No BESS

Dear CEC,

The BESS facilities in Moss Landing have had six hazardous incidents in five years. These incidents have released toxins in our environment, impacting humans and animals. This is not a safe process or facility and obviously there are not enough safeguards or oversight involved in these kinds of facilities. Therefore, planning more of them will definitely continue to endanger the health and well-being of every community that they are located in. We do not want BESS facilities anywhere!!! They are not an energy solution for our time! Please do not allow these facilities to continue to proliferate as they have proven that they are dangerous and do not care for the well-being of others, only their own power and profit.

Need more energy? Start by designing more energy efficient homes, buildings and cars. We already have all the knowledge, skills and expertise to create energy efficient cities, we are just too beholden to billionaires and corrupt to enact it. Try something new and mandate energy efficient, passive solar designs and get out of the pockets of billionaires and start working for the people of California, your brothers and sisters, your nieces and nephews and your whole human family. I trust you can do the right thing and stop more BESS facilities. They are not the solution and instead are a phenomenal problem.

You got this! Do the right thing!
Alaya Vautier
