BESS - CA Clean Communities Act - LA Council File 19-1155

I need to connect over BESS location within neighborhood communities - I want to see construction and innovation occur it is good. But we need to use the stored energy to invest in the communities that residents of disadvantaged communities are within. I am becoming closer to USC, Cal-Poly and have an investment in inviting youth and overlooked youth (millennials such as myself) to provide solutions. That are not only contracted for the largest companies. It is interesting to be working my way through Los Angeles and seeing that my generation and youth are SO SO intimidated by the bigger companies. We can change that. I really want to know how to get more involved with the Disadvantaged Community Advisory Group.

I want to mention Satya Nadella as well it is worth exploring the concept of a self sustaining community and coordinating with Microsoft and the State. For inclusive workshops on energy systems development. Coordination with ECDs, banks, CDFIs, and return on investment to the State is possible.

I need to coordinate with the CEC over this item.
