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Integrated Compliance Information System (ICIS):

ICIS

The Integrated Compliance Information System (ICIS) database contains integrated enforcement and compliance information across most of U.S. Environmental Protection Agency's (EPA) programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained by the EPA Headquarters and at the Regional offices. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

Former Military Nike Missile Sites:

FORMER NIKE

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

MSHA applicable data includes the following: all Coal and Metal/Non-Metal mines under MSHA's jurisdiction since 1/1/1970; mine addresses for all mines in the database except for Abandoned mines prior to 1998 from MSHA's legacy system (addresses may or may not correspond with the physical location of the mine itself); violations that have been assessed penalties as a result of MSHA inspections beginning on 1/1/2000; and violations issued as a result of MSHA inspections conducted beginning on 1/1/2000.

Surface Mining Control and Reclamation Act Sites:

SMCRA

This inventory of land and water impacted by past mining (primarily legacy coal mining operations) is maintained by the U.S. Department of the Interior's Office of Surface Mining Reclamation and Enforcement (OSMRE), as it provides information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). This inventory contains information on the type and extent of Abandoned Mine Land (AML) Problems, as well as information on the cost associated with the reclamation of those problems. The data is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed. Disclaimer: Per the OSMRE, States and tribes who enter their data into e-AMLIS (AML Inventory System) may truncate their latitude and longitude so the precise location of usually dangerous AMLs is not revealed in an effort to protect the public from searching for these AMLs, most of which are on private property. If more precise location information is needed, please contact the applicable state/tribe of interest.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

FEMA Flood Zone Definitions

Special Flood Hazard Areas – High Risk

Special Flood Hazard Areas represent the area subject to inundation by 1-percent-annual chance flood. Structures located within the SFHA have a 26-percent chance of flooding during the life of a standard 30-year mortgage. Federal floodplain management regulations and mandatory flood insurance purchase requirements apply in these zones.

ZONE	DESCRIPTION
A	Areas subject to inundation by the 1-percent-annual-chance flood event. Because detailed hydraulic analyses have not been performed, no Base Flood Elevations (BFEs) or flood depths are shown.
AE, A1-A30	Areas subject to inundation by the 1-percent-annual-chance flood event determined by detailed methods. BFEs are shown within these zones. (Zone AE is used on new and revised maps in place of Zones A1–A30.)
AH	Areas subject to inundation by 1-percent-annual-chance shallow flooding (usually areas of ponding) where average depths are 1–3 feet. BFEs derived from detailed hydraulic analyses are shown in this zone.
AO	Areas subject to inundation by 1-percent-annual-chance shallow flooding (usually sheet flow on sloping terrain) where average depths are 1–3 feet. Average flood depths derived from detailed hydraulic analyses are shown within this zone.
AR	Areas that result from the decertification of a previously accredited flood protection system that is determined to be in the process of being restored to provide base flood protection.
A99	Areas subject to inundation by the 1-percent-annual-chance flood event, but which will ultimately be protected upon completion of an under-construction Federal flood protection system. These are areas of special flood hazard where enough progress has been made on the construction of a protection system, such as dikes, dams, and levees, to consider it complete for insurance rating purposes. Zone A99 may be used only when the flood protection system has reached specified statutory progress toward completion. No BFEs or flood depths are shown.

Coastal High Hazard Areas – High Risk

Coastal High Hazard Areas (CHHA) represent the area subject to inundation by 1-percent-annual chance flood, extending from offshore to the inland limit of a primary front al dune along an open coast and any other area subject to high velocity wave action from storms or seismic sources. Structures located within the CHHA have a 26-percent chance of flooding during the life of a standard 30-year mortgage. Federal floodplain management regulations and mandatory purchase requirements apply in these zones.

ZONE	DESCRIPTION
V	Areas along coasts subject to inundation by the 1-percent-annual-chance flood event with additional hazards associated with storm-induced waves. Because detailed coastal analyses have not been performed, no BFEs or flood depths are shown.
VE, V1-V30	Areas along coasts subject to inundation by the 1-percent-annual-chance flood event with additional hazards due to storm-induced velocity wave action. BFEs derived from detailed hydraulic coastal analyses are shown within these zones. (Zone VE is used on new and revised maps in place of Zones V1–V30.)

Hydrologic Information

Moderate and Minimal Risk Areas

Areas of moderate or minimal hazard are studied based upon the principal source of flood in the area. However, buildings in these zones could be flooded by severe, concentrated rainfall coupled with inadequate local drainage systems. Local stormwater drainage systems are not normally considered in a community's flood insurance study. The failure of a local drainage system can create areas of high flood risk within these zones. Flood insurance is available in participating communities, but is not required by regulation in these zones. Nearly 25-percent of all flood claims filed are for structures located within these zones.

ZONE	DESCRIPTION
B, X (shaded)	Moderate risk areas within the 0.2-percent-annual-chance floodplain, areas of 1-percent-annual-chance flooding where average depths are less than 1 foot, areas of 1-percent-annual-chance flooding where the contributing drainage area is less than 1 square mile, and areas protected from the 1-percent-annual-chance flood by a levee. No BFEs or base flood depths are shown within these zones. (Zone X (shaded) is used on new and revised maps in place of Zone B.)
C, X (unshaded)	Minimal risk areas outside the 1-percent and .2-percent-annual-chance floodplains. No BFEs or base flood depths are shown within these zones. (Zone X (unshaded) is used on new and revised maps in place of Zone C.)

Undetermined Risk Areas

ZONE	DESCRIPTION
D	Unstudied areas where flood hazards are undetermined, but flooding is possible. No mandatory flood insurance purchase requirements apply, but coverage is available in participating communities.

Federal Sources

FEMA National Flood Hazard Layer

FEMA FLOOD

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

Indoor Radon Data

INDOOR RADON

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

Public Water Systems Violations and Enforcement Data

PWSV

This list of drinking water violations and enforcement actions is sourced from the U.S Environmental Protection Agency's (EPA) Enforcement and Compliance History Online (ECHO) system that incorporates Public Water Systems data from EPA's Safe Drinking Water Information System (SDWIS) database, as part of the national download of Safe Drinking Water Act (SDWA) data. SDWIS contains information on public water systems from the Public Water System Supervision (PWSS) Program, including monitoring, enforcement, and violation data related to requirements established by the SWDA. Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Radon Zone Level

RADON ZONE

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

Safe Drinking Water Information System (SDWIS)

SDWIS

This national download of Safe Drinking Water Act (SDWA) data is sourced from the U.S Environmental Protection Agency's (EPA) Enforcement and Compliance History Online (ECHO) system that incorporates Public Water Systems data from EPA's Safe Drinking Water Information System (SDWIS) database. SDWIS contains information on public water systems from the Public Water System Supervision (PWSS) Program related to requirements established by the Safe Drinking Water Act (SDWA). Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Soil Survey Geographic database

SSURGO

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

U.S. Fish & Wildlife Service Wetland Data

US WETLAND

The U.S. Fish & Wildlife Service Wetland layer represents the approximate location and type of wetlands and deepwater habitats in the United States.

USGS Current Topo

US TOPO

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

USGS Geology

US GEOLOGY

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

USGS National Water Information System

FED USGS

The U.S. Geological Survey's (USGS) National Water Information System (NWIS) is the nation's principal repository of water resources data. The data includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data. This NWIS database information is obtained through the Water Quality Data Portal (WQP). The WQP

Appendix

is a cooperative service sponsored by the USGS, the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC).

State Sources

Oil and Gas Wells

OGW

The California Department of Conservation, Geologic Energy Management Division (CalGEM) provides this oil and gas wells dataset. CalGEM makes no warranties, whether expressed or implied, and the data is for informational purposes.

Periodic Groundwater Level Measurement Locations

MONITOR WELLS

Locations of groundwater level monitoring wells in the Department of Water Resources (DWR)'s Periodic Groundwater Levels dataset. The DWR Periodic Groundwater Levels dataset contains seasonal and long-term groundwater level measurements collected by the Department of Water Resources and cooperating agencies.

Well Completion Reports

WATER WELLS

List of wells from the Well Completion Reports data made available by the California Department of Water Resources' (DWR) Online System for Well Completion Reports (OSWCR). Please note that the majority of well completion reports have been spatially registered to the center of the 1x1 mile Public Land Survey System section that the well is located in.

Ford Leasing Development Company / Sunset Ford, Westminster, California. Conducted a Phase I and II ESA and remedial activities at a closing automobile dealership with 41 service bays containing active, decommissioned, or removed in-ground hydraulic vehicle lifts. The Phase II ESA identified petroleum hydrocarbon and VOC impacts in soil and groundwater in the immediate vicinity of the lifts. Based on the identified impacts, managed the removal of all lifts and contaminated soil under regulatory oversight and conducted a comprehensive site investigation, including well installation and soil, groundwater, and soil vapor sampling. Prepared and submitted final reports to the client and regulatory agencies and obtained regulatory site closure.

UBS Realty Investors, LLC, Vernon, California. Conducted a Phase I and Phase II ESA, hazardous materials building survey, and oversight of remedial actions on an approximately 6-acre industrial property in preparation of acquisition and redevelopment. The property was more recently used for large quantity storage and distribution of motor oil and lubricants. The facility was previously involved with blending and bottling motor oil products including a historical cooperage with drum and container cleaning as part of those operations. The business had occupied the subject property since 1936 with consistent operations throughout its history and only minor modifications to the original design, with tanks farms, rail operations, and USTs. The Phase I ESA included site reconnaissance, property inspection, site history review, database search, and final report preparation with recommendations for additional assessment. The Phase II subsurface investigation scope included a geophysical survey, the advancement of 43 soil borings, 24 soil vapor borings identifying petroleum hydrocarbon and VOC impacts across the site. Based on the identified impacts, provided oversight of the cleanup with the property obtaining regulatory site closure and being redeveloped.

Confidential Private Equity Firm, Twenty-nine Sites in Nine States. Provided project oversight and supervision of Property Condition Assessments (PCAs), Mechanical, Electrical, Plumbing & Fires Life Safety (MEPFLS) assessments, Energy Surveys, and equipment inventory at active/operating cold storage facilities.

USDA Forest Service, Mountain Center, California. Prepared a Soil Excavation and Groundwater Well Installation Workplan to assess a release that was discovered during the removal of two 1,000-gallon USTs. Elevated contaminant concentrations were detected in confirmation soil samples collected at that time. Installed one groundwater monitoring well into fractured bedrock and later abandoned the well due to planned excavation activities in the area. A groundwater sample collected prior to well abandonment contained elevated contaminant concentrations. Prepared a Site Investigation Summary Report summarizing site activities and investigations to date. Prepared a Groundwater Assessment Workplan to assess the extent of contaminant concentrations in groundwater. Site assessment work is pending.

American Golf Corporation, Eighteen Sites in Southern California. Managed underground storage tank removal and closure activities. Work included performing initial confirmation soil sampling and analysis and subsequent monitoring and soil and/or groundwater testing in association with the removal of the underground storage tanks, associated dispensers, and piping at sixteen sites located throughout Southern California. Prepared soil and/or groundwater investigation workplans as needed to address contamination issues at several of the sites and closure reports for the various State and local authorities. To date, regulatory closure has been obtained at most of the facilities. Currently managing ongoing monitoring and/or remediation is occurring at several of the facilities.

G.E. Capital, Tijuana, Mexico. Managed and conducted more than 30 Phase I and Phase II ESAs for active and proposed industrial developments within various areas of Tijuana, Mexico. Work included site reconnaissance, site history review, and final report preparation.
