Condition of Certification COM-7 (BIO-2; HAZ-1; Noise-8; Soil and Water 2, 7, 8, 9; TLSN-3; VIS-1, 3; Waste-5 – Annual Operating Report

Dear Mr. Ali:

Please find the attached, pursuant to Colusa Generating Station (CGS) Conditions of Certification COM-7. This is the Annual Compliance Report for CGS and represents the operational period of January 1, 2025 through December 31, 2025. Within this report you will find the following information.

1. Attachment A: an updated compliance matrix showing the status of all Conditions of Certification (with exception to fully satisfied conditions as they do not need to be included after they have been reported as completed);

2. Attachment B: a summary of the current project operating status with explanations of any significant changes to facility operations during the reporting year;

3. Attachment C: documents required by specific conditions to be submitted along with the Annual Compliance Report.

4. Attachment D: a cumulative listing of all post-certification changes approved by the California Energy Commission or cleared by the CPM;

5. Attachment E: an explanation for any submittal deadlines that were missed, accompanied by an estimate of when the information will be provided;

6. Attachment F: a listing of filings submitted to, or permits issued by, other governmental agencies during the year;

7. Attachment G: a projection of project compliance activities scheduled during the next year;

8. Attachment H: a listing of the year's additions to the on-site compliance files;

9. Attachment I: an evaluation of the on-site contingency plan for unplanned facility closure, including any suggestions necessary for bringing the plan up to update;

10. Attachment J: a listing of complaints, notices of violations, official warnings, and citations received during the year, a description of the resolution of any resolved matters, and the status of any unresolved matters.

11. Attachment K: verification of funding to the Maxwell Fire Department

Should you have any questions or comments please do not hesitate to contact me.

Sincerely,

TJ Gomez
Sr. Environmental Field Specialist
Colusa Generating Station

Attachment A
Compliance Matrix

COLUSA GENERATING STATION COMPLIANCE MATRIX BASED ON CEC FINAL DECISION

Color code key:	Construction Item	Commissioning Item	Operations Item	Submitted to CEC or Agency	Approved by CEC/No Longer Applicable

Cond. #	Sort Code	Description of Project Owner's Responsibilities	Verification/Action/Submittal Required by Project Owner	Timeframe	Lead Respons. Party	Date sent to CEC, CBO or agency	Log Number	Status	Comments
AQ-01	COMM	All facility operating staff shall be advised of and familiar with these permit conditions.	Provide CPM and APCO with signed records of facility operating staff indicating review of permit conditions and maintain training and records documenting this training at the site.	30 days prior to first fire	PG&E	**On file in Environmental Managers Office**		**Ongoing with New Hires**	
AQ-02	CONS	Right of entry shall be provided at all times.	Project Owner shall make site available to reps of the District, ARB and CEC for inspection, etc.	As required	PG&E			Ongoing	
AQ-03	OPS	In the case of shutdown or restart of air pollution control equipment for necessary scheduled maintenance, notify CPM and APCO of such shutdown 24 hours prior.	Notify the CPM and APCO 24 hours in advance of planned shutdowns for maintenance.	As required	PG&E			Ongoing	
AQ-04	OPS	If any upset or breakdown occurs with permitted equipment that causes excess emissions of air contaminants, the APCO shall be notified with 24 hours or by 9:00am by the following work day.	In addition to phone call, also submit a written statement of full disclosure to the APCO within 72 hours, including date, time, duration, estimated emissions, cause and remedy.	As required	PG&E			Ongoing	
AQ-05	OPS	Fugitive emissions, including dust and odors, shall be controlled at all times such that a nuisance is not created at any point beyond the facility's property lines.	Project Owner shall document any complaints received from the public in the Quarterly Operation Reports (QORs) required by AQ-22 and make site available to APCO, ARB, and CEC representatives.	Quarterly after COD	PG&E			Ongoing	
AQ-07.2	COMM	A source test protocol will be submitted to the APCD for approval.	Submit source test protocol to the APCD for approval by the APCO.	45 days prior to conducting annual source tests	PG&E			Annual Requirement	
AQ-07.3	COMM	Notify the CPM and District 10 days prior to actual source test.	Notify the CPM and APCD prior to any compliance source test.	10 days prior to conducting any compliance source test	PG&E			Annual Requirement	
AQ-08	COMM	**CONDITION MODIFIED BY CEC ORDER 7-15-09:** Stack gas testing shall be required on an annual basis for NOx, VOC, and CO on the HRSG stacks. The HRSG stacks shall also be tested for SOx and PM10 emissions during the first year and in subsequent years if requested by APCO. The natural gas water bath heater shall be tested for NOx, SOx, VOC, CO, and PM10 during the first year and thereafter only as requested by APCO.	The results and field data colleced during source tests shall be submitted to the CPM and the District within 60 days of testing.	Within 60 days of testing	PG&E			Annual Requirement	
AQ-09	COMM	Annual testing of the HRSG stacks shall include quantification of formaldehyde and NH3 emissions for compliance with permit limits.Verify by continuous recording the ammonia injection rate to the system. The ammonia source test shall be conducted over the expected operating rate of the turbine as set forth in the Condition.	Provide results and field data collected during source tests to CPM and APCD. Submit proposed ammonia injection/emission rate correlation to the APCD and CPM for approval with the ammonia source test report.	Within 60 days of testing	PG&E			Annual Requirement	

Cond. #	Sort Code	Description of Project Owner's Responsibilities	Verification/Action/Submittal Required by Project Owner	Timeframe	Lead Respons. Party	Date sent to CEC, CBO or agency	Log Number	Status	Comments
AQ-10	OPS	**CONDITION MODIFIED BY CEC ORDER 7-15-09:** The gas turbines, duct burners, and natural gas water heater shall be fired exclusively on pipeline quality natural gas.	Submit information on the quality and type of fuel used for the gas turbines, duct burners, and natural gas water bath heater to the CPM/APCO in the QORs.	Quarterly after COD	PG&E			Ongoing	
AQ-11	OPS	The average annual sulfur content in the natural gas shall be less than or equal to 0.3 grains per 100 SCF. Conduct monthly testing at the site using approved methods to determine sulfur content. Natural gas testing info from Burney will also be reviewed and provided to the APCD.	Compile the required data on the sulfur content of the natural gas and submit to the CPM and APCO in the QORs.	Quarterly after COD	PG&E			Ongoing	
AQ-13a	OPS	All applicable federal standards and test procedures of Subpart KKKK shall be met.	Provide copies of all correspondence with EPA regarding compliance with Subpart KKKK to the APCD and CEC.	Quarterly after COD	PG&E			Ongoing	
AQ-14	OPS	CTGs shall meet a VOC limit of 2.0 ppmvd w/ duct burner firing and 1.38 ppmvd w/o duct firing at 15% O2 averaged over 1 hour. Maximum hourly steady state VOC emission limits for each CTG are 7.2 pounds with duct firing and 3.4 pounds w/o duct firing	Submit to the CPM and APCO CTG source test emissions data demonstrating compliance with this condition as required by condition AQ-8 and provide operating data that establishes ongoing compliance as part of AQ-22.	Within 60 days of testing	PG&E			Ongoing	
AQ-15	OPS	The CTGs shall meet a NOx limit of 2.0 ppmvd @15% O2 averaged over one hour except during commissioning. Maximum hourly steady state NOx emission limits for each CTG are 20.7 pounds with duct firing and 15.3 pounds without duct firing.	Submit to the CPM and APCO CTG continuous emissions data demonstrating compliance with this condition as part of the QORs.	Quarterly after COD	PG&E			Ongoing	
AQ-16	OPS	The CTGs shall meet a CO limit of 3.0 ppmvd @15% O2 over a three-hour rolling average except during commissioning. Maximum hourly steady state CO emission limits for each CTG are 18.9 pounds with duct firing and 14.0 pounds without duct firing.	Submit to the CPM and APCO CTG continuous emissions data demonstrating compliance with this condition as part of the QORs.	Quarterly after COD	PG&E			Ongoing	
AQ-18	OPS	Ammonia slip shall be limited to 5.0 pmvd @15% O2 over one hour. Formaldehyde emissions will be limited to 0.917 lbs per MMscf of natural gas. Maximum hourly steady state NH3 emission limits for each CTG are 19.2 pounds with duct firing and 14.2 pounds without duct firing.	Submit to the CPM and APCO CTG source test emissions data demonstrating compliance with this condition a part of the QOR. Provide to the CPM and APCO for approval a calculation method to determine the ammonia slip emissions, using source test data, based on the NOx concentration and the ammonia injection rate; this calculation shall be revised for approval as necessary after each source test performed under AQ-9.	Within 60 days of testing	PG&E			Annual Requirement	
AQ-19a	OPS	CEMS shall be installed to sample, analyze, and record NOx, CO, and O2 concentration in the exhaust gas of both HRSG stacks.	Make the site available for inspection by the APCD, ARB, and CEC to verify CEMS is properly installed and operational.	As required	PG&E			Ongoing	
AQ-19b	OPS	CEMS will generate reports of emissions data in accordance with permit requirements and will send alarm signals to the plant DCS control room when emissions levels approach or exceed pre-selected limits.	Submit emissions data generated by the CEMS to the CPM and APCO as part of the QORs.	Quarterly after COD	PG&E			Ongoing	
AQ-19c	OPS	RATA tests will be conducted annually to verify performance of the CEMS.	Provide RATA test results along with annual source test report as required under AQ-8.	Annually	PG&E			Ongoing	
AQ-22	OPS	Quarterly reports of CEMS and process data, including startup info, shall be submitted to the District within 30 days after the end of each quarter.	Provide information as part of QORs. (Format will be determined by the District and may include both electronic spreadsheet and hard copy files.)	Quarterly after COD	PG&E			Ongoing	

Cond. #	Sort Code	Description of Project Owner's Responsibilities	Verification/Action/Submittal Required by Project Owner	Timeframe	Lead Respons. Party	Date sent to CEC, CBO or agency	Log Number	Status	Comments
AQ-25	OPS	**CONDITION MODIFIED BY CEC ORDER 7-15-09:** The total emissions from the CTGs and HRSGs shall not exceed those established in the Condition for hourly and daily operations (see emission limits set forth in table in condition).	Submit CTG and HRSG emissions data to CEC CPM and APCO demonstrating compliance with the condition as part of QORs.	Quarterly after COD	PG&E			Ongoing	
AQ-26	OPS	**CONDITION MODIFIED BY CEC ORDER 7-15-09:** The total emissions from the Colusa Power Plant shall not exceed the quarterly and annual combustion emission limits established in the Condition [all numbers have been revised from original Final Decision]	Submit to the CPM and APCO the plant emissions data demonstrating compliance with this condition.	Quarterly after COD	PG&E			Ongoing	
AQ-29	OPS	Total facility emissions of Hazardous Air Pollutants shall not exceed 10 tons/year for any single pollutant except ammonia, formaldehyde, and propylene.		Annually	PG&E			Ongoing	
AQ-SC6	OPS	Submit to the CPM for review and approval any modification proposed by the project owner to any project air permit. Project Owner shall submit to the CPM any modification to any permit proposed by the District of EPA and any revised permit issued by the District of EPA.	Submit any proposed air permit modification to the CPM.	Within 5 working days of its submittal	PG&E			Ongoing	
AQ-SC9	OPS	Submit to the CPM Quarterly Operation Reports following the end of each calendar quarter and containing the info required by Condition AQ-19.	Submit QORs to the CPM and APCO no later than 30 days following the end of each calendar quarter.	Quarterly after COD	PG&E			Ongoing	
AQ-SC11	OPS	**NEW CONDITION PER CEC ORDER 7-15-09:** The wet surface air cooler spray water shall be tested for total dissolved solids and that data shall be used to determine and report the particulate matter emissions from the wet surface air cooler. The wet surface air cooler spray water shall be tested at least once annually during the anticipated summer operation peak period (July through September).	The project owner shall provide the water quality test results and the wet surface air cooler particulate (PMI *0/PM2.5)* emissions estimates to the CPM as part of the fourth quarter's quarterly operational report (AQ-SC9).	At least once annually during summer peak period				Ongoing	
BIO-07	OPS	Incorporate biological mitigation measures into the BRMIMP and permanent or unexpected permanent closure plans.	Address all biological resource related issues associated with facility closure and provide final measures in a biological resources element of the final closure plan.	12 months prior to start of closure activities	PG&E			Ongoing	
COM-01	OPS	Unrestricted Access		Ongoing	PG&E			Ongoing access provided during construction	
COM-02	OPS	Compliance Record--The files are to contain copies of all "as-built" drawings, all documents submitted as verification for conditions, and all other project-related documents.		Ongoing	PG&E			Ongoing	
COM-05	OPS	Compliance Matrix	Submit a compliance matrix with each MCR and also in ACR	Include in MCR and in ACR	PG&E			Ongoing	
COM-07	OPS	Annual Compliance Report	Submit to CPM on an annual basis	Annually	PG&E			Ongoing	
COM-09	OPS	Annual Energy Facility Compliance Fee	Submit annual compliance fee to CEC	During life of project	PG&E			Ongoing	

Cond. #	Sort Code	Description of Project Owner's Responsibilities	Verification/Action/Submittal Required by Project Owner	Timeframe	Lead Respons. Party	Date sent to CEC, CBO or agency	Log Number	Status	Comments
COM-10	OPS	Reporting of Complaints, Notices and Citations	Report to the CPM all notices, complaints, and citations within 10 days of receipt.	As required	PG&E			Ongoing	
COM-11	OPS	Planned Facility Closure	Submit a closure plan to the CPM at least 12 months prior to commencement of a planned closure	12 months prior to start of closure activities	PG&E				
COM-13	OPS	Unplanned Permanent Facility Closure	The on-site contingency plan required for unplanned temporary closure shall also cover unplanned permanent facility closure. All of the requirements specified for unplanned temporary closure shall also apply to unplanned permanent closure.	Within 90 days of permanent closure	PG&E	9/29/2010	CGS10-L-0111	Approved via email 10/15/10	
COM-14	CONS	Post-Certification Changes to the Decision		As required	PG&E			Amendments are discussed in MCR	
CUL-04	CONS	Prepare the Cultural Resources Report (CRR) in ARMR format. Include all information specified in Condition.	Submit CRR within 90 days after completion of ground disturbance (including landscaping).	Within 90 days after completion of landscaping	PG&E	7/28/2011	CGS11-L-0026	Approved 4/9/13	
GEN-01c	OPS	Once the certificate of occupancy has been issued, inform the CPM of any construction, addition, alterations, moving, demolition, repair, or maintenance to be performed on any portions of the completed facility for the purpose of complying with the above stated codes.	Submit required info to the CPM.	At least 30 days prior to such work	PG&E				
GEN-08	CONS	Obtain the CBO's final approval of all completed work that has undergone CBO design review and approval. The Project Owner shall request the CBO to inspect the completed structure and review the submitted documents. The Project Owner shall retain one set of approved engineering plans, specifications, and calculations at the project site or other accessible location during the operation of the project.	Submit to the CBO a written notice that the completed work is ready for inspection and a signed statement that the work conforms to the final approved plans.	Within 15 days of completion of any work	PG&E/CBO				
HAZ-01	OPS	Do not use any hazardous material in any quantity or strength not listed in Appendix C unless approved in advance by the CEC CPM.	Report to the CPM a list of hazardous materials and storage quantities contained at the facility	Include in Annual Compliance Report	PG&E			Ongoing	
NOISE-02	OPS	Throughout the construction and operation of the project, document, investigate, evaluate, and attempt to resolve all project-related noise complaints. Noise Complaint Resolution process will be used.	File a Noise Complaint Resolution Form with the City and the CPM documenting resolution of the compliant.	Within 5 days of receiving a noise compliant	PG&E				
NOISE-08	OPS	In the event legitimate noise complaints are made by owners or occupants at the two residences locate at ML1, ML2, or RC1 during operation of the CGS, the Project Owner shall offer to pay for the following noise attenuating upgrades (see list in Condition).	Upgrades shall be installed (unless impossible due to circumstances beyond Project Owner's control) within six months of the receipt of the compliance. Provide documentation certifying the items listed in the Condition.	As required	PG&E			Ongoing	

Cond. #	Sort Code	Description of Project Owner's Responsibilities	Verification/Action/Submittal Required by Project Owner	Timeframe	Lead Respons. Party	Date sent to CEC, CBO or agency	Log Number	Status	Comments
PAL-06	OPS	Through the designated PRS, shall ensure that all components of the PRMMP are adequately performed including collection of fossil materials, preparation of fossil materials for analysis, analysis of fossils, identification and inventory of fossils, the preparation of fossils for curation, and the delivery for curation of all significant paleontological resource materials encountered and collected during project construction .	Maintain in compliance file copies of signed contracts or agreements with the designated PRS and other qualified research specialists. Maintain these files for a period of three years after completion and approval of the CPM-approved Paleontological Resources Report.	As required					
SOIL & WATER-04b	OPS	Notify the CEC of any violations of the agreement requirements, limits or amounts.	Provide copies of any NOVs from the GCID. Fully explain corrective actions in next MCR.	Within 10 days of NOV	PG&E			Ongoing	
SOIL & WATER-07b	OPS	Submit any required monitoring information to the CPM in the annual compliance report.	Submit requested information.	Include in ACR	PG&E			Ongoing	
SOIL & WATER-07c	OPS	Submit copies of an NOVs to the CPM.	Submit requested info to CPM.	Within 10 days of receipt of NOV; explain correction actions in ACR	PG&E			Ongoing	
SOIL & WATER-08b	OPS	Prepare an annual water use summary which includes the monthly range and monthly average of daily raw water usage in gpd and total water used by the project on a monthly and annual basis in acre-feet. Potable water use on the site shall be recorded on a monthly basis. (See additional details for annual water use summary in Condition)	Submit requested info to CPM.	Annually	PG&E			Ongoing	
SOIL & WATER-09c	OPS	Monitor the waste water system following the general standards adopted in the SWRCB's onsite wastewater treatment system regs or the procedures outlined in the CPM-approved O&M manual. Provide testing results.	Provide requested into to CPM.	Include in ACR	PG&E			Ongoing	
TLSN-03	OPS	Take reasonable steps to resolve any complaints of interference with radio or TV signals from operation of the proposed lines.	Provide reports of line-related complaints along with related mitigation measures in the annual report for the first five year.	Include in ACR	PG&E			Ongoing	
VIS-01b	OPS	Notify the CPM that the surface treatment of all listed structures and buildings has been completed and is ready for inspection and submit electronic color photographs taken from the same KOPs	Set up an inspection appointment.	Within 90 days of start of commercial ops	PG&E	3/24/2011	CGS11-L-0014	4/11/2011	
VIS-02b	COMM	Notify the CPM that the lighting has been completed and is ready for inspection.	Set up an inspection appointment.	Prior to start of commercial operation	Gemma	9/19/2011	CGS11-L-0036	Approved 9/29/2011	
VIS-02c	OPS	Notify the CPM of any complaints re: lighting.	Submit a complaint resolution form to the CPM record each lighting complaint and document resolution of that complaint.	Within 48 hours after receiving a complaint	PG&E			Ongoing	

Cond. #	Sort Code	Description of Project Owner's Responsibilities	Verification/Action/Submittal Required by Project Owner	Timeframe	Lead Respons. Party	Date sent to CEC, CBO or agency	Log Number	Status	Comments
VIS-03	CONS	Provide landscaping that reduces the visibility of the power plant structures and complies with local policies and ordinances. Trees shall be strategically placed along the southern, eastern, and northern facility boundaries as appropriate and of sufficient density and height to screen the plant structures to the greatest feasible extent within the shortest feasible time.	Prepare and submit a landscaping plan (see Condition for details on info to include in plan) to the CPM for review and approval and to the County for review and comment.Notify the CPM and County within 7 days after completing installation of landscaping. Report on landscape maintenance activities in ACR.	At least 90 days prior to installation of landscaping -	PG&E			Submitted 8/25/2010 Approved 9/14/2010 Ongoing for Annual Report	
WASTE-04	CONS	Upon becoming aware of any impending waste management-related enforcement action by any local, state, or federal authority, the Project Owner shall notify the CPM of any such action taken or proposed to be taken against the project itself, or against any waste hauler or disposal facility or treatment operator with which the owner contracts.	Notify the CPM in writing within 10 days of becoming aware of an impending enforcement action. The CPM shall notify the project owner of any changes that will be required in the manner in which project-related wastes are managed.	As required	PG&E			Ongoing	
WASTE-05b	OPS	Prepare an Operations Waste Management Plan for all wastes generated during construction of the facility.	Submit plan to the CPM for review and approval. See Final Decision WASTE-5 for plan requirements.	Provide training sign-in sheets in first MCR Report in Annual Report	PG&E	9/23/2010	CGS10-L-0109	Approved on 10/18/10	

Attachment B
Project Operating Status Summary

Per Com-7 Item 2 we are to provide; "A Summary of the current project operating status and an explanation of any significant changes to the facility operations during the year"

There were no significant changes to the facility and the plant is operating normally.

Attachment C
Accompanying Documents

CEC 2025 Annual Compliance Report		
Reporting Conditions, per COM-7, Item 3		
Condition of Certification	**Reporting**	**Comments**
BIO-2	Designated Biologist Record Summaries	See attached documentation, Appendix 1
HAZ-1	List of chemicals onsite	See attached documentation, Appendix 2
Noise-8	Noise Complaints	See attached documentation, Appendix 3
SOIL & WATER-2	SWPPP Monitoring and Maintenance Activities	See attached documentation, Appendix 4
SOIL & WATER-7	GCID Monitoring Requirements / Violations	See attached documentation, Appendix 5
SOIL & WATER-8	Annual Water Use Summary	See attached documentation, Appendix 6
SOIL & WATER-9	Septic Tank	See attached documentation, Appendix 7
TLSN-3	Electro Magnetic Interference Complaints	See attached documentation, Appendix 8
VIS-1	Surface Treatment Report	See attached documentation, Appendix 9
VIS-3	Landscape Report	See attached documentation, Appendix 10
WASTE-5	Waste Management Plan	See attached documentation, Appendix 11

Appendix 1, BIO-2

During project operation, the Designated Biologist shall submit record summaries in the annual compliance report unless their duties are ceases as approved by the CPM.

Colusa Generating Station (06-AFC-09C), California Energy Commission Annual Compliance Report Biology Section 2025

Date: January 9, 2026
Project Name: Colusa Generating Station 2025 Environmental On-Call Support Project
Project No: D31321ER
Attention: TJ Gomez, Compliance Manager (PG&E)
Client: Pacific Gas and Electric Company (PG&E)
Prepared By: Scott Lindemann/CGS Designated Biologist and Danny Rivas/Biologist (Jacobs)
Document No: 260105080120_31ca20cf
Copies to: Dean Linville and Joshua Harris (PG&E), Jerry Salamy (Jacobs)

---

1. Introduction

The California Energy Commission's (CEC's) Condition of Certification (COC) for the Colusa Generating Station (CGS) 2025 Environmental On-call Support Project (the Project) requires Pacific Gas and Electric Company (PG&E) to designate a biologist to supervise compliance with mitigation measures outlined in the CEC-approved Biological Resources Mitigation, Implementation, and Monitoring Plan (BRMIMP) during CGS's operations phase (CH2M HILL 2008). This report fulfills CEC COC BIO-2, Subsection 8. PG&E has complied with the CEC's COC by directing the Designated Biologist (DB) to perform pre-disturbance surveys, perform wildlife relocation when dangerous animals (such as rattlesnakes) are encountered onsite, and coordinate with CGS staff to avoid or minimize impacts to the environment. This report covers the reporting period from January 1, 2025, to December 31, 2025 (the Reporting Period).

1.1 Project Location

The CGS is located approximately 4 miles west of Interstate 5, 7.1 miles northwest of the city of Maxwell, in Colusa County, California. The power plant is immediately west of PG&E's Delevan Natural Gas Compressor Station on Dirks Road. It is in the eastern half of Section 35, Township 18 North, Range 4 West, and is in the "Sites" United States Geological Survey 7.5-minute quadrangle.

1.2 Background

The CGS was built in 2010 and began commercial operation on December 22, 2010. The CGS was designed to avoid biological resources to the greatest extent through the development of mitigation and protection measures in consultation with the U.S. Fish and Wildlife Service, U.S. Army Corps of Engineers, California Department of Fish and Wildlife (CDFW), Central Valley Regional Water Quality Control Board, and the CEC. PG&E complied with all applicable COCs during construction and continues to implement applicable COCs during CGS operations, including routine maintenance and outage events.

1.2.1 Bat Mortality

Bat fatalities were first discovered at CGS beneath the air-cooled condenser (ACC) in 2016. In the summer of 2016, PG&E enlisted Garcia and Associates (GANDA, now Kleinfelder) wildlife biologist Heather Johnson to survey the ACC and make recommendations for minimizing bat mortalities, many of which have been implemented (see more below).

It is not currently understood why bats are attracted to the ACC now, when they were not previously, but theories include the following: (1) an orchard planted adjacent to CGS in 2012 provides bat roosting and foraging habitat, and (2) the ACC may resemble suitable roosting and foraging habitat for bats using the adjacent orchard. It is also not currently understood how bats are entering the ACC.

In 2019, CGS staff installed screening to cover an 11-inch gap between the ACC grating and the bottom of the fan plenum, which eliminated raptors and passerines from entering the ACC. However, it did not prevent bats from entering the ACC, as carcasses continue to be detected within and below the ACC.

Two acoustic and visual surveys, including infra-red video, performed in September 2019 were inconclusive on how the bats are entering the ACC. The surveys recorded 15 visual observations of flying bats foraging in the air surrounding the ACC; however, no bats were recorded flying into the cells from underneath the ACC or through any gaps.

In the fall of 2020, in accordance with the recommendations for minimizing bat mortalities, CGS staff installed new light-emitting diode lighting inside and outside of the ACC, in part to deter bats from the ACC. During 2021, CGS operated the lighting inside the ACC and on the walkway 24 hours per day, which may have contributed to lower bat mortality in and under the ACC in 2021.

In September 2025, CGS began the installation of exclusion netting directly beneath the ACC fans to mitigate bats from entering from the fan blades. Netting underneath the ACC fans is estimated to be completed in the 2026 Reporting Period.

2. Methods

The CEC-approved DB or Biological Monitor (BM) performed pre-disturbance surveys; captured and relocated wildlife encountered onsite that were in harm's way or could potentially be harmful to facility employees; and coordinated with CGS staff to avoid or minimize impacts to the environment. The DB remained on call throughout the Reporting Period.

All new CGS employees and contract workers received the CEC-approved Worker Environmental Awareness Program training via video, an illustrated pamphlet, as well as lecture and daily tailgate trainings with the DB or the PG&E CGS Compliance Manager.

During the active season for rattlesnakes (defined for this document as approximately March to October), the DB or BM conducted surveys of CGS approximately weekly to detect and relocate rattlesnakes before they entered the plant and posed a danger to operations staff. CGS management has requested the DB/BM and CGS Compliance Manager maintain staff safety by humanely reducing the population of rattlesnakes in

the following areas: along the switchyard perimeter, the stormwater detention pond slopes, and a backup water supply pump at the Glenn-Colusa Canal (GCC) (which is owned and maintained by PG&E in case the water in the Tehama-Colusa Canal is not available or usable). These areas are surveyed because they are part of the power plant infrastructure and, historically, have high rattlesnake activity. All rattlesnakes captured in 2025 were released unharmed offsite.

The DB or BM also conducted surveys to collect bat carcasses observed beneath the ACC throughout the bat migration and breeding season (defined for this document as approximately May through October).

3. Results and Discussion

The CGS complied with all biological resources conditions of certification, mitigation, and protection measures covered in the BRMIMP applicable to this operating facility during the Reporting Period. Monitoring and compliance for the Reporting Period are documented in chronological order in Appendix A. Site photographs are presented in Appendix B.

3.1 Rattlesnakes

Northern Pacific rattlesnakes (*Crotalus oreganus oreganus*) continued to occur in the project area during the 2025 Reporting Period. A total of 27 rattlesnakes were relocated on or adjacent to the project site, which was one less from the number detected in the 2024 Reporting Period (28 rattlesnakes) and about equal to the median number of 29 rattlesnakes per year from years 2011 to 2024. Six rattlesnakes were detected inside the CGS in 2025, which was one greater than found inside the CGS than the previous 2024 Reporting Period. The remaining 21 rattlesnakes in the 2024 Reporting Period were detected outside of, but adjacent to, the CGS (Table 1 and Appendix C). All rattlesnake observations during the Reporting Period occurred within the PG&E CGS parcel (which is approximately 100 acres in size).

Table 1. Rattlesnakes Detected in 2025

	Outside Plant	Inside Plant	Total
Rattlesnakes	21	6	**27**

3.2 Bats

As described in Section 1.2.1, bat mortality remains a concern at CGS.

3.2.1 Bat Carcass Survey Results

A total of 139 bat carcasses were detected on the CGS site in the Reporting Period (Table 2 and Table D-1 in Appendix D). Bat species detected in the 2025 Reporting Period include: Myotis species (little brown bat [*Myotis lucifugus*] or Yuma myotis [*M. yumanesis*]) and Mexican free-tailed bat (*Tadarida brasiliensis*).

In the 2025 Reporting Period, bat fatalities were mainly from Myotis species observed immediately beneath the ACC structure (Table 2). Of the eight bat carcasses collected in areas other than immediately beneath the ACC, a majority were found along the fence immediately west of the ACC or in the CGS warehouse building.

Table 2. Bat Carcasses by Species and Location

Bat Species Observed	Under ACC	Outside ACC	Totals
Myotis (little brown bat or Yuma myotis)	118	8	126
Mexican free-tailed bat	8	0	8
Western red bat	0	0	0
Big brown bat	0	0	0
Hoary bat	0	0	0
Pallid bat	0	0	0
Unidentified	5	0	5
Totals	**131**	**8**	**139**

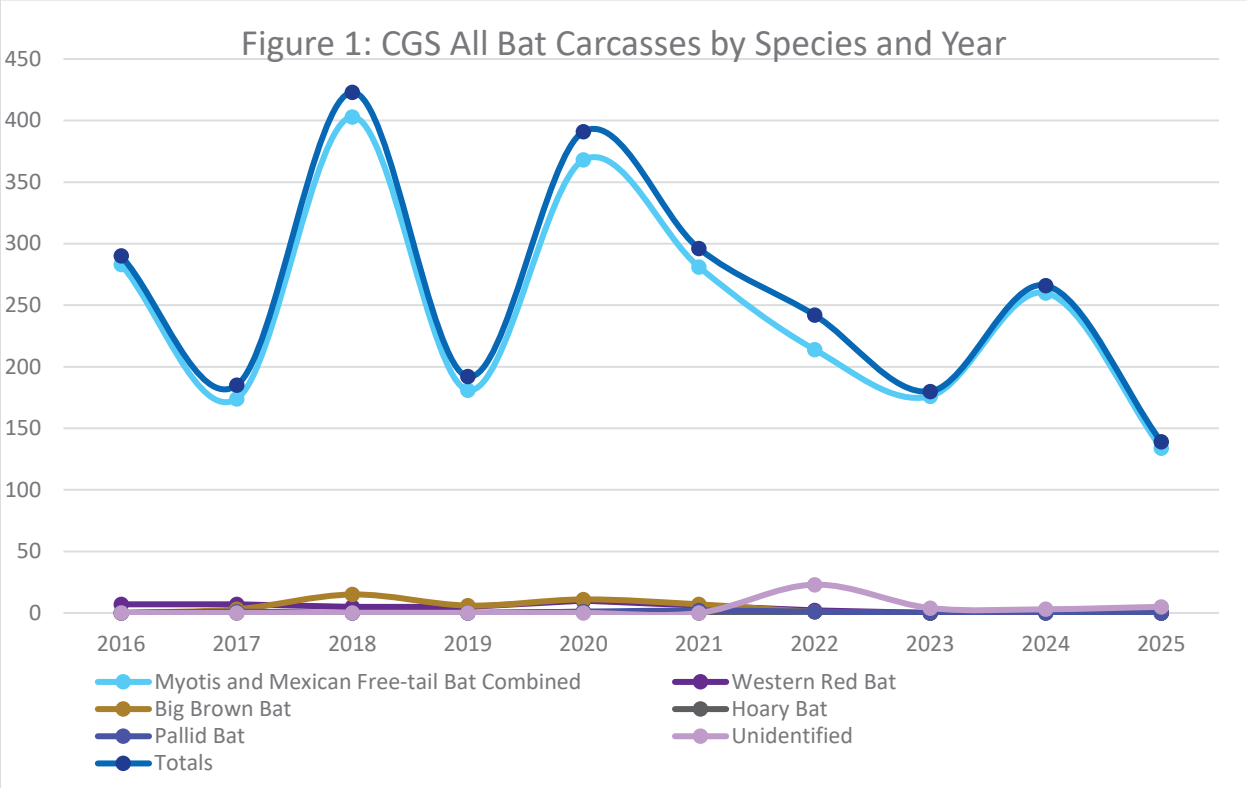
Two live Myotis species bats were encountered during the 2025 Reporting Period and were relocated outside the facility (Appendix B, Photo 14, Appendix D).

Table 3. Bat Carcass Totals by Species and Year

Year	Myotis	Mexican Free-tailed Bat	Myotis and Mexican Free-tailed Bat Combined	Western Red Bat	Big Brown Bat	Hoary	Pallid	Unidentified	Totals
2025	126	8	134	0	0	0	0	5	**139**
2024	252	8	260	1	2	0	0	3	**266**
2023	171	5	176	0	0	0	0	4	**180**
2022	198	16	214	2	1	1	1	23	**242**
2021	271	10	281	6	7	0	2	0	**296**
2020	359	9	368	10	11	1	1	0	**391**
2019	174	7	181	5	6	0	0	0	**192**
2018	-	-	403	5	15	0	0	0	**423**
2017	-	-	174	7	3	0	1	0	**185**
2016	-	-	283	7	0	0	0	0	**290**

Table 3 and Figure 1 present bat carcass totals collected from 2016 to 2025. The 2025 Reporting Period was significantly below the average of 273 bat carcasses a year from 2016 to 2024. In comparison, during the 2025 Reporting Period, 139 bat carcasses were detected, a majority of which were Myotis species, with some Mexican free-tailed bats (Table 3).

Figure 1. CGS All Bat Carcasses by Species and Year



Tables 4 and 5 present the location of bat carcasses under the ACC by referencing the fan number above each carcass detection location.

The ACC is oriented such that Street #6, Row #7 is the northwestern corner, and Street #1, Row #1, is the southeastern corner.

Table 4. Bat Carcasses by Fan Location Under the ACC 2025

	Street #6	Street #5	Street #4	Street #3	Street #2	Street #1	Totals
Row #7	2	4	1	2	0	0	9
Row #6	4	10	2	3	6	0	25
Row #5	1	5	6	5	1	0	18
Row #4	4	9	8	10	4	1	36
Row #3	3	2	4	3	3	0	15
Row #2	3	7	3	3	4	2	22
Row #1	0	1	2	1	0	2	6
Totals	**17**	**38**	**26**	**27**	**18**	**5**	**131**

Note: Color coded for ease of interpretation, with green equating with lower counts and red equating with higher counts.

Based on the locations of bat carcasses recorded under the ACC during the 2025 Reporting Period, similar to the 2024 Reporting Period, Streets #3 and #5 recorded the most bat carcasses (Table 4). Most bat carcasses were typically found slightly west from the center of the ACC.

Table 5. Cumulative Bat Carcasses by Fan Location Under the ACC 2022–2025

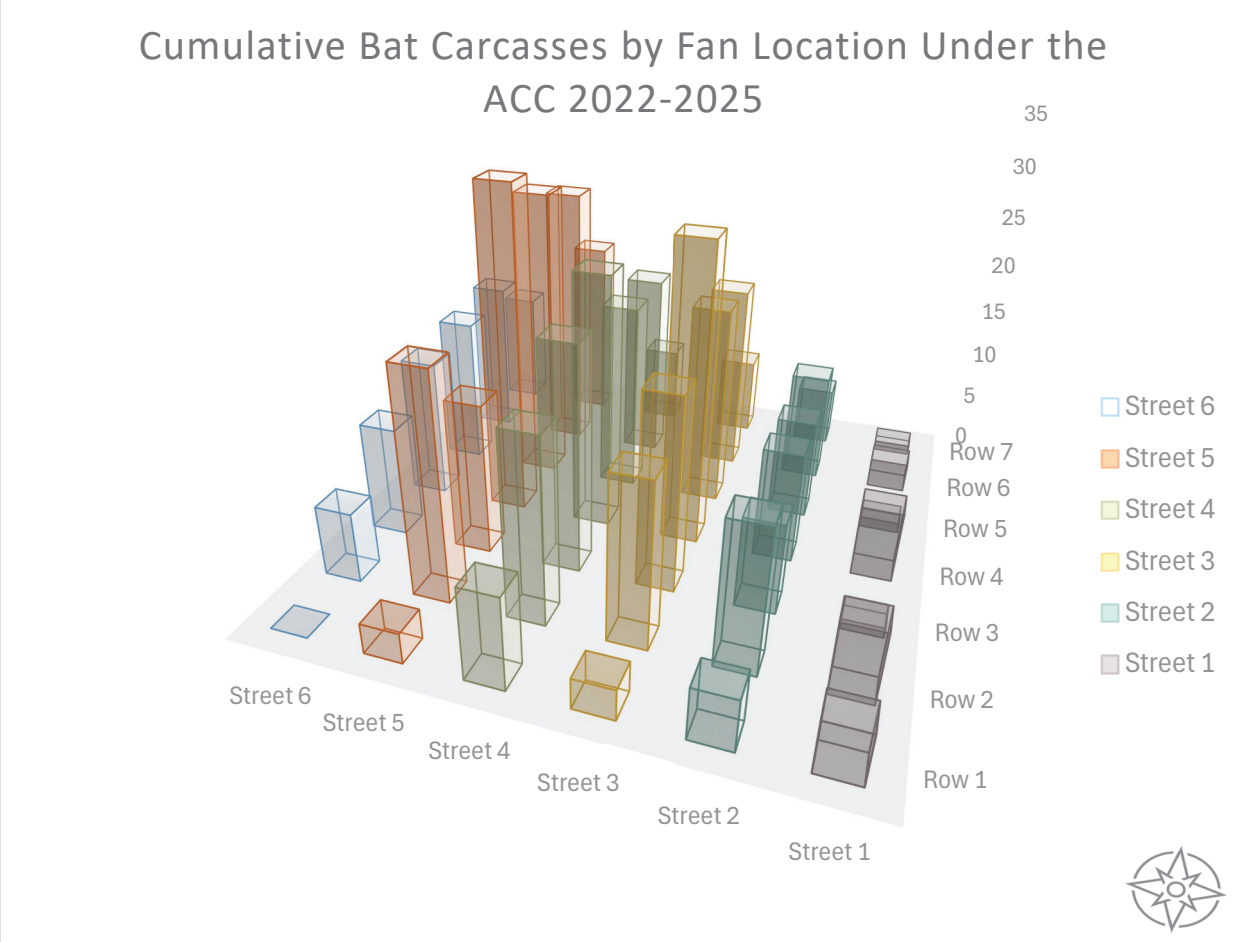
	Street #6	Street #5	Street #4	Street #3	Street #2	Street #1	Totals
Row #7	12	19	8	8	6	1	54
Row #6	16	27	19	19	11	3	95
Row #5	15	29	19	20	10	1	94
Row #4	14	32	25	29	11	7	118
Row #3	11	15	22	19	9	1	77
Row #2	7	22	18	16	14	7	84
Row #1	0	3	9	3	5	5	25
Totals	**75**	**147**	**120**	**114**	**66**	**25**	**547**

Note: Color coded for ease of interpretation, with green equating with lower counts and red equating with higher counts.

Street #5 continued to show the highest recorded bat carcasses under the ACC, followed by Streets #4 and #3. Bat carcass locations were concentrated between Streets #3 to #5 and Rows #3 and #6 (Table 5).

Figure 2 shows a three-dimensional representation of the cumulative bat carcass locations from 2022 to 2025 under each ACC cell, facing north. The DB and BM will continue to monitor and report onsite bat fatalities during the 2026 Reporting Period.

Figure 2. Cumulative Bat Carcasses by Fan Location Under the ACC 2022–2025



3.2.2 Other Bat Mortality Results and Discussion

PG&E purchased additional netting to cover a portion of the ACC below the fans. Installation of the exclusion netting below the ACC fans began in September 2025 and is still currently estimated to be completed in the 2026 Reporting Period.

During the 2025 Reporting Period, PG&E engaged bat expert Ryan Byrnes (Swaim Biological) to conduct a camera and acoustic study to collect data in an attempt to document how bats are entering the ACC building. DB Scott Lindemann and Mr. Byrnes conducted a reconnaissance survey of the ACC on August 4, 2025, to identify locations for installing cameras and bat acoustic detectors. On August 20, 2025, Mr. Byrnes, with assistance from the DB, BM, and CGS Compliance Manager TJ Gomez, installed two cameras and one acoustic bat detector in Street #4, Fan Room 5 (Fan 9045); one camera in Street #4, Fan Room 7 (Fan 9047); and one camera and one bat detector on the ground beneath the ACC facing upward, toward Street #4, Fan Room 5 (Fan 9045) (Appendix B, Photos 15 and 16).

Mr. Byrnes visited CGS on August 22, August 27, September 3, and September 11, 2025, to check and calibrate bat surveillance equipment and download data from the acoustic detectors and cameras. On September 15, 2025, CGS Compliance Manager TJ Gomez confirmed exclusion netting to the ACC fans would begin installation and requested that Mr. Byrnes remove the bat monitoring equipment at the ACC. Mr. Byrnes removed the bat monitoring equipment on September 19, 2025. During the site visit, Mr. Byrnes found a live *Myotis* sp. bat in Street #4, Fan Room 2, and contained and relocated the bat offsite.

3.3 Rock Pigeon Abatement

Rock pigeon (*Columba livia*), a non-native bird that was introduced from Europe in the 1600s, has become established at CGS, with dozens of birds nesting and perching among the CGS infrastructure. This species is not protected by the Migratory Bird Treaty Act; California Fish and Game Code; or any other federal, state, or local laws. Pigeon droppings potentially pose a human health hazard (through the transmission of disease as well as creating a slipping hazard) and were causing the corrosion of metal surfaces at CGS, decreasing operational readiness.

Therefore, CGS contracted Hawk Force during the spring season of the Reporting Period to perform nuisance bird (rock pigeon) abatement via commercial falconry and trapping at the facility. The use of commercial falconry and trapping for pest control and abatement was approved by the CEC in an email dated March 10, 2023. At CGS in 2025, Hawk Force removed in total 233 rock pigeons and Eurasian collared doves (*Streptopelia decaocto*) during the Reporting Period through falconry and trapping. The use of Hawk Force is expected to continue in 2026.

Additionally, in a request dated 12/16/25, CGS is seeking approval from the CEC to use bait that controls the reproduction of treated birds, causing the population to decline.

Appendix A
Biological Monitoring Site Visit Logs

Table A-1. Biological Monitoring Site Visit Log

Date	Biologist	Description
3/26/2025	BM Danny Rivas	The BM was onsite to conduct an interior survey of CGS for rattlesnakes. No rattlesnakes were found; however, two common garter snakes were observed outside the fence, south of the laydown yard area. One desiccated *Myotis* sp. bat carcass was found inside the warehouse. Wooden snake boards were not set, and pit traps remained sealed until the ground was dry enough to traverse.
4/2/2025	BM Danny Rivas	The BM was onsite to conduct an interior survey of CGS for rattlesnakes. No rattlesnakes or bat carcasses were found inside or outside the facility. Rattlesnake #1, a juvenile, was found south of the warehouse inside the fence by CGS staff. The rattlesnake was contained overnight in a locked cabinet onsite and relocated during the 4/2/2025 site survey. The snake boards were set along the outside of the Delevan Substation fence and south of the CGS warehouse.
4/3/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. No rattlesnakes were found during the interior survey of the site. Two desiccated Mexican free-tailed bat carcasses and two desiccated *Myotis* sp. bat carcasses were found under the ACC. An active black phoebe (*Sayornis nigricans*) nest, with the female incubating five eggs, was found under the main steam exhaust pipe, northeast of the ACC (Appendix B, Photo 1). The nest is reused annually throughout the spring and summer seasons. The location of the nest is in a high noise disturbance area, and it is likely acclimated to the noise generated by the facility. The BM recommended that CGS staff avoid peering over to avoid potentially disturbing the nest.
4/4/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. No rattlesnakes were found during the interior survey of the site. The exterior portion of the site survey was not performed. While checking under the ACC, two desiccated *Myotis* sp. bat carcasses were found. The carcasses found under the ACC from 4/3/2025 and 4/4/2025 were likely older carcasses dislodged from the ACC fan rooms the previous year based on their advance state of decay.
4/7/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. No rattlesnakes were found during the interior survey of the facility. Two desiccated *Myotis* sp. bat carcasses were found under the ACC. The carcasses found were likely from the previous year based on the state of decay. A house finch (*Haemorhous mexicanus*) nest was found east of the warehouse behind a metal box (Appendix B, Photo 2). House finches were observed foraging near the nest, but the BM could not confirm whether the nest was being incubated or if it contained eggs. The laydown area surrounding the nest typically has parked cars and staged materials. The BM recommend leaving the nest undisturbed for now since these house finches are habituated to vehicle noise and foot traffic. Rattlesnake #2 was found on the night of 4/7/2025 west of the ACC on the access road inside the fence and was contained by CGS night staff (Appendix B).
4/9/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. No rattlesnakes or bat carcasses were found during the site survey. Rattlesnake #2 was released offsite by the BM during the 4/9/2025 exterior survey. Additional snake boards were installed north and west of the ACC, outside the fence, prior to leaving the facility.

Date	Biologist	Description
4/14/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. Rattlesnake #3 was found outside the fence, west of the ACC, under a snake board. Rattlesnake #4 was found during the exterior survey, north of the Delevan Substation, also under a snake board. Both juvenile rattlesnakes were relocated outside the facility. No bat carcasses were found during the interior survey of the facility. One active house finch nest containing five eggs was found behind the CEMS1 building atop Airgas canisters (Appendix B, Photo 3). This nest has been reused in the past by house finches and is habituated to the noise generated by the facility and foot traffic associated with maintenance activities. CGS staff were made aware of the active nest location and status.
4/16/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. No rattlesnakes or bat carcasses were found during the interior survey of the facility. The exterior portion of the site survey was not performed. One adult European starling (*Sturnus vulgaris*) was removed from a pit trap near the main entrance and released outside by the contractor sign-in trailer (Appendix B, Photo 4). The BM recommended CGS staff check pit traps to make certain no rattlesnakes are present.
4/21/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. No rattlesnakes were found during the interior survey of the facility. The exterior portion of the site survey was not performed. One desiccated Mexican free-tailed bat carcass was found under the ACC. The BM reported to CGS staff a small gap in the back gate that had reopened from last year's repair.
4/23/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. No rattlesnakes were found during the interior survey of the facility. The exterior portion of the site survey was not performed. One desiccated Mexican free-tailed bat carcass was found under the ACC.
4/28/2025	BM Danny Rivas	The BM was onsite to monitor vegetation mowing and disking outside the fence and to survey for rattlesnakes (Appendix B, Photo 5). No bird nests were encountered during mowing or disking operations. During vegetation management, the BM contained and relocated four rattlesnakes, primarily found atop riprap near culverts. Rattlesnake #5 was found outside the fence north of the Delevan Substation under a snake board. Rattlesnake #6 was found near a culvert south of Noel Evans Road, and Rattlesnakes #7 and #8 were both found on the edge of a riprap pile beneath vegetation north of the perimeter road. One additional rattlesnake was observed in the riprap near where Rattlesnake #6 was found, but it avoided containment. One gopher snake (*Pituophis catenifer*) was found east of the triangle grass patch and relocated away from the vegetation clearing operations.
4/29/2025	BM Danny Rivas	The BM was onsite to monitor vegetation mowing and disking outside the fence and to survey for rattlesnakes (Appendix B, Photo 6). No bird nests were encountered during mowing or disking operations. No rattlesnakes were contained. The rattlesnake observed on 4/28/2025 that avoided containment remained in the same spot under riprap. One gopher snake was found under a snake board south of the laydown yard outside the fence.
4/30/2025	BM Danny Rivas	The BM was onsite to monitor vegetation mowing and disking outside the fence on PG&E property and to survey for rattlesnakes (Appendix B, Photo 7). No bird nests were encountered during mowing or disking operations. Three rattlesnakes were contained outside the fence and relocated offsite. Rattlesnake #9 was found outside the fence south of the laydown yard; Rattlesnake #10 was found near the GCID bridge next to the traffic barrier; and Rattlesnake #11 was found near a culvert east of the Delevan Substation. Two additional rattlesnakes were observed near the GCID bridge, one under a traffic barrier and the other under riprap, but both avoided containment. One California kingsnake (*Lampropeltis californiae*) was found underneath a board northwest of the detention pond near the back access road.

Date	Biologist	Description
5/7/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. No bat carcasses were found under the ACC or during the interior portion of the site survey. Rattlesnake #12 was found north of the perimeter access road at the edge of a riprap pile beneath vegetation. An additional adult rattlesnake was observed beneath the riprap pile, but it could not be contained. Rattlesnake #12 was relocated offsite. Six ducklings were found inside one of the pit traps at the back gate (Appendix B, Photo 8). All six ducklings appeared healthy and were returned to the adult female mallard at the detention pond. The female mallard was later observed brooding over the ducklings along the bank of the detention pond. The BM recommended periodically checking the exterior pit traps to make certain no rattlesnakes or other wildlife have fallen in. The house finch nestlings at the reused nest north of the CEMS1 building were beginning to develop plumage (Appendix B, Photo 9). The BM recommended avoiding work directly under the nest at the CEMS1 building for the next 2 weeks until the nest has fledged. The nest is already habituated to noise generated by the facility and foot traffic.
5/16/2025	BM Sean O'Neil	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. Rattlesnakes #13 and #14 were found outside the fence northwest of the ACC on a pile of riprap and contained by CGS staff on 5/14/2025. Both rattlesnakes were later relocated by BM Sean O'Neil on 5/16/2025. No bat carcasses were detected during the site survey.
5/21/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. No rattlesnakes or bat carcasses were found during the interior survey of the facility. The exterior portion of the site survey was not performed. A mostly intact gopher snake shed was found in the fabrication storage area west of the control room. No gopher snakes were observed during the interior survey. The house finch nest north of the CEMS1 building had fledged and was empty. One alligator lizard was found under a metal sheet next to HRSG 2 and was relocated outside the fence.
5/28/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. Rattlesnake #15 was found outside the fence, west of the ACC, under a snake board; and Rattlesnake #16 was found near the access gate to the irrigation canal while relocating Rattlesnake #15. Both rattlesnakes were relocated offsite. The exterior portion of the site survey was not performed. Five desiccated *Myotis* sp. bat carcasses and one desiccated Mexican free-tailed bat carcass were found under the ACC. An additional desiccated *Myotis* sp. bat carcass was found next to the fence west of the ACC. All bat carcasses were collected, photographed, and disposed of onsite.
6/4/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. No rattlesnakes were found during the interior survey of the facility, and the exterior portion of the site survey was not performed. One desiccated *Myotis* sp. bat carcass and one old, unidentified bat carcass missing most of its distinguishing features were found under the ACC. The bat carcasses were collected, photographed, and disposed of onsite. One active black phoebe nest with chicks present was observed at the reused nest under the main ACC duct (Appendix B, Photo 10).
6/6/2025	BM Danny Rivas	The BM was called onsite by the CGS control room to relocate Rattlesnake #17, a juvenile found beneath the CT#1 building entrance by night staff. Rattlesnake #17 was contained and safely relocated outside the facility on the night of 6/6/2025.
6/9/2025	BM Danny Rivas	The BM was called onsite by the CGS control room to relocate Rattlesnake #18, a juvenile found next to the control room at the northern entrance by night staff (Appendix B, Photo 11). Rattlesnake #18 was contained in a locked cabinet onsite until 6/11/2025, when it was relocated offsite by the BM.

Date	Biologist	Description
6/11/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. No rattlesnakes were found during the interior survey of the facility; and Rattlesnake #18, which had been contained on the night of 6/9/2025, was relocated offsite. The exterior portion of the site survey was not performed. Three desiccated *Myotis* sp. bat carcasses were found under the ACC. The bat carcasses were collected, photographed, and disposed of onsite. The black phoebe nest observed at the reuse location under the main ACC duct remained active. A fledgling American kestrel (*Falco sparverius*) was observed flying west-southwest of the ACC and was occasionally seen perched on the fence. A gap was noted in the mesh lining of the fence exterior at the visitor parking lot east of the warehouse. The gap is large enough for snakes to enter the site. The BM recommended closing the gap to reduce the potential for snakes to enter the facility.
6/18/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. No rattlesnakes were found during the interior survey of the facility, and the exterior portion of the site survey was not performed. Three desiccated *Myotis* sp. bat carcasses were found under the ACC, and one additional *Myotis* sp. bat carcass was found next to the fence west of the ACC. All bat carcasses were collected, photographed, and disposed of onsite. The black phoebe nestlings observed at the reused nest under the main ACC duct had fledged. The gap in the mesh lining of the fence exterior at the visitor parking lot east of the warehouse was still present. The BM recommended closing this gap to reduce the potential for snakes to enter the facility.
6/25/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. No rattlesnakes were found during the interior survey of the facility, and the exterior portion of the site survey was not performed. One desiccated *Myotis* sp. bat carcass was found under the ACC and was disposed of after identification. The gap in the mesh lining of the fence exterior at the visitor parking lot east of the warehouse was still present. The BM recommended closing this gap to reduce the potential for snakes and rodents to enter the facility.
7/2/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. Rattlesnake #19 was found under a snake board outside the fence, north of the ACC. No additional rattlesnakes or bat carcasses were found during the interior survey of the facility. The gap in the mesh lining on the exterior fence at the visitor parking lot east of the warehouse was still present. The BM recommended closing this gap to reduce the potential for snakes and rodents to enter the facility.
7/9/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. No rattlesnakes were found during the interior survey of the facility, and the exterior portion of the rattlesnake survey was not performed. Two desiccated *Myotis* sp. bat carcasses and one unidentified bat carcass were found under the ACC. The gap in the mesh lining on the exterior fence at the visitor parking lot east of the warehouse was backfilled and closed. The BM recommended securing the top of the outer mesh lining to the fence to prevent wildlife from climbing into the facility.
7/16/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. No rattlesnakes were found during the interior survey of the facility or during the pre-activity sweep of roadside vegetation along Noel Evans Road, east of the GCID bridge. Two fresh rattlesnake sheds were observed under the traffic barriers near the bridge. The vegetation contractor crew completed clearing the roadside vegetation at Noel Evans Road and did not encounter any bird nests or special-status species (Appendix B, Photo 12). Five fresh and five desiccated *Myotis* sp. bat carcasses were found under the ACC; they were photographed and disposed of after collection. The BM also recommended removing a yellow jacket wasp nest found on a fence post east of the ACC.

Date	Biologist	Description
7/18/2025	BM Danny Rivas	The BM was called by the CGS control room to contain Rattlesnake #20, which was found by CGS night staff inside the water treatment building under the floor grating near the eyewash station (Appendix B, Photo 13). The rattlesnake was safely contained and left in a locked cabinet at the facility to be relocated on 7/23/2025.
7/23/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. No rattlesnakes were found during the interior survey of the facility, and the exterior portion of the site survey was not performed. Rattlesnake #20, which was found by CGS staff under the floor grating at the water treatment building and contained last Friday (7/18) was relocated offsite. Four desiccated and one fresh *Myotis* sp. bat carcasses were found under the ACC; they were photographed and disposed of after collection.
7/30/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. No rattlesnakes were observed during the interior survey of the facility, and the exterior portion of the site survey was not conducted. Four desiccated and five fresh *Myotis* sp. bat carcasses were found under the ACC. Additionally, one live *Myotis* sp. bat was found grounded beneath the ACC and was relocated to the orchards off Dirks Road (Appendix B, Photo 14). All bat carcasses were photographed, collected, and disposed in the trash receptacle located in the northwestern corner of the ACC.
8/4/2025	DB Scott Lindemann	DB and Swaim Biological bat expert Ryan Byrnes performed a site reconnaissance survey of the ACC to determine locations to install cameras and acoustic bat detectors.
8/6/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. No rattlesnakes were observed during the interior survey of the facility, and the exterior portion of the site survey was not conducted. Five desiccated and three fresh *Myotis* sp. bat carcasses were found under the ACC. All bat carcasses were photographed, collected, and disposed of in the trash receptacle located in the northwestern corner of the ACC.
8/13/2025	BM Danny Rivas	No rattlesnakes were observed during the interior survey of the facility, and the exterior portion of the site survey was not conducted. Two desiccated Mexican free-tailed bat carcasses, one fresh *Myotis* sp., and eleven desiccated *Myotis* sp. bat carcasses were found under the ACC. All bat carcasses were photographed, collected, and disposed of in the trash receptacle located in the northwestern corner of the ACC.
8/20/2025	DB Scott Lindemann and BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. Rattlesnake #21, a deceased adult, was observed outside the fence west of the ACC; and Rattlesnake #22 was observed beneath a snake board north of the ACC outside the fence. The rattlesnake carcass was removed from the area, and Rattlesnake #22 was safely relocated offsite. The exterior portion of the site survey was not conducted. Seven desiccated *Myotis* sp. bat carcasses were found beneath the ACC. Additionally, one desiccated *Myotis* sp. carcass was found next to the western rollup door of the warehouse, and another desiccated *Myotis* sp. carcass was found between the HRSGs. All bat carcasses were photographed, collected, and disposed of in the trash receptacle located in the northwestern corner of the ACC. Following the survey, the BM assisted bat biologist Ryan Byrnes (Swaim Biological) and DB Scott Lindemann with the initial setup of acoustic bat detectors and cameras inside the ACC (Appendix B, Photo 15). Swaim Biological biologist Ryan Byrnes and DB Scott Lindemann continued installing bat monitoring equipment inside and beneath the ACC under the supervision of PG&E Compliance Manager TJ Gomez. Two cameras and one acoustic bat detector were installed in Street #4, Fan Room 5 (Fan 9045); one camera was installed in Street #4, Fan Room 7(Fan 9047); and one camera and one bat detector were installed on the ground beneath the ACC facing upward (Appendix B, Photo 16) toward Street #4, Fan Room 5 (Fan 9045).

Date	Biologist	Description
8/27/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. No rattlesnakes were observed during the interior or exterior portions of the site survey. Fourteen bat carcasses were found under the ACC: seven desiccated *Myotis* sp., three fresh *Myotis* sp., one fresh Mexican free-tailed bat, one desiccated Mexican free-tailed bat, and one unidentified partial bat carcass. Three additional desiccated *Myotis* sp. carcasses were found west of the ACC adjacent to the fence. All bat carcasses were photographed, collected, and disposed of in the trash receptacle located in the northwestern corner of the ACC. Bat biologist Ryan Byrnes (Swaim Biological) was also onsite to check and replace memory cards for the cameras and acoustic bat detectors currently deployed at the ACC.
9/3/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. No rattlesnakes were observed during the interior survey of the facility. Eighteen bat carcasses were found under the ACC: sixteen desiccated *Myotis* sp., one fresh *Myotis* sp., and one unidentified partial bat carcass. All bat carcasses were photographed, collected, and disposed of in the trash receptacle located in the northwestern corner of the ACC. Multiple yellowjacket wasp nests were observed at the paved laydown yard west of the warehouse and near the fabrication rollup door and were reported to CGS staff. Bat biologist Ryan Byrnes (Swaim Biological) was also onsite to check and replace memory cards for the cameras and acoustic bat detectors currently deployed at the ACC.
9/10/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. Rattlesnake #23, a small juvenile, was found outside the fence underneath a board, north of the ACC. The snake was relocated offsite. Five desiccated *Myotis* sp. bat carcasses were found under the ACC. All bat carcasses were disposed of in the trash bin in the northwestern corner of the ACC.
9/17/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. No rattlesnakes were observed during the interior survey of the facility. Three desiccated and one fresh *Myotis* sp. bat carcasses were found under the ACC. All bat carcasses were disposed of in the trash bin in the northwestern corner of the ACC.
9/19/2025	Swaim Biologist Ryan Bynes	One live *Myotis* sp. bat was found by biologist Ryan Bynes (Swain Biological) in Fan Room 2 Street #4 while demobilizing bat monitoring equipment inside the ACC. The bat was captured and given water and released east of the CGS on a eucalyptus tree. The bat flew off to the west back toward the CGS and out of sight.
9/24/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. No rattlesnakes were observed during the interior survey of the facility, and the exterior portion of the site survey was not performed. Three desiccated bat carcasses (*Myotis* sp.) were found under the ACC. All bat carcasses were photographed, collected, and disposed of in the trash receptacle located in the northwestern corner of the ACC.
10/1/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. No rattlesnakes were observed during the interior survey of the facility, and the exterior portion of the site survey was not performed because of recent precipitation. Two desiccated bat *Myotis* sp. carcasses were found under the ACC. All bat carcasses were photographed, collected, and disposed of in the trash receptacle located in the northwestern corner of the ACC.

Date	Biologist	Description
10/8/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. No rattlesnakes were observed during the interior survey of the facility, and the exterior portion of the site survey was not conducted. Four desiccated *Myotis* sp. bat carcasses were found under the ACC. All bat carcasses were photographed, collected, and disposed of in the trash receptacle located in the northwestern corner of the ACC. During the perimeter fence walk, a burrow intrusion was observed beneath the fence north of the main entrance gate, along with fresh, dark-colored scat near the fence and under the ACC, indicative of wildlife entering the facility. Signs of erosion were also noted along the eastern side of the fence. The BM recommended backfilling these areas to prevent wildlife from entering the facility.
10/22/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. No rattlesnakes were observed during the interior survey of the facility, and the exterior portion of the site survey was not conducted. One desiccated *Myotis* sp. bat carcass and one old, unidentifiable partial bat carcass were found under the ACC. All bat carcasses were photographed, collected, and disposed of onsite in a trash receptacle located in the northwestern corner of the ACC. Small gaps in the perimeter fence caused by erosion were backfilled along the eastern side of the fence. All snake boards located outside the fence were removed for the remainder of the year.
10/24/2025	BM Danny Rivas	CGS staff found Rattlesnake #24, a juvenile, south of the east entrance adjacent to the perimeter fence. The rattlesnake was safely contained by CGS staff and relocated offsite by the BM.
10/29/2025	BM Danny Rivas	The BM was onsite to conduct a rattlesnake and bat carcass survey at CGS. Two juvenile rattlesnakes were observed outside the perimeter fence: Rattlesnake #25 was found under torn fabric south of the warehouse, and Rattlesnake #26 was found under a traffic cone north of the main gate entrance. Both rattlesnakes were safely relocated offsite. One desiccated *Myotis* sp. bat carcass was found under the ACC. The pit traps located near the eastern and western gates were closed for the year, and a gap underneath the fence near the main gate was backfilled to prevent wildlife intrusion.
11/10/2025	BM Danny Rivas	CGS staff found Rattlesnake #27, a juvenile, west of the warehouse beneath an insulation-wrapped pipe. The snake was safely contained and subsequently relocated offsite by the BM. During the rattlesnake relocation, one burrowing owl was observed west of the facility in the grassland adjacent to an irrigation canal.

ACC = air-cooled condenser
BM = Biological Monitor
CGS = Colusa Generating Station
DB = Designated Biologist
GCID = Glenn-Colusa Irrigation District
HRSG = heat recovery steam generator
PG&E = Pacific Gas and Electric Company

Appendix B
Site Photographs

Photo 1: An active black phoebe nest with five eggs was found beneath the main steam pipe connected to the air-cooled condenser (ACC) on April 1, 2025.

Photo 2: A house finch nest was found east of the warehouse behind a metal box on April 7, 2025. The Biological Monitor could not determine if the nest was being incubated or if it contained eggs.

Photo 3: One active house finch nest containing eggs was found behind the CEMS1 building atop Airgas canisters on April 14, 2025.

Photo 4: One European starling was removed from one of the pit traps next to the main entrance and released outside by the contractor sign-in trailer on April 16, 2025.

Photo 5: A Sierra Integrated Services vegetation management operator disking the grassland west of the ACC on April 28, 2025.

Photo 6: The Sierra Integrated Services vegetation management crew mowing the grass embankment east of the Delevan Substation on April 29, 2025.

Photo 7: The Sierra Integrated Services vegetation management crew mowing the grass at the roadside of Dirks Road on April 30, 2025.

Photo 8: Six ducklings were found inside one of the pit traps at the back gate on May 7, 2025. All six ducklings appeared to be healthy and were returned to the adult female mallard at the detention pond west of the ACC.

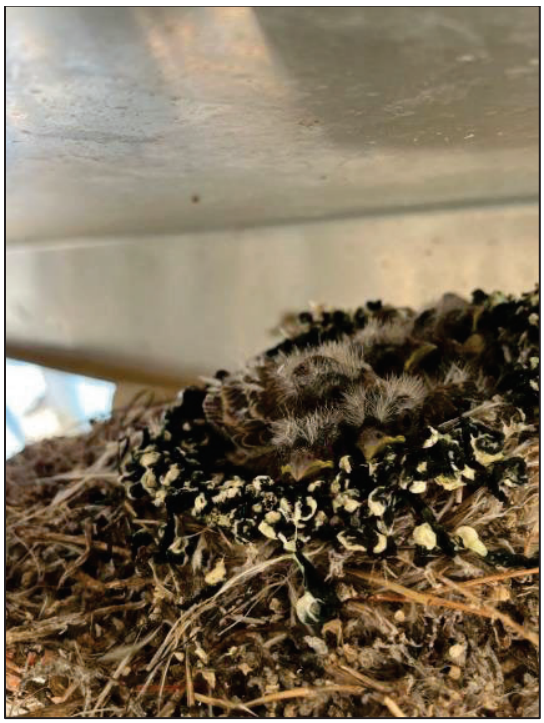

Photo 9: Five house finch nestlings at the reused nest north of the CEMS1 building showing some feather development on May 7, 2025.

Photo 10: An active black phoebe nest with three chicks present was under the main steam exhaust pipe, north of the ACC on June 4, 2025. The nest was previously observed being incubated on the previous brood on April 1, 2025.

Photo 11: Rattlesnake #18 was found next to the control room at the northern entrance by CGS night staff on June 9, 2025. Rattlesnake #18 was contained in a locked cabinet onsite until June 11, 2025, when it was relocated offsite during a site visit.

Photo 12: The Sierra Integrated Services vegetation management crew mowing the grass embankment east of the Delevan Substation on July 16, 2025.

Photo 13: Rattlesnake #20 was found by CGS staff inside the water treatment building under the floor grating by the eye washing station and was contained on July 18, 2025. It was kept in a locked cabinet until it was relocated on July 23, 2025, during a site visit.

Photo 14: A live *Myotis* sp. bat was found grounded under the ACC and later relocated offsite to an orchard on Dirks Road on July 30, 2025.

Photo 15: Mr. Bynes and Designated Biologist Scott Lindemann installed cameras and one acoustic bat detector in Street #4, Fan 5 (Fan 9045) within the ACC on August 20, 2025.

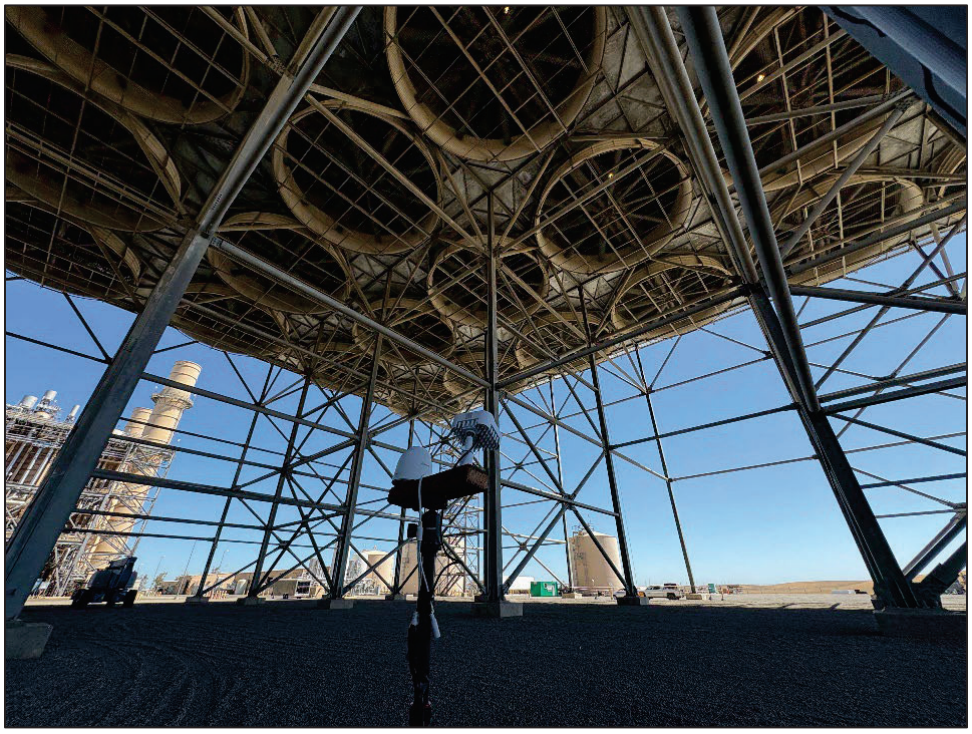

Photo 16: Mr. Bynes installed one camera and one acoustic bat detector underneath the ACC facing up at Street #4, Fan 5 (Fan 9045) on August 20, 2025.

Appendix C
Rattlesnake Table

Table C-1. Rattlesnakes Detected in 2025

Date	Total Daily Quantity	Inside Plant	Outside Plant	Notes
3/26/2025	0	0	0	None detected.
4/1/2025	1	1	0	CGS staff observed Rattlesnake #1, a juvenile, south of the warehouse inside the perimeter fence. The rattlesnake was safely contained by CGS staff and held overnight in a locked cabinet onsite until 4/2/2025, when it was relocated offsite by the BM.
4/2/2025	0	0	0	None detected.
4/3/2025	0	0	0	None detected.
4/4/2025	0	0	0	None detected.
4/7/2025	1	1	0	CGS staff observed Rattlesnake #2, a juvenile, west of the ACC on the access road inside the perimeter fence (Appendix B). The rattlesnake was safely contained by CGS staff and held onsite until 4/9/2025, when it was relocated offsite by the BM.
4/9/2025	0	0	0	None detected.
4/14/2025	2	0	2	Rattlesnake #3 was found outside the fence, west of the ACC under a snake board. Rattlesnake #4 was discovered during the outside survey north of the Delevan Substation under a snake board.
4/16/2025	0	0	0	None detected.
4/21/2025	0	0	0	None detected.
4/23/2025	0	0	0	None detected.
4/28/2025	4	0	4	Rattlesnake #5 was found outside the fence north of the Delevan Substation under a snake board. Rattlesnake #6 was found near a culvert south of Noel Evan Road. Rattlesnakes #7 and #8 were both found on the edge of a riprap pile beneath vegetation during vegetation management.
4/29/2025	0	0	0	None detected.
4/30/2025	3	0	3	Rattlesnake #9 was found outside the fence south of the laydown yard. Rattlesnake #10 was found next to a traffic barrier near the GCID bridge. Rattlesnake #11 was found near a culvert east of the Delevan Substation.
5/7/2025	1	0	1	Rattlesnake #12 was found on the edge of a riprap pile beneath vegetation, north of the perimeter access road.
5/14/2025	2	0	2	Rattlesnakes #13 and #14 were found outside the fence northwest of the ACC by a pile of riprap. Both rattlesnakes were contained by CGS staff and later relocated by BM Sean O'Neil on 5/16/25.
5/21/2025	0	0	0	None detected.
5/28/2025	2	0	2	Rattlesnake #15 was found outside the fence, west of the ACC under a snake board, and rattlesnake #16 was found by the access gate to the irrigation canal on the way to relocate Rattlesnake #15.

Date	Total Daily Quantity	Inside Plant	Outside Plant	Notes
6/4/2025	0	0	0	None detected.
6/6/2025	1	1	0	Rattlesnake #17 was found beneath the CT#1 building entrance by night staff and was relocated by the BM (Appendix B, Photo 12).
6/9/2025	1	1	0	Rattlesnake #18 was found next to the control room in the northern entrance by night staff (Appendix B, Photo 13). The snake was relocated on 6/11/2025 by the BM.
6/11/2025	0	0	0	None detected.
6/18/2025	0	0	0	None detected.
6/25/2025	0	0	0	None detected.
7/2/2025	1	0	1	Rattlesnake #19 was under a snake board outside the fence, north of the ACC.
7/9/2025	0	0	0	None detected.
7/16/2025	0	0	0	None detected.
7/18/2025	1	1	0	Rattlesnake #20 was found by CGS staff inside the water treatment building under the floor grating by the eye washing station and was contained. It was relocated by the BM on 7/23/2025 (Appendix B, Photo 16).
7/23/2025	0	0	0	None detected.
7/30/2025	0	0	0	None detected.
8/6/2025	0	0	0	None detected.
8/13/2025	0	0	0	None detected.
8/20/2025	2	0	2	Rattlesnake #21, a deceased adult, was found outside the fence west of the ACC; and Rattlesnake #22 was found under a snake board north of the ACC outside the fence.
8/27/2025	0	0	0	None detected.
9/3/2025	0	0	0	None detected.
9/10/2025	1	0	1	Rattlesnake #23, a small juvenile, was found outside the fence under a board north of the ACC.
9/17/2025	0	0	0	None detected.
9/19/2025	0	0	0	None detected.
9/24/2025	0	0	0	None detected.
10/1/2025	0	0	0	None detected.
10/8/2025	0	0	0	None detected.
10/22/2025	0	0	0	None detected.

Date	Total Daily Quantity	Inside Plant	Outside Plant	Notes
10/24/2025	1	0	1	Rattlesnake # 24, a small juvenile, was found on 10/23/2025 outside the fence under a board north of the ACC. The snake was found and captured by CGS staff outside the fence south of the east entrance and relocated offsite by the BM on 10/24/2025.
10/29/2025	2	0	2	Rattlesnakes #25 and #26, both juveniles, were found outside the fence. Rattlesnake #25 was found beneath some fabric south of the warehouse, and Rattlesnake #26 was found under a traffic cone north of the main gate.
11/10/2025	1	1	0	CGS staff found Rattlesnake #27 west of the warehouse under an insulated pipe (Appendix B, Photo 18). The snake was contained by CGS staff and later released offsite by the BM.

5/28/2025	7	0	6	1	0	0	0	0	0	7	Five desiccated *Myotis* sp. bat carcasses and one desiccated Mexican free-tailed bat carcass were found under the ACC. One desiccated *Myotis* sp. bat was found next to the fence, west of the ACC.
6/4/2025	2	0	1	0	0	0	0	0	1	2	One desiccated *Myotis* sp. bat carcass and one partially intact unidentified bat carcass were found under the ACC.

Date	Number of Bat Carcasses Observed	Live Bats Captured and Released	Myotis (Little Brown Bat or Yuma Myotis)	Mexican Free-tailed Bat	Western Red Bat	Big Brown Bat	Hoary Bat	Pallid Bat	Unidentified	Daily Total (Dead and Living)	Notes
6/11/2025	3	0	3	0	0	0	0	0	0	3	Three desiccated *Myotis* sp. bat carcasses were found under the ACC.
6/18/2025	3	0	3	0	0	0	0	0	0	3	Three desiccated *Myotis* sp. bat carcasses were found under the ACC, and one desiccated Myotis sp. bat carcass was found west of the ACC next to the fence.
6/25/2025	1	0	1	0	0	0	0	0	0	1	One *Myotis* sp. bat carcass was found under the ACC.
7/2/2025	0	0	0	0	0	0	0	0	0	0	None detected.
7/9/2025	3	0	2	0	0	0	0	0	1	3	Two desiccated *Myotis* sp. bat carcasses and one partially intact unidentified carcass were found under the ACC.
7/16/2025	10	0	10	0	0	0	0	0	0	10	Five fresh and five desiccated *Myotis* sp. bat carcasses were found under the ACC.
7/23/2025	5	0	5	0	0	0	0	0	0	5	Four desiccated and one fresh *Myotis* sp. bat carcasses were found under the ACC.

Date	Number of Bat Carcasses Observed	Live Bats Captured and Released	Myotis (Little Brown Bat or Yuma Myotis)	Mexican Free-tailed Bat	Western Red Bat	Big Brown Bat	Hoary Bat	Pallid Bat	Unidentified	Daily Total (Dead and Living)	Notes
7/30/2025	9	1	9	0	0	0	0	0	0	10	Five fresh and four desiccated *Myotis* sp. bat carcasses were found under the ACC. One live *Myotis* sp. bat was found grounded under the ACC and later relocated offsite to an orchard after leaving the site (Appendix B, Photo 16).
8/6/2025	8	0	8	0	0	0	0	0	0	8	Three fresh and five desiccated *Myotis* sp. bat carcasses were found under the ACC.
8/13/2025	14	0	12	2	0	0	0	0	0	14	Two desiccated Mexican free-tailed bat carcasses, eleven desiccated *Myotis* sp. bat carcasses, and one fresh *Myotis* sp. bat carcass were found under the ACC.
8/20/2025	9	0	9	0	0	0	0	0	0	9	Seven desiccated *Myotis* sp. bat carcasses were found under the ACC, one desiccated Myotis sp. carcass was found by the western rollup door of the warehouse, and one desiccated *Myotis* sp. was found between the heat recovery steam generators.

Date	Number of Bat Carcasses Observed	Live Bats Captured and Released	Myotis (Little Brown Bat or Yuma Myotis)	Mexican Free-tailed Bat	Western Red Bat	Big Brown Bat	Hoary Bat	Pallid Bat	Unidentified	Daily Total (Dead and Living)	Notes
8/27/2025	16	0	13	2	0	0	0	0	1	16	Seven desiccated *Myotis* sp. bat carcasses, three fresh *Myotis* sp. bat carcasses, one fresh Mexican free-tailed bat carcass, one desiccated Mexican free-tailed bat carcass, and one partially intact unidentified bat carcass were found under the ACC. Three additional desiccated *Myotis* sp. bat carcasses were found west of the ACC next to the fence
9/3/2025	18	0	17	0	0	0	0	0	1	18	Sixteen desiccated Myotis sp., one fresh *Myotis* sp., and one partially intact unidentified bat carcass were found under the ACC.
9/10/2025	5	0	5	0	0	0	0	0	0	5	Five desiccated *Myotis* sp. bat carcasses were found under the ACC.
9/17/2025	4	0	4	0	0	0	0	0	0	4	Three desiccated and one fresh *Myotis* sp. bat carcasses were found under the ACC.

Date	Number of Bat Carcasses Observed	Live Bats Captured and Released	Myotis (Little Brown Bat or Yuma Myotis)	Mexican Free-tailed Bat	Western Red Bat	Big Brown Bat	Hoary Bat	Pallid Bat	Unidentified	Daily Total (Dead and Living)	Notes
9/19/2025	0	1	0	0	0	0	0	0	0	1	One live *Myotis* sp. bat was found by biologist Ryan Bynes (Swaim Biological) in Street #4, Fan Room 2 while checking the bat monitoring equipment. The bat was captured and given some water and released east of the CGS on a eucalyptus tree. The bat flew off to the west back toward the CGS and out of sight.
9/24/2025	3	0	3	0	0	0	0	0	0	3	Three desiccated *Myotis* sp. bat carcasses were found under the ACC.
10/1/2025	2	0	2	0	0	0	0	0	0	2	Two desiccated *Myotis* sp. bat carcasses were found under the ACC.
10/8/2025	4	0	4	0	0	0	0	0	0	4	Three desiccated and one fresh *Myotis* sp. bat carcasses were found under the ACC.
10/22/2025	2	0	1	0	0	0	0	0	1	2	One partially intact unidentified bat carcass and one desiccated *Myotis* sp. bat carcass were found under the ACC.

Pacific Gas and Electric Company®

Appendix 3, Noise

Per Noise-8, the following is required: "In the first annual compliance report after the receipt of a complaint, the project owner shall include documentation certifying that:

1) the noise-attenuating upgrades were installed on the specified residence at the project owner's expense;

2) the noise attenuating upgrades were already a feature of the residence;

3) installation was offered but refused by the owner; or 4) residential use by the complainant was ceased.

There were no Noise Complaints made by the owners or occupants of any of the existing residences located at ML1, ML2, or RC1 during operation of the CGS in 2025. There have been no noise complaints to date from anyone.

Pacific Gas and Electric Company®

Appendix 4, SOIL & WATER-2

2024-2025

ANNUAL REPORT

FOR STORM WATER DISCHARGES
ASSOCIATED WITH INDUSTRIAL ACTIVITIES

Reporting Period July 1, 2024 through June 30, 2025

Retain a copy of the completed Annual Report for your records.

Please remember that a Notice of Termination and new Notice of Intent are required whenever a facility operation is relocated or changes ownership.

If you have any questions, please contact your Regional Board Industrial Storm Water Permit Contact. The names, telephone numbers, and e-mail addresses of the Regional Board contacts, as well was the Regional Board office addresses, can be found at:
http://www.waterboards.ca.gov/water_issues/programs/stormwater/contact.shtml

General Information

A. Facility Information

WDID: 5S06I022929

Business Name: Colusa Generating Station

Physical Address: 4780 Dirks Rd

City: Maxwell

State: CA

Zip: 95955

Contact Person: Joshua Harris

Phone: 530-934-9086

Email: joshua.harris@pge.com

Standard Industrial Classification (SIC) Codes: 4911-Electric Services

B. Facility Owner Information

Business Name: Pacific Gas Electric Co

Mailing Address: PO Box 398

City: Maxwell

State: CA

Zip: 95955

Contact Person: Joshua Harris

Phone: 530-934-9086

Email: joshua.harris@pge.com

C. Facility Billing Information

Business Name: Pacific Gas Electric Co

Mailing Address: PO Box 398

City: Maxwell

State: CA

Zip: 95955

Contact Person: Joshua Harris

Phone: 530-934-9086

Email: joshua.harris@pge.com

Question Information

1. Has the Discharger conducted monthly visual observations (including authorized and unauthorized Non-Storm Water Discharges and Best Management Practices) in accordance with Section XI.A.1?

☒ Yes ☐ No

If No, see Attachment 1, Summary of Explanation.

2. Has the Discharger conducted sampling event visual observations at each discharge location where a sample was obtained in accordance with Section XI.A.2?

☒ Yes ☐ No

If No, see Attachment 1, Summary of Explanation.

3. Did you sample the required number of Qualifying Storm Events during the reporting year for all discharge locations, in accordance with Section XI.B?

☒ Yes ☐ No

If No, see Attachment 1, Summary of Explanation.

4. How many storm water discharge locations are at your facility?

1

5. Has the Discharger chosen to select Alternative Discharge Locations in accordance with Section XI.C.3?

☐ Yes ☒ No

6. Has the Discharger reduced the number of sampling locations within a drainage area in accordance with the Representative Sampling Reduction in Section XI.C.4?

☐ Yes ☒ No

6.1. Has the Discharger reduced the frequency of sampling at the facility area in accordance with the Sample Frequency Reduction in Section XI.C.7?

☐ Yes ☒ No

7. Permitted facilities located within an impaired watershed must assess for potential pollutants that may be present in the facility's industrial storm water discharge. Using the table below, populated based on the facility's location, indicate the presence of the potential pollutant at the facility.

The facility is not located within an impaired HUC 10 watershed. You are not required to select any Industrial Pollutants. Skip Questions 8 and 9.

8. Has the Discharger included the above pollutants in the SWPPP pollutant source assessment and assessed the need for analytical monitoring for the pollutants?

☒ Yes ☐ No

If No, what date will the parameter(s) will be added to the SWPPP and Monitoring Implementation Plan?

9. Were all samples collected in accordance with Section XI.B.5?

☒ Yes ☐ No

If No, see Attachment 1, Summary of Explanation.

10. Has any contained storm water been discharged from the facility this reporting year?

☐ Yes ☒ No

If Yes, see Attachment 1, Summary of Explanation.

11. Has the Discharger conducted one (1) annual evaluation during the reporting year as required in Section XV?

☒ Yes ☐ No

If Yes, what date was the annual evaluation conducted? 06/18/2025

If No, see Attachment 1, Summary of Explanation.

12. Has the Discharger maintained records on-site for the reporting year in accordance with XXI.J.3?

☒ Yes ☐ No

If No, see Attachment 1, Summary of Explanation.

If your facility is subject to Effluent Limitation Guidelines in Attachment F of the Industrial General Permit, include your specific requirements as an attachment to the Annual Report (attach as file type: Supporting Documentation).

ANNUAL REPORT CERTIFICATION

I certify under penalty of law that this document and all attachments were prepared under the direction or supervision in accordance with a system designed to assure that qualified personnel propoerly gether and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Laboratory Report

Introduction: This report package contains a total of 5 pages divided into 3 sections:

Case Narrative	(1 page)	: An overview of the work performed at FGL.
Sample Results	(2 pages)	: Results for each sample submitted.
Quality Control	(2 pages)	: Supporting Quality Control (QC) results.

Case Narrative

This Case Narrative pertains to the following samples:

Sample Description	Date Sampled	Date Received	FGL Lab No.	Matrix
Stormwater Discharge Point	11/21/2024	11/22/2024	CH 2490833-001	STM

Sampling and Receipt Information:

The Sample was received in acceptable condition and within temperature requirements, unless noted on the Condition Upon Receipt (CUR) form. The Sample was received, prepared and analyzed within the method specified holding times. All samples arrived on ice. All samples were checked for pH if acid or base preservation is required (except for VOAs). For details of sample receipt information, please see the associated Chain of Custody and Condition Upon Receipt Form.

Quality Control: All samples were prepared and analyzed according to established quality control criteria. Any exceptions are noted in the Quality Control Section of this report.

Test Summary	
EPA 1664A	Preparation and analysis performed by FGL-Santa Paula (FGL-SP ELAP# 1573)
EPA 200.7	Preparation and analysis performed by FGL-Santa Paula (FGL-SP ELAP# 1573)
SM 2540 D	Preparation and analysis performed by FGL-Santa Paula (FGL-SP ELAP# 1573)

Certification: I certify that this data package is in compliance with ELAP standards, both technically and for completeness, except for any conditions listed above and in the QC Section. Release of the data contained in this data package is authorized by the Laboratory Director or his designee, as verified by the following electronic signature. This report shall not be reproduced except in full, without the written approval of the laboratory.

			MSRPD	mg/L		3.9%	≤20	

Definition

Blank : Method Blank - Prepared to verify that the preparation process is not contributing contamination to the samples.

DQO : Data Quality Objective - This is the criteria against which the quality control data is compared.

LCS : Laboratory Control Standard/Sample - Prepared to verify that the preparation process is not affecting analyte recovery.

MS : Matrix Spikes - A random sample is spiked with a known amount of analyte. The recoveries are an indication of how that sample matrix affects analyte recovery.

MSD : Matrix Spike Duplicate of MS/MSD pair - A random sample duplicate is spiked with a known amount of analyted. The recoveries are an indication of how that sample matrix affects analyte recovery.

MSRPD : MS/MSD Relative Percent Difference (RPD) - The MS relative percent difference is an indication of precision for the preparation and analysis.

ND : Non-detect - Result was below the DQO listed for the analyte.

Definition

Blank	:	Method Blank - Prepared to verify that the preparation process is not contributing contamination to the samples.
BS	:	Blank Spikes - A blank is spiked with a known amount of analyte. It is prepared to verify that the preparation process is not affecting analyte recovery.
BSD	:	Blank Spike Duplicate of BS/BSD pair - A blank duplicate is spiked with a known amount of analyte. It is prepared to verify that the preparation process is not affecting analyte recovery.
BSRPD	:	BS/BSD Relative Percent Difference (RPD) - The BS relative percent difference is an indication of precision for the preparation and analysis.
Dup	:	Duplicate Sample - A random sample with each batch is prepared and analyzed in duplicate. The relative percent difference is an indication of precision for the preparation and analysis.
LCS	:	Laboratory Control Standard/Sample - Prepared to verify that the preparation process is not affecting analyte recovery.

1. Number of ice chests/packages received: 07C Shipping tracking #(s):_____
2. Temp IR Gun ID #: 2chio
3. Were samples received on ice? (Yes) No Temps: 8.1 °C / _____ / _____ / _____ / _____
   Surface water SWTR bact samples: A sample that has a temperature upon receipt of >10° C, whether iced or not, should be flagged unless the time since sample collection has been less than two hours.
4. Do the number of bottles received agree with the COC? (Yes) No N/A
5. Were samples received intact? (i.e. no broken bottles, leaks etc.) (Yes) No
6. VOAs checked for Headspace? Yes No (N/A)
7. Were all analyses within holding times at time of receipt? (Yes) No
8. Verify sample date, time and sampler name (Yes) No

Sign and date the COC, place in a ziplock and put in the same ice chest as the samples.
Sample Receipt Review completed by (initials): KDO

Sample Receipt at SP:

1. Number of ice chests/packages received: 3 Shipping tracking #(s): 576834330, 576834334 576834335
2. Temp IR Gun ID #: 7111
3. Were samples received on ice? (Yes) No Temps: 1 / 1 / 0.1 / (not frozen)
   Acceptable is above freezing to 6°C. If many packages are received at one time check for tests/H.T.'s/rushes/
4. Do the number of bottles received agree with the COC? (Yes) No N/A
5. Were samples received intact? (i.e. no broken bottles, leaks etc.) (Yes) No

Sign and date the COC, obtain LIMS sample numbers, select methods/tests and print labels.

Sample Verification, Labeling and Distribution:

1. Were all requested analyses understood and acceptable? Yes (No)
2. Did bottle labels correspond with the client's ID's? (Yes) No
3. Were all bottles requiring sample preservation properly preserved? (Yes) No N/A FGL
   [Exception: Oil & Grease, VOA and CrVI verified in lab]
4. VOAs checked for Headspace? Yes No (N/A)
5. Have rush or project due dates been checked and accepted? (Yes) No (N/A)
6. Were all analyses within holding times at time of receipt? (Yes) No

Attach labels to the containers and include a copy of the COC for lab delivery.
Sample Receipt, Login and Verification completed by (initials): KW

Laboratory Report

Introduction: This report package contains a total of 5 pages divided into 3 sections:

Case Narrative	(1 page)	: An overview of the work performed at FGL.
Sample Results	(2 pages)	: Results for each sample submitted.
Quality Control	(2 pages)	: Supporting Quality Control (QC) results.

Case Narrative

This Case Narrative pertains to the following samples:

Sample Description	Date Sampled	Date Received	FGL Lab No.	Matrix
Stormwater Discharge Point	12/14/2024	12/16/2024	CH 2491430-001	STM

Sampling and Receipt Information:

The Sample was received in acceptable condition and within temperature requirements, unless noted on the Condition Upon Receipt (CUR) form. The Sample was received, prepared and analyzed within the method specified holding times. All samples arrived on ice. All samples were checked for pH if acid or base preservation is required (except for VOAs). For details of sample receipt information, please see the associated Chain of Custody and Condition Upon Receipt Form.

Quality Control: All samples were prepared and analyzed according to established quality control criteria. Any exceptions are noted in the Quality Control Section of this report.

Test Summary	
EPA 1664A	Preparation and analysis performed by FGL-Santa Paula (FGL-SP ELAP# 1573)
EPA 200.7	Preparation and analysis performed by FGL-Santa Paula (FGL-SP ELAP# 1573)
SM 2540 D	Preparation and analysis performed by FGL-Santa Paula (FGL-SP ELAP# 1573)

Certification: I certify that this data package is in compliance with ELAP standards, both technically and for completeness, except for any conditions listed above and in the QC Section. Release of the data contained in this data package is authorized by the Laboratory Director or his designee, as verified by the following electronic signature. This report shall not be reproduced except in full, without the written approval of the laboratory.

KD: MKH

Definition

Blank : Method Blank - Prepared to verify that the preparation process is not contributing contamination to the samples.

DQO : Data Quality Objective - This is the criteria against which the quality control data is compared.

LCS : Laboratory Control Standard/Sample - Prepared to verify that the preparation process is not affecting analyte recovery.

MS : Matrix Spikes - A random sample is spiked with a known amount of analyte. The recoveries are an indication of how that sample matrix affects analyte recovery.

MSD : Matrix Spike Duplicate of MS/MSD pair - A random sample duplicate is spiked with a known amount of analyted. The recoveries are an indication of how that sample matrix affects analyte recovery.

MSRPD : MS/MSD Relative Percent Difference (RPD) - The MS relative percent difference is an indication of precision for the preparation and analysis.

ND : Non-detect - Result was below the DQO listed for the analyte.

Definition

Blank : Method Blank - Prepared to verify that the preparation process is not contributing contamination to the samples.

BS : Blank Spikes - A blank is spiked with a known amount of analyte. It is prepared to verify that the preparation process is not affecting analyte recovery.

BSD : Blank Spike Duplicate of BS/BSD pair - A blank duplicate is spiked with a known amount of analyte. It is prepared to verify that the preparation process is not affecting analyte recovery.

BSRPD : BS/BSD Relative Percent Difference (RPD) - The BS relative percent difference is an indication of precision for the preparation and analysis.

Dup : Duplicate Sample - A random sample with each batch is prepared and analyzed in duplicate. The relative percent difference is an indication of precision for the preparation and analysis.

LCS : Laboratory Control Standard/Sample - Prepared to verify that the preparation process is not affecting analyte recovery.

Laboratory Report

Introduction: This report package contains a total of 5 pages divided into 3 sections:

Case Narrative	(1 page)	: An overview of the work performed at FGL.
Sample Results	(2 pages)	: Results for each sample submitted.
Quality Control	(2 pages)	: Supporting Quality Control (QC) results.

Case Narrative

This Case Narrative pertains to the following samples:

Sample Description	Date Sampled	Date Received	FGL Lab No.	Matrix
Stormwater Discharge Point	12/24/2024	12/24/2024	CH 2491689-001	STM

Sampling and Receipt Information:

The Sample was received in acceptable condition and within temperature requirements, unless noted on the Condition Upon Receipt (CUR) form. The Sample was received, prepared and analyzed within the method specified holding times. All samples arrived on ice. All samples were checked for pH if acid or base preservation is required (except for VOAs). For details of sample receipt information, please see the associated Chain of Custody and Condition Upon Receipt Form.

Quality Control: All samples were prepared and analyzed according to established quality control criteria. Any exceptions are noted in the Quality Control Section of this report.

Test Summary	
EPA 1664A	Preparation and analysis performed by FGL-Santa Paula (FGL-SP ELAP# 1573)
EPA 200.7	Preparation and analysis performed by FGL-Santa Paula (FGL-SP ELAP# 1573)
SM 2540 D	Preparation and analysis performed by FGL-Santa Paula (FGL-SP ELAP# 1573)

Certification: I certify that this data package is in compliance with ELAP standards, both technically and for completeness, except for any conditions listed above and in the QC Section. Release of the data contained in this data package is authorized by the Laboratory Director or his designee, as verified by the following electronic signature. This report shall not be reproduced except in full, without the written approval of the laboratory.

			MSRPD	mg/L		3.7%	≤20	
			MS	mg/L	4.000	191%	75-125	435
		(STK2457465-001)	MSD	mg/L	4.000	192%	75-125	435
			MSRPD	mg/L		0.7%	≤20	

Definition

Blank : Method Blank - Prepared to verify that the preparation process is not contributing contamination to the samples.
DQO : Data Quality Objective - This is the criteria against which the quality control data is compared.
LCS : Laboratory Control Standard/Sample - Prepared to verify that the preparation process is not affecting analyte recovery.
MS : Matrix Spikes - A random sample is spiked with a known amount of analyte. The recoveries are an indication of how that sample matrix affects analyte recovery.
MSD : Matrix Spike Duplicate of MS/MSD pair - A random sample duplicate is spiked with a known amount of analyted. The recoveries are an indication of how that sample matrix affects analyte recovery.
MSRPD : MS/MSD Relative Percent Difference (RPD) - The MS relative percent difference is an indication of precision for the preparation and analysis.
ND : Non-detect - Result was below the DQO listed for the analyte.

Explanation

435 : Sample matrix may be affecting this analyte. Data was accepted based on the LCS or CCV recovery.

Inter-Laboratory Condition Upon Receipt (Attach to COC)Sample Receipt at:
CC (CH) STK VI

1. Number of ice chests/packages received: OTC Shipping tracking #(s):_____

2. Temp IR Gun ID #: 2chio
3. Were samples received on ice? (Yes) No Temps: 14.1°C / ____ / ____ / ____ / ____
   Surface water SWTR bact samples: A sample that has a temperature upon receipt of >10° C, whether iced or not, should be flagged unless the time since sample collection has been less than two hours.

4.	Do the number of bottles received agree with the COC?	(Yes)	No	N/A
5.	Were samples received intact? (i.e. no broken bottles, leaks etc.)	(Yes)	No	
6.	VOAs checked for Headspace?	Yes	No	(N/A)
7.	Were all analyses within holding times at time of receipt?	(Yes)	No	
8.	Verify sample date, time and sampler name	(Yes)	No	

Sign and date the COC, place in a ziplock and put in the same ice chest as the samples.
Sample Receipt Review completed by (initials): WO

Sample Receipt at SP:

1. Number of ice chests/packages received: 1 Shipping tracking #(s): 570442185

2. Temp IR Gun ID #: TH109
3. Were samples received on ice? (Yes) No Temps: 1°C / ____ / ____ / ____ / ____
   Acceptable is above freezing to 6°C. If many packages are received at one time check for tests/H.T.'s/rushes/

4.	Do the number of bottles received agree with the COC?	(Yes)	No	N/A
5.	Were samples received intact? (i.e. no broken bottles, leaks etc.)	(Yes)	No	

Sign and date the COC, obtain LIMS sample numbers, select methods/tests and print labels.

Sample Verification, Labeling and Distribution:

1.	Were all requested analyses understood and acceptable?	(Yes)	No		
2.	Did bottle labels correspond with the client's ID's?	(Yes)	No		
3.	Were all bottles requiring sample preservation properly preserved? [Exception: Oil & Grease, VOA and CrVI verified in lab]	(Yes)	No	N/A	FGL
4.	VOAs checked for Headspace?	Yes	No	(N/A)	
5.	Have rush or project due dates been checked and accepted?	Yes	No	(N/A)	
6.	Were all analyses within holding times at time of receipt?	(Yes)	No		

Attach labels to the containers and include a copy of the COC for lab delivery.
Sample Receipt, Login and Verification completed by (initials): JKW

Laboratory Report

Introduction: This report package contains a total of 5 pages divided into 3 sections:

Case Narrative	(1 page)	: An overview of the work performed at FGL.
Sample Results	(2 pages)	: Results for each sample submitted.
Quality Control	(2 pages)	: Supporting Quality Control (QC) results.

Case Narrative

This Case Narrative pertains to the following samples:

Sample Description	Date Sampled	Date Received	FGL Lab No.	Matrix
Stormwater Discharge Point	02/04/2025	02/06/2025	CH 2571065-001	STM

Sampling and Receipt Information:

The Sample was received in acceptable condition and within temperature requirements, unless noted on the Condition Upon Receipt (CUR) form. The Sample was received, prepared and analyzed within the method specified holding times. All samples arrived on ice. All samples were checked for pH if acid or base preservation is required (except for VOAs). For details of sample receipt information, please see the associated Chain of Custody and Condition Upon Receipt Form.

Quality Control: All samples were prepared and analyzed according to established quality control criteria. Any exceptions are noted in the Quality Control Section of this report.

Definition

Blank : Method Blank - Prepared to verify that the preparation process is not contributing contamination to the samples.

DQO : Data Quality Objective - This is the criteria against which the quality control data is compared.

LCS : Laboratory Control Standard/Sample - Prepared to verify that the preparation process is not affecting analyte recovery.

MS : Matrix Spikes - A random sample is spiked with a known amount of analyte. The recoveries are an indication of how that sample matrix affects analyte recovery.

MSD : Matrix Spike Duplicate of MS/MSD pair - A random sample duplicate is spiked with a known amount of analyted. The recoveries are an indication of how that sample matrix affects analyte recovery.

MSRPD : MS/MSD Relative Percent Difference (RPD) - The MS relative percent difference is an indication of precision for the preparation and analysis.

ND : Non-detect - Result was below the DQO listed for the analyte.

Definition

Blank : Method Blank - Prepared to verify that the preparation process is not contributing contamination to the samples.

BS : Blank Spikes - A blank is spiked with a known amount of analyte. It is prepared to verify that the preparation process is not affecting analyte recovery.

BSD : Blank Spike Duplicate of BS/BSD pair - A blank duplicate is spiked with a known amount of analyte. It is prepared to verify that the preparation process is not affecting analyte recovery.

BSRPD : BS/BSD Relative Percent Difference (RPD) - The BS relative percent difference is an indication of precision for the preparation and analysis.

Dup : Duplicate Sample - A random sample with each batch is prepared and analyzed in duplicate. The relative percent difference is an indication of precision for the preparation and analysis.

LCS : Laboratory Control Standard/Sample - Prepared to verify that the preparation process is not affecting analyte recovery.

Explanation

440 : Sample nonhomogeneity may be affecting this analyte. Data was accepted based on the LCS or CCV recovery.

Inter-Laboratory Condition Upon Receipt (Attach to COC)Sample Receipt at:
CC (CH) STK VI

1. Number of ice chests/packages received: 07C Shipping tracking #(s):_____
2. Temp IR Gun ID #: 2clw10
3. Were samples received on ice? (Yes) No Temps: 8.3°F ____ / ____ / ____ / ____
   Surface water SWTR bact samples: A sample that has a temperature upon receipt of >10° C, whether iced or not, should be flagged unless the time since sample collection has been less than two hours.

4. Do the number of bottles received agree with the COC?	(Yes)	No	N/A	
5. Were samples received intact? (i.e. no broken bottles, leaks etc.)	(Yes)	No		
6. VOAs checked for Headspace?	Yes	No	(N/A)	
7. Were all analyses within holding times at time of receipt?	(Yes)	No		
8. Verify sample date, time and sampler name	(Yes)	No		

Sign and date the COC, place in a ziplock and put in the same ice chest as the samples.
Sample Receipt Review completed by (initials): MD

5426102099
5426101999

Sample Receipt at SP:

1. Number of ice chests/packages received: 4 Shipping tracking #(s): 5426102134
   5426152144
2. Temp IR Gun ID #: TH201
3. Were samples received on ice? (Yes) No Temps: 1.4c / 1.5c / 0.9c / 1.2c / ____
   Acceptable is above freezing to 6°C. If many packages are received at one time check for tests/H.T.'s/rushes/

4. Do the number of bottles received agree with the COC?	(Yes)	No	N/A
5. Were samples received intact? (i.e. no broken bottles, leaks etc.)	(Yes)	No	

Sign and date the COC, obtain LIMS sample numbers, select methods/tests and print labels.

Sample Verification, Labeling and Distribution:

1. Were all requested analyses understood and acceptable?	(Yes)	No		
2. Did bottle labels correspond with the client's ID's?	(Yes)	No		
3. Were all bottles requiring sample preservation properly preserved? [Exception: Oil & Grease, VOA and CrVI verified in lab]	(Yes)	No	N/A	FGL
4. VOAs checked for Headspace?	Yes	No	(N/A)	
5. Have rush or project due dates been checked and accepted?	Yes	No	(N/A)	
6. Were all analyses within holding times at time of receipt?	(Yes)	No		

Attach labels to the containers and include a copy of the COC for lab delivery.
Sample Receipt, Login and Verification completed by (initials): JAW

Laboratory Report

Introduction: This report package contains a total of 5 pages divided into 3 sections:

Case Narrative	(1 page)	: An overview of the work performed at FGL.
Sample Results	(2 pages)	: Results for each sample submitted.
Quality Control	(2 pages)	: Supporting Quality Control (QC) results.

Case Narrative

This Case Narrative pertains to the following samples:

Sample Description	Date Sampled	Date Received	FGL Lab No.	Matrix
Stormwater Discharge Point	02/13/2025	02/13/2025	CH 2571298-001	STM

Sampling and Receipt Information:

The Sample was received in acceptable condition and within temperature requirements, unless noted on the Condition Upon Receipt (CUR) form. The Sample was received, prepared and analyzed within the method specified holding times. All samples arrived on ice. All samples were checked for pH if acid or base preservation is required (except for VOAs). For details of sample receipt information, please see the associated Chain of Custody and Condition Upon Receipt Form.

Quality Control: All samples were prepared and analyzed according to established quality control criteria. Any exceptions are noted in the Quality Control Section of this report.

Test Summary	
EPA 1664A	Preparation and analysis performed by FGL-Santa Paula (FGL-SP ELAP# 1573)
EPA 200.7	Preparation and analysis performed by FGL-Santa Paula (FGL-SP ELAP# 1573)
SM 2540 D	Preparation and analysis performed by FGL-Santa Paula (FGL-SP ELAP# 1573)

Certification: I certify that this data package is in compliance with ELAP standards, both technically and for completeness, except for any conditions listed above and in the QC Section. Release of the data contained in this data package is authorized by the Laboratory Director or his designee, as verified by the following electronic signature. This report shall not be reproduced except in full, without the written approval of the laboratory.

KD: RDM

Inter-Laboratory Condition Upon Receipt (Attach to COC)Sample Receipt at:
CC (CH) STK VI

1. Number of ice chests/packages received: 01C Shipping tracking #(s):_____
2. Temp IR Gun ID #: Thio
3. Were samples received on ice? (Yes) No Temps: 10.7°C / ____ / ____ / ____ / ____
   Surface water SWTR bact samples: A sample that has a temperature upon receipt of >10° C, whether iced or not, should be flagged unless the time since sample collection has been less than two hours.

4.	Do the number of bottles received agree with the COC?	(Yes)	No	N/A
5.	Were samples received intact? (i.e. no broken bottles, leaks etc.)	(Yes)	No	
6.	VOAs checked for Headspace?	Yes	No	(N/A)
7.	Were all analyses within holding times at time of receipt?	(Yes)	No	
8.	Verify sample date, time and sampler name	(Yes)	No	

Sign and date the COC, place in a ziplock and put in the same ice chest as the samples.
Sample Receipt Review completed by (initials): KDL

Sample Receipt at SP:

1. Number of ice chests/packages received: 2 Shipping tracking #(s): 562629571 / 566
2. Temp IR Gun ID #: THU8
3. Were samples received on ice? (Yes) No Temps: 1.1 / ____ / ____ / ____ / ____
   Acceptable is above freezing to 6°C. If many packages are received at one time check for tests/H.T.'s/rushes/

4.	Do the number of bottles received agree with the COC?	(Yes)	No	N/A
5.	Were samples received intact? (i.e. no broken bottles, leaks etc.)	(Yes)	No	

Sign and date the COC, obtain LIMS sample numbers, select methods/tests and print labels.

Sample Verification, Labeling and Distribution:

1.	Were all requested analyses understood and acceptable?	(Yes)	No		
2.	Did bottle labels correspond with the client's ID's?	(Yes)	No		
3.	Were all bottles requiring sample preservation properly preserved? [Exception: Oil & Grease, VOA and CrVI verified in lab]	(Yes)	No	N/A	FGL
4.	VOAs checked for Headspace?	Yes	No	(N/A)	
5.	Have rush or project due dates been checked and accepted?	Yes	No	(N/A)	
6.	Were all analyses within holding times at time of receipt?	(Yes)	No		

Attach labels to the containers and include a copy of the COC for lab delivery.
Sample Receipt, Login and Verification completed by (initials): MC

Discrepancy Documentation:
Any items above which are "No" or do not meet specifications (i.e. temps) must be resolved.

Calibration of Hydrogen Ion Activity (pH)

Instrument

Make/Model ULTRAMETER II

Serial # 6230367

Standards: Specify the types of standards used for calibration, the origin of the standards, the value and expiration of the standards, and the date the standards were opened.

	pH	Brand	Expiration Date	Type	Date Opened
Standard A	4.00	HACH	10/26	A	
Standard B	7.00	HACH	11/26	B	
Standard C	10.00	HACH	11/25	C	

Date	Time	Standard (A,B,C)	Standard Value	Instrument Response	Calibrated (Yes / No)	Temp of Standard (F)	Sampler Initials	Comments
2/13	1040	A	4	3.99	YES	53		
2/13	1040	B	7	7.02	YES	53		
2/13	1040	C	10	10.02	YES	53		

Field Measurement of Hydrogen Ion Activity (pH)

Instrument

Make/Model # MYRON ULTRAMETER II

Serial # 6230367

Calibration: *Ensure the instrument has been calibrated before sample analysis proceeds.*

Sample ID	Sample Date	Sample Time (hr:min)	Analysis Date	Analysis within 15 min of sample? Yes, No	Instrument Response	Temp (°C)	Sampler Initials	Comments

Pacific Gas and Electric Company®

Appendix 5, SOIL & WATER-7

Per Soil & Water 7 the following is required:" the project owner shall submit any related monitoring required by the agreement to the CPM in the annual compliance report. The project owner shall submit any notice if violations from the Glenn Colusa Irrigation District to the CPM within 10 days of receipt and fully explain the corrective actions taken in the next annual compliance report."

There is no reporting or monitoring requirement in the water agreement with the Glenn Colusa Irrigation District.

No notice of violations issued by GCID in the 2025 year.

Pacific Gas and Electric Company®

Appendix 6, SOIL & WATER-8

Pacific Gas and Electric Company®

Appendix 6, SOIL & WATER-8

All water used during 2025 was supplied by the Glenn Colusa Irrigation District. The total amount of water used during 2025 was 22,776,768 gallons.

Pacific Gas and Electric Company®

Appendix 7, SOIL & WATER-9

Per Soil &Water 9, in regard to the Septic System, the following is required: "Any testing results or correspondence exchanged between the project owner and the California Department of Health Services or the Colusa County Environmental Health Division."

There is no testing required for the Septic System at the Colusa Generating Station and there was no formal correspondence with the Colusa County Department of Environmental Health. In 2012 we signed a maintenance contract with Hydrotec Solutions Inc., to provide quarterly maintenance of our septic system in accordance with our O&M manual. This company was recommended to us by the Colusa County Department of Environmental Health. They began their quarterly maintenance in the third quarter of 2012 and have continued thought the present.

Attached is their 2025 report.

Pacific Gas and Electric Company®

Appendix 8, TLSN-3

Per TLSN-3, the following is required: "Any reports of line-related complaints shall be summarized along with related mitigation measures for the first five years and provided in an annual report to the CPM."

There were no line related complaints in 2025.

Pacific Gas and Electric Company®

Appendix 9, VIS-1

Per VIS-1, the following is required: "The project owner shall provide a status report regarding surface treatment maintenance in the Annual Compliance Report. The report shall specify:
a) the condition of the surfaces of all structures and buildings at the end of the reporting year; b) major maintenance activities that occurred during the reporting year; and
c) the schedule of major maintenance activities for the next year.

Surface coating applications for the most part remain in good condition after their completion in March 2011, as a result no maintenance activities occurred in 2025.

Pacific Gas and Electric Company®

Appendix 10, VIS-3

Per VIS-3, the following is required: The project owner shall report landscaping maintenance activities, including of dead or dying vegetation, for the previous year of operation in each annual compliance report."

During 2025 maintenance was completed by Sierra Integrated Services Inc. The replaced trees did not take and will be removed and replaced in 2026.

February 18, 2025

First Quarter 2025 Landscape Tree & Shrub Maintenance Report

An inspection was performed on the landscape trees and shrubs bordering the entrance of the facility. The trees were visually inspected for signs of structural issues, moisture/irrigation issues, and pest and diseases. Based on the observations most trees and shrubs did not appear to have any of the above listed issues. All of the small re-plantings of eucalyptus that have died need to be removed and re-planted.

<u>Recommendations</u>

Continue to inspect and test irrigation system to ensure it is properly working and adequately supplying water to each tree. The irrigation system should be off during this quarter due to adequate rainfall.

Continue to maintain a weed free zone around each tree and shrub. Weeds can compete for nutrients and moisture and can create harborage and protection for rodents that can damage the tree bark. Application of a pre-emergent herbicide will assist in this effort.

May 7, 2025

Second Quarter 2025 Landscape Tree & Shrub Maintenance Report

An inspection was performed on the landscape trees and shrubs bordering the entrance of the facility. The trees were visually inspected for signs of structural issues, moisture/irrigation issues, and pest and diseases. Based on the observations most trees and shrubs did not appear to have any of the above listed issues. Inspected irrigation, staking, and removed weedy vegetation near plantings.

All the other trees are maintaining as expected and have good new spring growth. The weedy vegetation surrounding the base of all trees has been line trimmed away.

Recommendations

Continue to inspect and test irrigation system to ensure it is properly working and adequately supplying water to each tree. The irrigation system should be supplying adequate irrigation to the trees at this point in the year.

Continue to maintain a weed free zone around each tree and shrub. Weeds can compete for nutrients and moisture and can create harborage and protection for rodents that can damage the tree bark.

The four small eucalyptus that were planted within the last year need to be removed and re-planted. It is imperative that the irrigation is working properly and consistently on these new plantings.

SIERRA
INTEGRATED SERVICES INC.

August 12, 2025

Third Quarter 2025 Landscape Tree & Shrub Maintenance Report

An inspection was performed on the landscape trees and shrubs bordering the entrance of the facility. The trees were visually inspected for signs of structural issues, moisture/irrigation issues, and pest and diseases. Based on the observations most of the mature trees and shrubs did not appear to have any of the above listed issues.

Recommendations

Continue to inspect and test irrigation system to ensure it is properly working and adequately supplying water to each tree. It appears that the irrigation system may not have been providing enough/any water to the immature trees at some point and that lead to their death.

Continue to maintain a weed free zone around each tree and shrub. Weeds can compete for nutrients and moisture and can create harborage and protection for rodents that can damage the tree bark. Most of the weedy vegetation is cut and dead at this point but new growth around irrigation lines needs to be addressed.

All mature trees have continued stable status.

December 18, 2025

Fourth Quarter 2025 Landscape Tree & Shrub Maintenance Report

An inspection was performed on the landscape trees and shrubs bordering the entrance of the facility. The trees were visually inspected for signs of structural issues, moisture/irrigation issues, and pest and diseases. Based on the observations most trees and shrubs did not appear to have any of the above listed issues.

Recommendations

Continue to inspect and test irrigation system to ensure it is properly working and adequately supplying water to each tree. The irrigation system will need to be turned off during the rainy season.

New trees will need to be planted in the spring of 2026 and the irrigation tested to ensure that it is providing water frequently and in sufficient amounts to sustain the trees. The irrigation system seems to be working but perhaps was not providing sufficient water during the peak summer season.

Continue to maintain a weed free zone around each tree. Weeds can compete for nutrients and moisture and can create harborage and protection for rodents that can damage the tree bark. Pre-emergent herbicides should be applied in January/February and then line trimming in the early summer to ensure a weed free zone around the trees.

Appendix 11, Waste-5

The Waste Management Plan was followed during 2025. The following pages reflect the practices that were utilized throughout the year.

TABLE 2-1
Characterization of Waste Streams at the Colusa Generating Station
Waste Management Plan, PG&E Colusa Generating Station

Waste Stream	Characteristics	Classification	Disposal	Analysis Required
General Wastes				
Non-recyclable non-hazardous office and lunchroom waste	Waste paper, metal, plastic, cardboard, wood	Non-hazardous solid waste, based on waste management practices and staff training.	Commercial waste bins	Not required
Recyclable office materials	Waste paper, metal, plastic, cardboard	Not a waste, based on waste management practices and staff training.	Commercial recycling bins	Not required
Janitorial products and waste from their use	Janitorial products (e.g., window cleaner, floor stripper, wax, drain cleaners, etc.) may contain chemicals that are hazardous. These chemicals are consumed during normal use.	Use according to instructions on product labels does not constitute disposal. Discarded full-strength products may exhibit characteristics of ignitability, corrosivity, reactivity, or toxicity.	Empty containers of 5 gallons or less (meeting the definition of an empty container) can be disposed of in commercial waste bins. Discarded unused products will be characterized based on review of product labels and MSDSs and disposed of appropriately.	Not required
Used consumer electronic products and components	Cell phones, personal computers, computer perhipherals (e.g., printers), pagers, personal digital assistants, process control system components	Universal hazardous waste	Universal waste destination facility to be identified	Not required
Light tubes	Includes fluorescent light tubes, high-pressure sodium lamps, and other lamps that exhibit a characteristic of a hazardous waste.	Universal hazardous waste	Universal waste destination facility to be identified	Not required
Batteries	Rechargeable nickel-cadmium batteries, lithium batteries, alkaline batteries,	Universal hazardous waste	Universal waste destination facility to be identified	Not required

TABLE 2-1
Characterization of Waste Streams at the Colusa Generating Station
Waste Management Plan, PG&E Colusa Generating Station

Waste Stream	Characteristics	Classification	Disposal	Analysis Required
	silver button batteries, mercury batteries, small sealed lead-acid batteries, carbon-zinc batteries, and any other batteries that exhibit a characteristic of a hazardous waste			
Lead acid batteries – automotive or large industrial	Contain lead and sulfuric acid	Recyclable hazardous waste	Destination facility to be identified	Not required
Off-specification chemicals	Unusable new products, materials that cannot be returned to the vendor, and expired materials (shelf-life exceeded)	Chemical products may be non-hazardous, listed hazardous wastes, or characteristic waste.	Non-hazardous waste will be discarded in commercial waste bins. Hazardous waste will be disposed appropriately following characterization based on product labels and MSDSs.	Not required; management to be determined based on product label and MSDS.
Spent sorbent	Varies with wastes absorbed. May contain oil, solvents, coolant, or diesel fuel. Listed solvents are not expected to be used at the facility.	Non-hazardous waste if used to absorb a non-hazardous liquid; non-RCRA hazardous waste if used to absorb oil; RCRA hazardous waste if used to absorb a listed solvent or material that causes the sorbent to become a characteristic or listed hazardous waste	Non-hazardous waste will be discarded in commercial waste bins. Oil-contaminated sorbent will be disposed as a non-RCRA hazardous waste based on generator knowledge. Other hazardous waste sorbent will be disposed based on either generator knowledge if the material absorbed in known or analysis if it is not known.	Not required except when the material being absorbed is not known.
Aerosol cans	Aerosol cleaners and lubricants may contain listed chemicals. In addition, aerosol propellants and materials may be ignitable. Materials may also be	Universal hazardous waste	Empty, expired unused, or partially used aerosol cans	Not required; management can to be determined based on product label and MSDS.

TABLE 2-1
Characterization of Waste Streams at the Colusa Generating Station
Waste Management Plan, PG&E Colusa Generating Station

Waste Stream	Characteristics	Classification	Disposal	Analysis Required
	corrosive or reactive.			
Used oil	Used oil includes lubricating oil, gearbox oil, compressor oil, bearing oil, transformer oil, metal working oil, and hydraulic oil that is not mixed with solvents.	Non-RCRA hazardous waste	Evergreen Oil or similar used oil recycler	Testing to confirm total halogen concentration is less than 1,000 parts per million. Testing is typically provided as a service by the oil recycler.
Painting wastes	Large-scale work is contracted out. Paint wastes include cans of unused or partially used paint, empty paint cans, and paint contaminated materials (brushes, rollers, tarps, and wipes).	It is assumed that waist paints are hazardous wastes. Paint-contaminated material is typically non-hazardous unless disposed when the paint is still wet.	Discarded unused or partially used paint will be characterized based on review of product labels and MSDSs and will be disposed of appropriately.	None required
Biohazard wastes	Biohazard waste may result from first air operations.	Biohazard	Transport to a local hospital for disposal by incineration	None required
Sanitary wastewater	Wastewater from toilets, sinks, showers, and janitorial closets.	Non-hazardous. Waste management provisions include posting signs at sinks and training employees regarding materials prohibited from draining at sinks.	Delta Diablo Sanitation District treatment plant	Monitoring per Industrial Waste Permit
Used oil filters	Used oil filters are hazardous based on oil content and may exhibit hazardous characteristics for lead and other heavy metals.	Used oil filters are classified as recyclable hazardous wastes provided that they are managed per requirements including draining of free-flowing oil	Drained oil filters may be transported to an approved destination such as Evergreen Oil under a bill of lading, provided that requirements for used oil filter management have been met.	None required

TABLE 2-1
Characterization of Waste Streams at the Colusa Generating Station
Waste Management Plan, PG&E Colusa Generating Station

Waste Stream	Characteristics	Classification	Disposal	Analysis Required
Reusable soiled textiles (shop towels)	Varies with material absorbed. May contain oil, solvents, or other chemicals.	May be managed as a recyclable material excluded from classification as a waste if managed in accordance with requirements for reusable soiled textiles.	Recycle at facility that is compliant with requirements for reusable soiled textiles.	None required
Empty product containers	Empty containers may contain residues that have hazardous characteristics. Care should be taken in handling empty containers previously holding ignitable materials as they may contain ignitable vapors.	Empty containers meeting the regulatory definition of empty (e.g. all contents have been poured out) may be disposed of as non-hazardous waste provided they also meet empty container management requirements.	Empty containers of 5 gallons or less may be disposed with commercial waste. Empty containers of greater than 5 gallons need to be labeled with the word “empty” and the date they were emptied and either sent for reconditioning or for scrap within one year of becoming empty.	None required
Scrap metal	Used metal parts	Recyclable materials (22 CCR 66261.6(a)(3)	Place in scrap metal bins for transportation to a scrap metal recycler.	None
Compressed gas cylinders	Cylinders containing pressurized oxygen, acetylene, argon, nitrogen, and calibration gas blends; may contain residual pressure.	Non-hazardous solid waste when empty	Return refillable cylinders to vendors. Dispose of non-refillable cylinders as non-hazardous waste.	None
Spent solvent, sludge, and filters from parts washers.	Water-based and hydrocarbon based spent solvent, sludge, and filters.	Hydrocarbon-based solvent is typically hazardous and is collected and recycled.	Contract a parts washer service to recycle parts washer spent solvent in accordance with regulation.	None required unless operations change or solvent changes.
Used blasting grit	Used blasting grit may contain metal from the parts processed as well as coating	The material will be collected for characterization prior to	Manage as a hazardous waste. The material will be disposed at an approved	The analysis to be performed will be based on the waste profiling requirements of the

Waste Stream	Characteristics	Classification	Disposal	Analysis Required
	residue.	disposal.	disposal facility in accordance with federal, state, and local regulations.	disposal facility.
Oil/water separator sludge	Material collecting on the bottom of the oil/water separator may include oil-contaminated metals and other solids.	The material will be managed has a hazardous waste based on waste analysis.	Manage as a hazardous waste. The material will be disposed at an approved disposal facility in accordance with federal, state, and local regulations.	The analysis to be performed will be based on the waste profiling requirements of the disposal facility.
Used engine coolant	Used engine coolants are mixtures of water and organic compounds such as ethylene glycol.	Spent coolants are typically non-RCRA hazardous wastes.	Recycle at Evergreen Oil or similar facility.	None required
Wet Surface Air Cooler (WSAC) Sludge	WSAC sludge is a mixture of ambient particulate matter and water.	Dependent on samples—likely non-hazardous. Class II/III landfill if nonhazardous; Class I if hazardous.	Store in bins. Bins are to be covered if rain is predicted. Storage is allowed until container is full. Waste will be transported off-site weekly.	Perform total analysis (i.e. TCLP, TTLP, WET, etc.) to characterize the waste. If process remains consistent through year, perform characterization 1x/year
Salt Cake	Residual concentrated brine solution	Dependent on samples—likely non-hazardous. Class II/III landfill if nonhazardous; Class I if hazardous.	Store in bins. Bins are to be covered if rain is predicted. Storage is allowed until container is full. Waste will be transported off-site weekly.	Perform total analysis (i.e. TCLP, TTLP, WET, etc.) to characterize the waste. If process remains consistent through year, perform characterization 1x/year.

MSDS = Material Safety Data Sheet.

Table 2-1

Characterization of Waste Streams at the Colusa Generating Station Waste Management Plan, PG&E Colusa Generating Station

Waste Stream	Characteristics	Classification	Disposal	Analysis Required
Soil & Rock	Excavated soil/rock From Oil spills	Depends on sample likely non-hazardous Class II/III if nonhazardous Class I if hazardous	Manage as a hazardous Waste. The material will disposed at an approved facility. In accordance with federal,state and local regulation	Preform total analysis (i.e., TPH,CAM17) to characterize the waste.

2025 Waste Stream Detailed

Waste Stream	Quantity	On-Site Storage	Off-Site Disposal
Non RCRA Hazardous Waste, Solid (Drained Oil Filters)	550 Pounds	Store for less than 90 days	Shipped to approved TSD facility (CHES)
Non RCRA Hazardous Waste, Solid (Oily Debris)	3400 Pounds	Store for less than 90 days	Shipped to approved TSD facility (CHES)
Non RCRA Hazardous Waste, Liquids (Mixed Oils)	2795 Pounds	Store for less than 90 days	Shipped to approved TSD facility (CHES)
Universal Waste (Electronic Devices)	575 Pounds	Store for less than 365 days	Shipped to approved TSD facility (CHES)
Hazardous Waste Liquid (Waste Water)	52400 Gallons	Stored for less than 90 days	Shipped to approved TSD facility (Seaport)
Hazardous Waste Adhesives	45 Pounds	Stored for less than 90 days	Shipped to approved TSD facility (CHES)
Non RCRA Hazardous Waste Flamable Solids. Organic NOS (Acetone, Ethyl Benzene)	10 Pounds	Stored for less than 90 days	Shipped to approved TSD facility (CHES)
Non RCRA Hazardous Waste, Liquids (Water Chemtreat)	3600 Pounds	Stored for less than 90 days	Shipped to approved TSD facility (CHES)
Non RCRA Hazardous Waste, Liquids (Oil, Water)	600 Pounds	Stored for less than 90 days	Shipped to approved TSD facility (CHES)
Universal Waste (Batteries)	65 Pounds	Stored for less than 180 days	Shipped to approved TSD facility (CHES)
Non- RCRA Hazardous Waste, Solid (Aluminum Oxide, Sodium Oxide)	3200 Pounds	Stored for less than 90 days	Shipped to approved TSD facility (CHES)
Non RCRA Hazardous Waste, Solids (Silicone Pyrophosphate, Quartz Dust)	800 Pounds	Stored for less than 90 days	Shipped to approved TSD facility (CHES)
Waste Flamable Liquids (Gasoline, Diesel)	75 Pounds	Stored for less than 90 days	Shipped to approved TSD facility (CHES)
Universal Waste (Aeresols)	65 Pounds	Stored less than 90 days	Shipped to apporved TSD facility (CHES)

Non Regulated Solid (Non PCB Ballasts)	15 Pounds	Stored less than 180 days	Shipped to approved TSD facility (CHES)
Waste Alcohols , N.O.S. (Ethanol, Methanol)	50 Pounds	Stored less than 90 days	Shipped to approved TSD facility (CHES)

Pacific Gas and Electric Company®

Attachment D

Post-Certification Changes

Per Com-7 Item 4 we are to provide; “A Summary of the current project operating status and an explanation of any significant changes to the facility operations during the year.”

No significant changes were made at CGS in 2025.

Pacific Gas and Electric Company®

Attachment E

Summary of Missed Deadlines

Per Com-7 Item 5 we are to provide: “An explanation for any submittal deadlines that have been missed, accompanied by an estimate of when the information will be provided”

No submittal deadlines were missed for 2025.

Pacific Gas and Electric Company®

Attachment F

Governmental Agency Submittals and Issuances

The following is a listing of filings submitted to, or permits issued by, other governmental agencies during the year:

CGS Agency Submittals; January 1, 2024 – December 31, 2025

Colusa County Air Pollution Control District

Quarterly Operating Report (Permit Condition 17) – January 28, 2025; April 29, 2025; July 24, 2025; October 29, 2025

Annual RATA/Source Test – October 2025

Title V Annual Certification of Compliance January 2025

EPA

Semi Annual CEMs Report (X.G.5) – January 2025; July 31, 2025

CUPA

Revised Hazardous Materials Business Plan via CERS – January 24, 2025

State Water Resources Control Board

Annual Stormwater Report – July 2024

Pacific Gas and Electric Company®

Attachment G

Projected Compliance Activities 2026

Per Com-7 Item 7 we are to provide; "A projection of project compliance activities scheduled during the next year."

In 2026 PG&E intends to continue reporting on the standard required compliance items. These include but are not limited to:

*Quarterly CEMS Reports/Operations Reports
*Annual Compliance Reports
*Notifications of Source Testing and Associated Source Test Reports
*Annual Storm Water Report
*Completion of Bat Netting beneath the ACC

Pacific Gas and Electric Company®

Attachment H

Additions to On-Site Compliance Files

Pacific Gas and Electric Company®

Per Com-7 Item 8 we are to provide; "A listing of this year's additions to the on-site compliance files."

All of the above noted items in Attachment F which were submitted to agencies other than the CEC, as well as those items submitted to the CEC have been added to the site compliance files.

Pacific Gas and Electric Company®

Attachment I

Contingency Plan Evaluation

Pacific Gas and Electric Company®

Per Com-7 Item 9 we are to provide; "An Evaluation of the on-site contingency plan for unplanned facility closure, including any suggestions for bringing the plan up to date."

Upon Review of the Site Contingency Plan there have been no changes in operations or company business practices to warrant changing of the on-site contingency plan for unplanned facility closure.

Pacific Gas and Electric Company®

Attachment J

Complaints / NOVs / Citations

Per Com-7 Item 10 we are to provide: "A listing of complaints, notices of violation, official warnings, and citations received during the year, a description of the resolution of any resolved matters, and the status of any unresolved matters"

In 2025, CGS did not receive any complaints, warnings, or citations.

Pacific Gas and Electric Company®

Attachment K

Worker Safety-6, Maxwell Fire Department Payment

Per Worker Safety-6 The owner shall provide the CEC CPM with verification of funding to the Maxwell Fire Department for required fire protection services mitigation pursuant to the agreement with the Department or the CEC CPM approved independent consultant study.

Maxwell Fire Protection District

May 1, 2025

Josh Harris, Plant Manager
Pacific Gas & Electric
Colusa Generating Station
4780 Dirks Road
Maxwell, CA 95955

Dear Josh,

This is a request for the annual payment as stated by the agreement between PG&E and the Maxwell Fire Protection District dated March 24, 2009. The payment is to be adjusted for inflation based on the Bureau of Labor statistics for the San Francisco Region and County taxes collected on the project. The inflation factor for 2024 was 2.8% and the taxes collected on the project for 2023 was $17,338.00 Total due the Maxwell Fire Protection District is stated below.

Annual payment	*$356,850.00*
Inflation 2024	*+$9,991.00*
County Taxes	*-17,338.00*
Total Due	*$349,503*

Sincerely,

Kenny Cohen Maxwell Fire Chief.
