Docket Number: 24-SB-605*

CEC Comment

Additional submitted attachment is included below.

Dear Members of the California Energy Commission,

Re: SB 605 Response – Wave and Tidal Energy

As the developer and inventor of the patented Counter Rotation Generator (CRG) for wave, wind, and currents, I am writing to submit my comments and recommendations regarding SB 605.

Over the past fifteen years, I have accumulated over 4,200 collective hours of real-time testing experience across various marine environments, including the Gulf Stream, the Agulhas Current, the Mozambique Channel, tidal currents in Florida, and the Columbia River in Washington. I am currently based in Eureka, California, modifying and testing CRG technology as a hybrid wave and wind energy generator off the Mendocino coast.

Based on this experience, I respectfully offer the following recommendations to the Commission:

- Establish an Inclusive Stakeholder Platform: Create a unified platform for all stakeholders to participate in offshore marine energy development.
- Designate a Regional Test Site: Establish a designated test area two to three miles off the coast of Eureka. This would allow developers to conduct testing, enable real-time mechanical and environmental monitoring, and provide daily demonstrations for local communities and investors, utilizing Army Corps of Engineers Nationwide Permit #52.
- Consolidate Classifications: Group offshore wind, wave energy technologies together under the broader category of "Offshore Marine Energies."
- Re-evaluate Tidal Resources: Given the limited availability of viable tidal sources in California, consider removing tidal energy as a primary focus area.

Thank you for your time and consideration.

Paul Greyshock
