IBEW Member against the approval of the Inyokern Data Center

I am a IBEW (International Brotherhood of Electrical Workers) member a do not support of this project being approved. The short term benefits of the work that this project would bring do not outweigh the massive long term issues that it will cause ie. the added cost to upgrade the power grid to support this project, that the owner wonâ€™t end up paying, we will bear the cost of it with higher energy bills; the noise and vibration caused by the cooling systems will be heard for miles (I would be surprised if youâ€™d be able to hear the noise even in China Lake Navel Base. The backup generator system will be even louder than the cooling system and will put even more greenhouse gases into the atmosphere that weâ€™ve (all of California) have been trying to get away from doing for years. With all the negative impacts that these data centers have caused around the country that Iâ€™ve listed here and others I havenâ€™t mentioned, I do not want them to affect where I live.
