Only safe green energy only

I am an aging hippie who has lived within 1/2 mile of the proposed Minto Rd site. Im for green energy. Lithium batteries are not green or safe when smashed into containers. The repeated Moss Landing battery fires are proof. I am concerned for the health and welfare of my neighbors and larger community. I believe this site was chosen in large part because our farm community is largely Hispanic. Ecologic racism was not a term I new til now. There are safer technologies for battery storage. Please consider a project with sodium or vanaium as an option. Or, if you cannot be safe, please dont be sorry for the damage these types of projects have caused already.
