Handler ID: CAD031546393
Generator Status: LQG
Recycler Activity?: YES
Recycler Activity Note: This facility has been identified as a Recycler Facility with indication of Reclamation and Recovery in the RCRA Biennial Report Module for Management Methods
H010 - Metals recovery including retorting, smelting, chemical, etc.
H011 - Mercury recovery (includes mercury retorting, bulb/lamp crushing and mercury vapor recovery, thermostat recovery, mercury from medical equipment recovery, mercury car switch recovery, etc.)
H015 - Deployment/deactivation of airbag waste followed by metals recovery
H020 - Solvents recovery
H039 - Other recovery or reclamation for reuse including acid regeneration, organics recovery, etc.
H050 - Energy recovery at this site; used as fuel (includes on-site fuel blending before energy recovery)
H061 - Fuel blending prior to energy recovery at another site (waste generated on-site or received from off-site)

Violation/Evaluation Summary

Note: VIOLATION or UNDETERMINED: There are VIOLATION or UNDETERMINED details or records associated with this facility (EPA ID) in the Compliance Monitoring and Enforcement table dated Apr 2025.

Violations

Violation Date: 08/27/2015 ***Violation Source:*** CERS
Violation Program: HWLQG ***Violation Division:*** Santa Clara County Environmental Health
Citation: 22 CCR 15 66265.31 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.31
Violation Notes:

Returned to compliance on 09/25/2015. Observed significant pooling of wash liquid, pH~2, in a piping trench near area FF (hot air). Ensure secondary containment does not hold hazardous wastes. Also observed corrosive liquid (pH~1-2) in the middle of the treatment area and also on the floor of the acid storage area.

Violation Description:

Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to the air, soil, or surface water which could threaten human health or the environment.

Violations

Violation Date: 07/06/2022 ***Violation Source:*** CERS
Violation Program: PBR ***Violation Division:*** Santa Clara County Environmental Health
Citation: 22 CCR 45 67450.3(c)(9)(F) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.3(c)(9)(F)
Violation Notes:

THE CURRENT TANK ASSESSMENT WAS REVIEWED ON SITE AND VERIFIED TO BE MISSING THE FOLLOWING REQUIRED ELEMENTS: -TANK MATERIAL THICKNESS, HOW WAS THE MEASUREMENT TAKEN -AGE OF TANK -SKETCH OR DRAWING OF TANKS WITH DIMENSIONS -SEISMIC -FROST -FOUNDATION

Violation Description:

Failure of generator to obtain assessment or reassessment every five (5) years or the remaining service life of the tank system, as stated in the engineer's assessment, whichever is less. This assessment applies to onground or aboveground tank systems containing only non-RCRA hazardous wastes generated onsite, and tank systems authorized under Permit-by-Rule, Conditional Authorization, and Conditional Exemption or for a small quantity generator onground or aboveground tank systems containing RCRA hazardous wastes generated onsite.

Violations

Violation Date: 07/06/2022 ***Violation Source:*** CERS
Violation Program: PBR ***Violation Division:*** Santa Clara County Environmental Health
Citation: 22 CCR 45 67450.3(c)(7) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.3(c)(7)
Violation Notes:

Returned to compliance on 08/05/2022. THE TANK SYSTEMS ARE MARKED BUT THE TREATMENT UNIT NAME IS NOT CONSISTENT WITH CERS DOCUMENTATION.

Violation Description:

Failure to permanently mark the exterior of each Fixed TU with the name of the person which owns or operates the FTU, facility identification number and an individual serial number.

Violations

Violation Date: 07/01/2022 ***Violation Source:*** CERS
Violation Program: HWLQG ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.5 25160(b)(1)(C) - California Health and Safety Code, Chapter 6.5, Section(s) 25160(b)(1)(C)
Violation Notes:

Returned to compliance on 08/05/2022. GENERATOR COPIES HAVE NOT BEEN SUBMITTED TO DTSC FOR MOST OF 2019, 2020, AND 2021. ***BEGIN TO PROVIDE A COPY OF THE MANIFEST TO DTSC WITHIN 30 DAYS. SEE CORRECTIVE TEXT BELOW.

Violation Description:

Failure to send a legible copy of each hazardous waste manifest to the Department within 30 days of each shipment of hazardous waste.

Violations

Violation Date: 08/27/2015 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.95 25505.1 - California Health and Safety Code, Chapter 6.95, Section(s) 25505.1
Violation Notes:

Returned to compliance on 09/25/2015. Facility has not made required notification to property owner.

Violation Description:

Failure to notify property owner in writing that the business is subject to the business plan program and has complied with its provisions.

Violations

Violation Date: 04/20/2022 ***Violation Source:*** CERS
Violation Program: PBR ***Violation Division:*** Santa Clara County Environmental Health
Citation: 22 CCR 45 67450.2(b)(2) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.2(b)(2)
Violation Notes:

Returned to compliance on 08/05/2022.

Violation Description:

Failure to submit the signature page for the onsite treatment notification.

Violations

Violation Date: 08/27/2015 ***Violation Source:*** CERS
Violation Program: HWLQG ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.5 Multiple Sections - California Health and Safety Code, Chapter 6.5, Section(s) Multiple Sections
Violation Notes:

Returned to compliance on 09/25/2015. Observed a 1-2 inch long piece of solder dross disposed of in a trash bin with glove, paper, and cue tip waste items. Facility personnel stated that dross is collected with the trash and is sorted out before being dumped into a larger dumpster. DO NOT COLLECT OR DISPOSE OF HAZARDOUS WASTE IN AN UNMARKED TRASH BIN.

Violation Description:

RCRA Large Quantity Generator Program - Abandonment/Illegal Disposal/Unauthorized Treatment - General

Violations

Violation Date: 07/06/2022 ***Violation Source:*** CERS
Violation Program: PBR ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Notes:

LAB A -PROPANOL WASTE GENERATED DAILY IS POURED DOWNED THE DRAIN TO FTU#1, THIS WASTE STREAM IS NOT ELIGIBLE FOR

TREATMENT. -WASTE FLUX WAS ALSO SEEN IN THE LABORATORY, IT'S UNCLEAR IF THE WASTE IS ALSO POURED DOWN THE DRAIN TO THE TREATMENT SYSTEM. ***BEGIN CONTAINERIZING HAZARDOUS WASTES THAT ARE NOT ELIGIBLE FOR TREATMENT AND SHIP THEM OUT ON A HAZARDOUS WASTE MANIFEST. RETAIN COPIES FOR REVIEW.

Violation Description:

Tiered Permitting Program - Operations/Maintenance - General

Violations

Violation Date: 07/06/2022 ***Violation Source:*** CERS
Violation Program: HWLQG ***Violation Division:*** Santa Clara County Environmental Health
Citation: 22 CCR 15 66265.52 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.52
Violation Notes:

Returned to compliance on 08/05/2022. FACILITY SUBMITTED A CONTINGENCY PLAN VIA CERS BUT THE PLAN IS MISSING THE FOLLOWING ELEMENTS FOR A LARGE QUANTITY GENERATOR: -ACTIONS PERSONNEL WITH TAKE IN A EVENT OF AN EXPLOSION AND UNPLANNED RELEASES OF HAZARDOUS WASTE -NAME, PHONE NUMBER AND ADDRESS FOR EMERGENCY COORDINATORS ***FOR THE PERSONNEL INFORMATION, CERS DIRECTS TO CALL (408) 250-0163. THE PHONE NUMBER GOES TO VOICE MAIL BUT THE VOICE MAIL BOX IS FULL.

Violation Description:

Failure to include all of the following in the Contingency Plan: description of actions personnel will take in response to a release or emergency, arrangements with local authorities, list of emergency coordinators including name, addresses & phone numbers, list of emergency equipment and their physical description, location and capabilities, evacuation plan, and OES phone number. (If the owner or operator has already prepared a Spill Prevention, Control, and Countermeasures (SPCC) Plan or some other emergency or contingency plan, the owner or operator need only amend that plan to incorporate hazardous waste management provisions.)

Violations

Violation Date: 07/06/2022 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Notes:

Returned to compliance on 08/05/2022. EMERGENCY RESPONSE AND CHEMICAL HANDLING TRAINING WAS NOT AVAILABLE FOR REVIEW, THE TRAINING WAS REQUESTED BUT NOT PROVIDED.

Violation Description:

Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Violations

Violation Date: 07/01/2022 ***Violation Source:*** CERS

Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Notes:

Returned to compliance on 07/26/2017. Observed approximately 5 -10 gallons of liquid in a piping sump located contiguous to the Nickel and Gold line. Waste treatment supervisor Gumaro Limon indicated that employees, in the past, have rinsed the container that is used to add cyanide and other chemicals to the baths in the piping sump area. Employees have been instructed not to rinse over that piping sump but evidence suggests that the 5-10 gallons in the trench is a result of this activity. The container was observed with the words "Gold" and a water hose was in the immediate area of the piping sump. PH was tested by Mr. Limon and was approximately 10-11 indicating it is likely from a rinse of a gold cyanide containing container. No other high PH baths are in this area. In the past this waste has been pumped through the treatment system. DETERMINE IF THIS IS CYANIDE CONTAINING WASTE AND IF SO, DO NOT PUMP THROUGH A TREATMENT SYSTEM THAT ISN't DESIGNED FOR OR PERMITTED TO TREAT CYANIDE WASTE.

Violation Description:

Failure to determine if the waste generated is a hazardous waste.

-FTU #2, treats less concentrated drag out and rinses with heavy metals such as copper and on occasion lead and nickel. Treatment unit receives drag out and rinses from Bulding A, rinses from the Deburr line and Pumice line from Building B. Influent enters the Ion Exchange Holding Tank; the contents are pumped to Reaction Tank #2 for pH adjustment, the tank is plumed to 2 pumps that are alternate. Each pump is plumed to 3 ion exchange columns, for example if pump #1 is open the rinse is sent to the first 3 ion exchange columns for metals removal. Once the ion exchange bottles reach a certain metal saturation the bottles are washed from the top with sulfuric acid for metals removal and ion exchange regeneration. This process drops the metal

to the bottom of the bottle to allow for metal sludge flushes, the metal sludge is plumed to the FTU #1 treatment system for further treatment. ***Holding Tank is not equipped with an overfill sensor, if waste were to [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Santa Clara County Environmental Health
Eval Program: PBR
Eval Source: CERS

Eval Notes:

Hazardous wastes generated on-site as a result of plating related activities include but are not limited to: Corrosives (low and high pH), metals (Copper, Nickel, Lead), Cyanide, filter cake. Copper, Nickel, and Lead is treated on-site while cyanide is containerized and sent for off-site management. Metal rinses are sent through piping to a sump where the waste water is then sent to reaction tank 1 where pH is adjusted and flocculation occurs using ferrous sulfate. After the reactor tank, waste is sent to a dedicated flocculation tank for further flocculation using a polymer. Waste is then sent to a clarifier with various stages with the sludges and solids being sent to the filter press and liquids in clarifier is sent through one of the two sand filters and then to final discharge. Facility has dual pH probes in reaction tank and final discharge and are set to alarm below 9.5 or above 11.5. System is manually placed in rejection mode if pH or metals are out of spec [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Notes:

FTU #1, Concentrated corrosive drag out and rinses with heavy metal such copper and occasionally lead and nickel. Influent into FTU #1 come from ENEPIG Line, Oxide line, Gold line (no cyanide), Chemical clean line, AOI line, and BS Line rinses. These drag out and rinses are concentrated and required more treatment before discharging to the POTW. Rinses enter the Waste Treatment Holding Tank via piping from buildings A and B, waste initially receives pH adjustment in the Reaction Tank, followed by the addition of flocculant for metal ppm in the Flocculation Tank, the waste is placed in the Clarifier tank to allow further precipitation. The Clarifier decant liquid is sent to 2 sand filters for water wash, the wash rinse enters the Final Tank for a pH adjustment and finally discharged to the POTW. The sludge generated in the Clarifier Tank is sent to the Sludge Tank for de watering, the sludge is pumped to the filter press for further de watering and solid sludge [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Source: CERS
Eval Notes:

On site to conduct a Hazardous Materials Business Plan routine inspection. The last annual certification is dated 4/26/2022, the previous certification was 3/1/2021.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 12/07/2016
Violations Found: No
Eval General Type: Other/Unknown
Eval Type: Other, not routine, done by local agency
Eval Division: Santa Clara County Environmental Health
Eval Program: HWLQG
Eval Source: CERS
Eval Notes:

Inspection performed in response to complaint referred to county on December 6, 2016. The facility was referred to the county due to concerns of hazardous waste running through an exposed trench. Structural design and layout of plating area leads to wet floor conditions in certain areas where plating solution or drag-out pools in flat areas of the secondary containment. Spilled material is periodically managed by a daily rinsing that directs the spilled material to the treatment system via an impervious epoxy-lined concrete trench/channel. Some secondary containment trays that are above the trench have been drilled through to help facilitate daily cleaning of spill and drag-out material; these areas include the two cleaning lines and the silver line. In order to prevent the facility from being regulated as a permitted hazardous waste storage facility, wet floors must be cleaned within "a reasonable time". The state of California has provided "wet-floor" guidance and [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

EI ID: 10348789
EI Description: Aboveground Petroleum Storage

Violations

Violation Date: 08/20/2013
Violation Source: CERS
Violation Program: HW
Violation Division: Santa Clara County Environmental Health
Citation: 40 CFR 1 262.34(d)(5)(iii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(iii)
Violation Notes:

Returned to compliance on 09/12/2013. EMPLOYEES ARE NOT THOROUGHLY FAMILIAR WITH HAZARDOUS WASTE REQUIREMENTS.

Violation Description:

Failure to ensure employees are familiar with the handling and compliance of hazardous waste regulations and emergency response.

Violations

Violation Date: 03/27/2019 ***Violation Source:*** CERS
Violation Program: APSA ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Notes:

Returned to compliance on 09/05/2019. SPCC plan does not include contact information for facility response coordinator and refers to the Emergency Action Plan, which is not included in the plan.

Violation Description:

Failure to include in the SPCC Plan:

1. A contact list and phone numbers for the facility response coordinator, National Response Center, cleanup contractors with an agreement for response, and all Federal, State, and local agencies who must be contacted in case of a discharge

2. Information and procedures that would enable a person reporting an oil discharge to relate all information as described in 40 CFR 112.7(a)(4), unless facility submitted a Facility Response Plan.

Citation: 22 CCR 12 66262.23(a)(4) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.23(a)(4)
Violation Notes:

Returned to compliance on 09/12/2013. THE HAZARDOUS WASTE MANIFEST "GENERATOR" COPY IS NOT BEING MAILED TO DTSC WITHIN 30 DAYS OF THE HAZARDOUS WASTE SHIPMENT.

Violation Description:

Failure to send hazardous waste manifest copies to DTSC.

Violations

Violation Date: 03/27/2019 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Notes:

Returned to compliance on 09/05/2019. SITE IS NOT A MINIMAL STORAGE SITE AS INDICATED ABOVE, BUT IS STILL SUBJECT OT DISCLOSURE OF MATERIALS STORAGE AMOUNTS AND LOCATIONS. Facility did not report hazardous materials subject to storage ordinance on CERS inventory list. Note that items may be grouped by hazard class for reporting. All items denoted in the comments section with a * under-reported or not reported in CERS. Only liquid propane gas was reported accurately in CERS inventory list.

Violation Description:

Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violations

Violation Date: 03/27/2019 ***Violation Source:*** CERS
Violation Program: APSA ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Notes:

Returned to compliance on 09/05/2019. Monthly and annual tank integrity testing is not being conducted as specified in the SPCC plan. Plan calls for facility to complete STI SP001 monthly and annual checklists in lieu of tank integrity testing, but no such inspections have been completed.

Violation Description:

Failure to comply with one or more of the following requirements:
1. Have record of inspections and integrity tests signed by the appropriate supervisor or inspector.
2. Keep written procedures and records of inspections and integrity tests for at least three years.
3. Keep comparison records.

Violations

Violation Date: 03/27/2019 ***Violation Source:*** CERS

Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Notes:

Returned to compliance on 09/05/2019. Reporting form on page 11 of SPCC plan does not instruct employees to record "estimates of the quantity discharged as described in 112.1(b)", "any damages or injuries caused by the discharge", "whether an evacuation may be needed", and the "names of individuals and/or organizations who have also been contacted".

Violation Description:

Failure to include in the SPCC Plan:

1. A contact list and phone numbers for the facility response coordinator, National Response Center, cleanup contractors with an agreement for response, and all Federal, State, and local agencies who must be contacted in case of a discharge

2. Information and procedures that would enable a person reporting an oil discharge to relate all information as described in 40 CFR 112.7(a)(4), unless facility submitted a Facility Response Plan.

Evaluations

Eval Date: 03/27/2019
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Santa Clara County Environmental Health
Eval Program: APSA
Eval Source: CERS
Eval Notes:

Facility last certified their SPCC plan on 1/25/2015 and obtained a Profession Engineer's certification on 12/31/2016. Facility has the following bulk storage containers: 12,000 gallon gasoline tank 269 gallon used oil tank Containment and Overfill Protection: Both tanks are double-walled. The gasoline tank has electronic monitors for interstitial and primary spaces and electronic monitoring panel is checked daily and maintained during annual monitoring certifications by a contractor. The used oil tank is inspected weekly and interstitial space is monitored by direct visual inspection. Both tanks

rely on a fast response system and constantly attended fueling to prevent overfills. The SPCC states that the tank has a high level cut-off device, but this could not be verified during review of monitoring certifications or during inspection. The gasoline tank also has a visible clock gage and digital reading that allows the facility to determine the liquid level before [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 03/27/2019
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Santa Clara County Environmental Health
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

Facility last submitted their Hazardous Materials Business Plan using CERS ID 10348789 on 2/13/19 and 2/8/19. Employees are trained in annual emergency response and training logs were reviewed at the time of inspection. Property is owned by the facility. Monitoring panel for electronic tank monitoring equipment is inspected daily and logged. Observed the following hazardous materials that are reportable: 12,000 gallons gasoline* 284 gallons used oil* 55 gallons of used coolant* 1150 gallons of liquid propane gas 9000 pounds of road flares* Estimated 3487 pounds of ammunition* Observed the following hazardous materials that are reportable according to the hazardous materials storage ordinance: 1x55 gallon container of used oil filters* 1x55 gallon container of oily solids* 30 gallons of fire suppression foam for extinguishers* 15 gallons of parts washing liquids* 10 gallons of flammable liquids (used brake fluid)* Approximately 20 gallons of battery acid [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 03/27/2019
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS
Eval Notes:

Facility generates hazardous waste from vehicle maintenance and has the potential to generate hazardous waste from spill cleanup related to operation of the 12,000 gallon gasoline tank. Facility generates used oil, used coolant, oily solids from spill clean-up and paper used oil filters, metal-cased used oil filters, and used brake fluid. Oily rags are commercially laundered and battery cores are exchanged (receipts reviewed). Facility employees inspect waste weekly and inspect the tank to determine waste level and ensure secondary containment is dry. Employees attended county training courses for hazardous waste management. Fire extinguisher are annually serviced, spill kit is adequate, and EPA ID CAL000046139 is currently active. Facility maintains all copies of hazardous waste manifests and universal waste bills of lading onsite for 3 years (reviewed during inspection). The following violations were corrected at the time of inspection: G020 Marking of hazardous [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 03/18/2016
Violations Found: No
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Santa Clara County Environmental Health
Eval Program: APSA
Eval Source: CERS
Eval Notes:

Onsite today for routine aboveground petroleum storage act inspection, noted the following: -Met with Randy Hsu and James Shizuru today -SPCC Plan is onsite, signed by PE and management -Emergency contact is available and employed -Visual inspections are logged in binder onsite by Jim Shizuru -Containment areas are dry and free of leaks, secondary containment is present for the aboveground 12,000 gasoline and 240 gallon waste oil -The records of monitoring maintenance are available; no notation of the overfill device verification is in the records, however, the fill procedure includes verification of tank levels. Recommend including overfill shut-off device verification in periodic monitoring system maintenance inspection. No violations were noted today, thank you.; Note: data in [EVAL Notes] field for some records is truncated from the source.

EI ID: 10094632
EI Description: Underground Storage Tank

Violations

Violation Date: 11/28/2018
Violation Source: CERS
Violation Program: UST
Violation Division: Santa Clara County Environmental Health
Citation: HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2
Violation Notes:

Returned to compliance on 03/13/2019. The spill container for Tank #N1178U003 failed testing today. Test water leaked from the bucket into the fill sump. Obtain a UST Minor Retrofit/Repair permit from HMCD as described below and have the bucket replaced as soon as possible.

Violation Description:

"Failure to meet one or more of the following requirements:

Install or maintain a liquid-tight spill container.

Have a minimum capacity of five gallons.

Have a functional drain valve or other method for the removal of liquid from the spill container.

Be resistant to galvanic corrosion.

Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container.

Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer.

Tested by a certified UST service technician.

Maintain records of spill containment testing for 36 months.

"

Violations

Violation Date: 02/07/2023
Violation Source: CERS
Violation Program: HW
Violation Division: Santa Clara County Environmental Health
Citation: HSC 6.5 25110.10(d) - California Health and Safety Code, Chapter 6.5, Section(s) 25110.10(d)
Violation Notes:

Returned to compliance on 09/13/2024. The facility failed to annually disclose that the facility consolidates hazardous waste generated at remote sites on CERS.

Violation Description:

Failure to annually submit notification of generator's intent to remotely consolidate hazardous waste.

Violations

Violation Date: 11/23/2021 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** Santa Clara County Environmental Health
Citation: 23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Notes:

Returned to compliance on 08/15/2022. Observed one Designated UST Operator (DUSTO) visual inspection report that was signed by the owner/operator greater than 72 hours from the date of the visual inspection report. The visual inspection report dated 12/24/2020 was not signed by the owner/operator until 1/05/2021. Ensure that the owner/operator signs the DUSTO visual inspection report acknowledging the results of the inspection within 72 hours of being provided the signed visual inspection report, per 23 CCR 2716(e)(2).

Violation Description:

For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements:
Be performed by an ICC certified DO.
Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy.
Inspect for the presence of liquid/debris in spill containers.
Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly.
Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit.
Check that all testing and maintenance has been completed and documented.
Verify that all facility employees have been trained in accordance with 23 CCR 2715(c).
For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.

Violations

Violation Date: 02/07/2023 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Notes:

Returned to compliance on 09/13/2024. Facility failed to provide adequate training to employees that generate hazardous waste remotely to cover the minimum topics: 1. Hazardous waste labeling requirements at the remote site; 2. Allowed time frames from when the waste is generated to when the waste is taken to the remote consolidation site; 3. Completion of a remote consolidation log.

Violation Description:

Hazardous Waste Generator Program - Operations/Maintenance - General

Violations

Violation Date: 11/28/2018 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** Santa Clara County Environmental Health
Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Notes:

Returned to compliance on 11/28/2018. Inspection of Tank #N1178U003 overfill prevention equipment was due by 10/13/2018 and did not occur until today. Schedule next periodic inspection to occur in or before October of 2021.

Violation Description:

Failure to comply with one or more of the following overfill prevention equipment requirements:
Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or
Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or
Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or
Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.

Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018.

For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter.

For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter.

Inspected within 30 days after a repair to the overfill prevention equipment.

Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer.

Inspected by a certified UST service technician.

Maintain records of overfill prevention equipment inspection for 36 months.

Evaluations

Eval Date: 02/12/2014
Violations Found: No
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Santa Clara County Environmental Health
Eval Program: UST
Eval Source: CERS
Eval Notes:

ONSITE TO OVERSEE THE ANNUAL MONITORING SYSTEM CERTIFICATION. TESTING WAS CONDUCTED BY JOHN CASCIO WITH TAIT. MR. CASCIO IS CURRENT WITH HIS ICC CERTIFICATION AND VEEDER ROOT CERTIFICATION. T1- 6,016 GAL DIESEL T2- 10,152 GAL DIESEL THERE ARE TWO VR PANELS (TLS-350) THAT MONITORS EACH OF THE UST. PRIOR TO AND AFTER COMPLETION OF TESTING, VR PANELS READ; "ALL FUNCTIONS NORMAL" THE FOLLOWING COMPONENTS WERE TESTED DURING TODAY'S INSPECTION AND PASSED; T1- -1- ANNULAR SENSOR -3- SUMP SENSORS -1- GENERATOR ROOM SENSOR ALL OF THE SENSORS PROVIDED AN AUDIBLE/VISUAL ALARM AT THE VR PANEL. - A 5GAL SPILL BUCKET WAS HYDROSTATICALLY TESTED FOR AN HOUR AND PASSED. - OVERFILL PREVENTION WAS VERIFIED BY REMOVING PROBE OUT. T2- -1 ANNULAR SENSOR -2 SUMP SENSORS ALL OF THE SENSORS PROVIDED AN AUDIBLE/VISUAL ALARM AT THE VR PANEL. -A 5 GAL SPILL BUCKET WAS HYDROSTATICALLY TESTED FOR AN HOUR AND PASSED. - OVERFILL PREVENTION WAS VERIFIED BY REMOVING PROBE [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 11/28/2018
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection

Eval Division: Santa Clara County Environmental Health
Eval Program: UST
Eval Source: CERS
Eval Notes:

All underground storage tank (UST) monitoring equipment was tested today by UST Service Technician Jarrett Flewellyn of Tait Environmental Services and functioned properly. Mr. Flewellyn has current ICC California UST Service Technician certification (exp. 3/23/2019) and Veeder-Root certification (exp. 7/3/2019). Sensors were tested per Veeder-Root instructions using water and triggered audible and visual alarms on the TLS-350 consoles. The UST fill spill buckets were hydrostatically tested today by Mr. Flewellyn for 1 hour in accordance with 23 CCR 2637.1 and the PEI/RP1200-17 industry standard. Bucket for UST at the front of the building (Tank #N1178U002) passed. UST overfill prevention equipment was inspected today by Mr. Flewellyn in accordance with 23 CCR 2637.2 and the PEI/RP1200-17 industry standards and passed: - Tank #N1178U002 was installed prior to 7/1/2003, is equipped with a fill sump to secondarily contain the riser pipe, has secondarily contained vent [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Notes:

Inspection began on 1/6/2024 and concluded today with the issuance of this report. On-site to witness triennual testing of underground storage tank (UST) system secondary containment components and overfill prevention equipment testing for one tank. Testing was conducted by TAIT ICC Service Technician, Jaime Jauregui. Mr. Jauregui certifications were as follows: ICC UST Service Technician (exp. 7/16/2026, #8340695), Veeder Root ATG (exp. 11/12/2026, #B48138), OPW UST EVR (exp. 1/2/2026, #103918), Omntec Sump Testing (exp. 11/21/2026, #JJ4561776). Rossan Chua, Environmental Site Manager with AT&T was also on site. Tank N1178U002 (Nearest Junction Ave.): Tank Annular - Test protocol was vacuum testing the tank annular space @ 10" Hg for 1 hour. PASS. Fuel Supply Line - Test protocol was pressure testing the secondary containment pipe @ 5 p.s.i. for 1 hour. PASS. Fuel Return Line - Test protocol was pressure testing the secondary containment pipe @ 5 p.s.i. for 1 [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Notes:

All underground storage tank (UST) monitoring equipment was tested today by Tait Environmental Services. Monitoring equipment associated with the UST at the front of the building (Tank #N1178U002) was tested by UST Service Technician John Cascio and functioned properly except as noted below. Mr. Cascio has current ICC California UST Service Technician certification (exp. 9/14/2017) and Veeder-Root certification (exp. 2/5/2017). Veeder-Root model 794390-420 tank annular sensor and model 794380-208 sump sensors were tested using water and triggered audible and visual alarms on the Veeder-Root TLS-350 console. The sensor in UST fill sump failed to function when tested and was replaced like-for-like. The replacement sensor was tested and functioned properly. No permit was required for the sensor change. This equipment failure is not a violation since the fill sump is not a regulated secondary containment system since the UST system was installed prior to 7/1/2003 and the [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

ON SITE WITH JAIME JAUREGUI, A CALIFORNIA ICC CERTIFIED TECHNICIAN WITH TAIT ENVIRONMENTAL TO WITNESS THE SB898 TEST AND OVERFILL FOR TANK (10,000 GALLONS). MR. JAUREGUI'S CERTIFICATIONS WERE VERIFIED TO BE CURRENT, ICC (EXP: 8/8/2022), VEEDER-ROOT (EXP:9/8/2022) AND FRANKLIN FUELING INCON 4/13/2022). THE UNDERGROUND STORAGE TANK SYSTEM CONSISTS OF TWO BACK UP GENERATORS, 6,000 GALLON AND 10,000 GALLON TANKS. THE FOLLOWING COMPONENTS WERE TESTED AND PASSED: TANK (6,000 GALLONS) -SUPPLY PRODUCT LINE, WAS TESTED AT 5.4 PSI FOR 60 MINUTES. -RETURN PRODUCT LINE, WAS TESTED AT 5.4 PSI FOR 60 MINUTES. -VENT LINE, WAS TESTED AT 5.0 PSI FOR 60 MINUTES. -PIPING SUMP, TESTED HYDROSTATICALLY FOR 15 MINUTES USING THE INCON TESTER. -FILL SUMP, TESTED HYDROSTATICALLY FOR 15 MINUTES USING THE INCON TESTER. -ANNULAR INTERSTITIAL WAS TESTED AT -10.2 INCHES OF VACUUM FOR 60 MINUTES. TANK (10,000 GALLONS) -SUPPLY PRODUCT LINE, WAS TESTED AT 5.4 PSI FOR 60 PRODUCT LINE, [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Notes:

Annual underground storage tank (UST) compliance inspection. All UST monitoring equipment was tested today by UST Service Technician Jarrett Flewellyn of Tait Environmental Services and functioned properly, except as noted below. Mr. Flewellyn has current ICC California UST Service

Technician certification (exp. 2/20/2021) and Veeder-Root certification (exp. 6/27/2021). Sensors were tested per Veeder-Root instructions using water and triggered audible and visual alarms on the Veeder-Root TLS-350 consoles. Alarms from the TLS-350 console for tank #N1178U003 triggered locally, but did not relay to the national operations center due to a faulty telephone line. This is a regularly staffed facility. AT&T personnel were in the process of trouble-shooting the remote communications issue at the end of this inspection. Both UST fill spill buckets were hydrostatically tested today for 1 hour in accordance with 23 CCR 2637.1 and the PEI/RP1200-17 industry standard and [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Conducted a routine hazardous waste inspection on 01/31/2023. Socorro Guzman, Senior Hazardous Materials Specialist with the Hazardous Materials Compliance Division (HMCD) was also present for this inspection. The inspection concludes today with the issuance of this report. The facility is a data center and a remote consolidation site. AT&T employees servicing remote AT&T sites bring all wastes (hazardous, universal and e-waste) back to this facility. All hazardous wastes are first placed in high-density polyethylene bag and then put into a marked 55-gallon drum, dedicated for waste adhesives, caulks, cleaners, encapsulants, foams, gels, herbicides, insecticides, lubricants, putty and vehicle fluids. AT&T has another company, Insight Global, regularly come on-site to sort and separate the bags in the remote consolidation container. The facility's EPA ID number CAL000123666 is active in the Hazardous Waste Tracking System (HWTS). The facility's Small Quantity [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Waste Code Details

Waste Code: 151
Waste Code Desc: Asbestos-containing waste

Waste Code: F001
Waste Code Desc: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F037
Waste Code Desc: PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORM WATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGES GENERATED IN STORM WATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

GeoTracker Search - Cleanup Action Report

Action Type: PUMP & TREAT (P&T) GROUNDWATER
Begin Date: 12/1/1995
End Date:
Phase: Water, Water
Contaminant Mass Removed: 3,365 Pounds
Description:

Action Type: FREE PRODUCT REMOVAL
Begin Date: 8/3/1988
End Date:
Phase: Liquid Waste
Contaminant Mass Removed: 25 Gallons
Description: In August 1988 after the discovery of jet fuel product floating on groundwater, Velcon began a floating product

removal program from two monitoring wells in the jet fuel source area. Periodic pumping of jet fuel product continued through October 1991. Between March 1995 and June 1999, Velcon installed nine groundwater extraction wells on the site. Two more were added in 2001. The amount of fuel removed prior to 1995 isn't known. From 1995 - 2008 25 gallons of free product have been removed.

Action Type: EXCAVATION
Begin Date: 6/3/1993
End Date: 12/1/1994
Phase: Soil
Contaminant Mass Removed:
Description: In June 1993, Velcon removed two above-ground jet fuel/kerosene storage tanks, a resin tank, vapor degreaser, and associated above-ground piping at 1750 Rogers Avenue. In 1994, Velcon removed the six underground jet fuel storage tanks and sump at 1761 Junction Avenue. Approximately 680 cubic yards of pea gravel and 4 cubic yards of jet fuel saturated soil were removed from the tank pit excavation.

Title Description Comments:

Phone call to 1761 Junction Avenue owner. In a telephone conversation with Frank Hamedi, the owner of 1761 Junction Avenue, I asked about the status of the deed restriction required by the Site Cleanup Requirements and the Regional Water Board letter of February 5, 2014, which named Mr. Hamedi as the responsible party for completion of the task requiring a deed restriction for 1761 Junction Avenue, and which required submittal of an acceptable deed restriction by April 8, 2014. I informed Mr. Hamedi that the deed restriction was required to be submitted by April 8, 2014. Mr. Hamedi objected to submitting the deed restriction and asked that I email him the Site Cleanup Requirements with the language requiring a deed restriction highlighted. I told Mr. Hamedi that I would do so and that he was now in violation of the requirement in the February 5, 2014 letter to submit the deed restriction. Mr. Hamedi said that Velcon should provide a draft deed restriction. I pointed out that they already had and that Mr. Hamedi's lawyer had made some changes to the draft and submitted it to the Regional Water Board. We had replied in an October 13, 2011 letter that certain changes needed to be made and that the revised deed restriction was required by October 30, 2011. I informed Mr. Hamedi that he should make the changes we required and submit the deed restriction. If the deed restriction was not submitted the Regional Water Board would issue a notice of violation. Following the phone call I emailed Mr. Hamedi the Site Cleanup Requirements with the specific section and tasks for the deed restriction spelled out. It should be noted that Mr. Hamedi has had the Site Cleanup Requirements for years now.

Title Description Comments:

Meeting. Met with TRC to discuss the status of the groundwater cleanup. The latest sampling results were presented and discussed. The Regional Water Board plan to require indoor air sampling at the building immediately downgradient of 1761 Junction Avenue was discussed. The indoor air sampling requirement is to verify that there is not a vapor intrusion issue with methane from the EISB injections on 1761 Junction. The indoor air sampling would provide information that would also be useful for deciding if the proposed direct push EISB injections in Area C would present a risk for vapor intrusion of methane in buildings further downgradient. TRC presented their proposal for direct push EISB injections in Area C (offsite, downgradient). We also discussed the monitoring wells on the upgradient side of 1750 Rogers Avenue. Two potential ways to deal with TCE impacts here are to do EISB injections to lower concentrations (Water Board preference), or to do a risk assessment including indoor air sampling to determine if the current levels pose any risk.

Title Description Comments:

In June 1993, Velcon removed two above-ground jet fuel/kerosene storage tanks, a resin tank, vapor degreaser, and associated above-ground piping at 1750 Rogers Avenue. In 1994, Velcon removed the six underground jet fuel storage tanks and sump at 1761 Junction Avenue. Approximately 680 cubic yards of pea gravel and 4 cubic yards of jet fuel saturated soil were removed from the tank pit excavation.

Action Type: Cleanup Action
Action: Free Product Removal
Action Date: 8/3/1988
Received Issue Date:
Doc Link:
Title Description Comments:

In August 1988 after the discovery of jet fuel product floating on groundwater, Velcon began a floating product removal program from two monitoring wells in the jet fuel source area. Periodic pumping of jet fuel product continued through October 1991. Between March 1995 and June 1999, Velcon installed nine groundwater extraction wells on the site. Two more were added in 2001. The amount of fuel removed prior to 1995 isn't known. From 1995 - 2008 25 gallons of free product have been removed.

Site History:	

Soil at the Burdened Property was contaminated by operations related to a truck driveline distribution, sales, and repair shop in Suite 1757A, conducted by Bayshore Truck Equipment Co. These operations resulted in contamination of soil with organic chemicals including trichloroethylene (TCE), which constitute hazardous materials as that term is defined in Health & Safety Code Section25260. From February 28,2002 through November 18,2004, AMB operated a soil vapor extraction (SVE) system that reduced concentrations of TCE in shallow soil gas beneath Suite A to below 20 ugIL, and achieved asymptotic recovery rates. A deed restriction was recorded with the County on July 27, 2005, and a Risk Management Plan (RMP) and Environmental Fact Sheet have been prepared and attached to the deed restriction as as "Exhibit B" and Exhibit C", respectively. A copy of this document must be maintained by the Property Owner and shall be consulted prior to and complied with during any activities highlighted in the RMP.

Sub Area Link:
Document Type: Phase 1
Date Completed: 2/24/2016
Comments: DTSC performed a site screening to determine whether any releases of hazardous substances or wastes have occurred at the site that require DTSC to pursue corrective actions. Schlage Lock Company - ADF was a tenant and operated a light manufacturing facility at the site from 1983 to 2001. Schlage Lock operated three hazardous waste treatment units under the Conditionally Authorized permitting tier, a primary treatment unit, filter press, and evaporator. Schlage Lock ceased operation and closed the facility in 2001. The company submitted a Post Closure Report to the Santa Clara County Department of Environmental Health, Hazardous Materials Division, who acknowledged closure of the treatment operation in a July 2, 2001 letter. A Facility Closure Report - Request for No Further Action Determination, dated July 6, 2001, was submitted to the Regional Water Quality Control Board (RWQCB) that summarized sampling and removal of petroleum hydrocarbon-impacted soil as part of the closure. RWQCB issued a no further action letter on February 8, 2002. DTSC concluded in the site screening that based on

Site History:	

In 1998, SCS Engineers conducted a Phase I Environmental Site Assessment (ESA), a geophysical survey, and a Phase II subsurface investigation at the Site (SCS Engineers, 1998). Findings of ESA indicated the following: • The site had been used as a Mack Truck fueling and service station from 1970 to at least 1976; • Three underground storage tanks (USTs) were removed from the site in 1976; • Information regarding the contents of the former USTs, and results of confirmation soil and groundwater samples was not available in regulatory agency files; and • Information reported in a 1990 ESA conducted by Level One indicated that “a potential vent pipe connected to a UST” was identified along the northeast property boundary. Based on the findings of the 1998 Phase I ESA, SCS Engineers conducted a geophysical survey and Phase II subsurface investigation at the site. Presumably, the investigations were conducted to identify whether any USTs were still present beneath the site and identify the known former UST excavation area(s), as well as assess whether subsurface soil had been impacted by the contents of the former USTs. Four soil borings were advanced during the SCS Engineers Phase II investigation. Three soil borings were located in the immediate area where SCS Engineers identified the three former USTs, and one additional boring was placed adjacent to the area where Level One had identified a vent pipe. Soil samples were collected at depths of three and six feet from each soil boring location, however, only the six-foot soil samples were submitted for laboratory analysis. The six-foot soil samples were analyzed for total petroleum hydrocarbons as gasoline (TPHg), diesel (TPHd), benzene, toluene, ethylbenzene, xylenes (BTEX), and total oil and grease (TOG). Analytical laboratory results for the soil samples were reported as below laboratory method detection limit concentrations for all analytes, except TPHd., which was reported in the six-foot soil samples submitted from two of the three soil borings situated in the immediate area of the three known former USTs, as well as the six-foot sample collected from the soil boring placed near the area identified as having a vent pipe. The reported TPHd concentrations ranged from 1.2 milligrams per kilogram (mg/kg) to 7.0 mg/kg (SCS Engineers(b), 1998). In August 1998, a preliminary foundation investigation was conducted for the planned development of the site as a hotel. Four soil borings were advanced for lithologic and geotechnical analysis. Field observations during the geotechnical investigation indicated that staining and petroleum odors were present in subsurface soils beneath the site, however, no soil samples were collected for chemical analysis during this investigation (Donald Banta & Associates, 1998). In March 1999, during site development for the current occupant (Sierra Suites Hotel), impacted soil was encountered during excavation for the courtyard pool. The impacted area was over-excavated and approximately 45,110 gallons of groundwater was pumped from the excavation and disposed offsite. Four confirmation sidewall soil samples were collected at a depth of seven feet around the perimeter of the excavation, and two grab groundwater samples were collected from the excavation prior to and after groundwater removal. One grab-groundwater was collected at a depth of 8.5 feet prior to groundwater removal, and one sample was collected from a depth of 13.5 feet after groundwater had been pumped from the excavation. The sidewall soil samples and groundwater samples were analyzed for TPHd, TPHg and BTEX. The groundwater samples were further analyzed for total lead. Analytical laboratory results of the soil samples were reported as below method detection limit concentrations for all target compounds, except TPHd, which was reported at concentrations ranging from 1.2 to 29 milligrams per kilogram (mg/kg) in all four sidewall soil samples. One grab-groundwater samplewas collected from the UST excavation prior to the removal of contaminated groundwater from the open pit. TPHd, TPHg, and benzene were reported at concentrations of 1.1 milligrams per liter (mg/l), 0.67 mg/l, and 180 micrograms per liter (ug/l) in the grab-groundwater samples collected prior to pumping. A second grab-groundwater sample was collected after 45,110 gallons of groundwater had been removed from the excavation. Following groundwater pumping, TPHd, TPHg, and benzene were reported at concentrations of 110 mg/l, 2.0 mg/l and 550 ug/l, respectively (SCS Engineers(c), 1999). Detectable concentrations of toluene, ethylbenzene and total xylenes were also reported in both grab-groundwater samples, however the reported concentrations were all below their respective maximum contaminant levels (MCLs). In August/September 2003, Geocon conducted a limited grab-groundwater investigation at the site. The investigation included the advancement of twelve boreholes (B1 to B12) to approximately 16 feet (Figure 2). Each boring

was completed as a temporary well point for the purpose of calculating the shallow groundwater flow direction and gradient beneath the site. Grab-groundwater samples were collected from each boring and submitted for laboratory analysis. The grab-groundwater samples were analyzed for TPHd, TPHg, BTEX, methyl tert butyl ether (MTBE), 1,2-dichloroethane (1,2-DCA), and ethylene di-bromide (EDB). The groundwater flow direction was calculated as flowing towards the north at a gradient of approximately 0.0014 feet per foot (ft/ft). Grab-groundwater sample results collected from the twelve temporary borings were reported as below the laboratory method detection limit concentration of 0.50 ug/l for MTBE, 1,2-DCA and EDB. TPHd, TPHg, and BTEX compounds were reported in groundwater samples collected from several soil boring locations (see Table 1), with the highest concentrations being reported in soil borings B5 and B6 situated about 20 feet downgradient from the former UST excavation. The only analyte reported above the method detection limit concentration in the grab-groundwater sample collected from boring B3, the soil boring situated adjacent to the former UST excavation, was TPHd at a concentration of 0.050 mg/l. Based on these results, it was concluded that impacts to groundwater appeared to be limited to the immediate vicinity of the former UST excavation and area immediately north. In March 2004, the case was recommended for closure by the Santa Clara Valley Water District (SCVWD) to the Regional Water Quality Control Board – San Francisco Bay Region (RWQCB). The RWQCB did not concur with the SCVWD closure recommendation. The RWQCB's opinion was that diesel concentrations in groundwater may be indicative of free product, and there is a potential for indoor air exposure by the building occupants. In November 2004, Geocon collected soil vapor and grab-groundwater samples from two borings (B5b and B6b) located near borings B-5 and B-6, the borings where the highest contaminant concentrations were reported during the August/September 2003 investigation. The results of the November 2004 investigation indicated that TPHg concentrations in the immediate vicinity of boring B5 increased from 0.090 to 0.590 mg/l, and TPHd concentrations increased from 180 to 270 mg/l. TPHd concentrations likewise decreased near boring B6 from 100 to 4.5 mg/l. TPHg was reported as non-detect near B6 during the August/September 2003 and November 2004 investigations. The Johnson and Ettinger (J&E) Soil Gas Model was used to evaluate the results of soil gas samples collected near borings B5 and B6 during the November 2004 field investigation. Results of the J&E Soil Gas Model were that residual contaminants in subsurface soil gas do not pose an unacceptable risk to indoor air exposure, and Geocon again recommended that the RWQCB consider closing the site as a low risk groundwater case. The request for case closure was apparently rejected by the RWQCB and on March 3, 2009, the DEH issued a letter requesting that a workplan be prepared to conduct additional assessment at the site. The DEH letter stated the additional assessment should include the construction of a minimum of three monitoring wells to define the geometry of the contaminant plume.

Site History:	

In 1998, SCS Engineers conducted a Phase I Environmental Site Assessment (ESA), a geophysical survey, and a Phase II subsurface investigation at the Site (SCS Engineers, 1998). Findings of ESA indicated the following:
• The site had been used as a Mack Truck fueling and service station from 1970 to at least 1976;
• Three underground storage tanks (USTs) were removed from the site in 1976;
• Information regarding the contents of the former USTs, and results of confirmation soil and groundwater samples was not available in regulatory agency files; and
• Information reported in a 1990 ESA conducted by Level One indicated that "a potential vent pipe connected to a UST" was identified along the northeast property boundary.
Based on the findings of the 1998 Phase I ESA, SCS Engineers conducted a geophysical survey and Phase II subsurface investigation at the site. Presumably, the investigations were conducted to identify whether any USTs were still present beneath the site and identify the known former UST excavation area(s), as well as assess whether subsurface soil had been impacted by the contents of the former USTs.

Four soil borings were advanced during the SCS Engineers Phase II investigation. Three soil borings were located in the immediate area where SCS Engineers identified the three former USTs, and one additional boring was placed adjacent to the area where Level One had identified a vent pipe. Soil samples were collected at depths of three and six feet from each soil boring location, however, only the six-foot soil samples were submitted for laboratory analysis. The six-foot soil samples were analyzed for total petroleum hydrocarbons as gasoline (TPHg), diesel (TPHd), benzene, toluene, ethylbenzene, xylenes (BTEX), and total oil and grease (TOG). Analytical laboratory results for the soil samples were reported as below laboratory method detection limit concentrations for all analytes, except TPHd., which was reported in the six-foot soil samples submitted from two of the three soil borings situated in the immediate area of the three known former USTs, as well as the six-foot sample collected from the soil boring placed near the area identified as having a vent pipe. The reported TPHd concentrations ranged from 1.2 milligrams per kilogram (mg/kg) to 7.0 mg/kg (SCS Engineers (b), 1998).

In August 1998, a preliminary foundation investigation was conducted for the planned development of the site as a hotel. Four soil borings were advanced for lithologic and geotechnical analysis. Field observations during the geotechnical investigation indicated that staining and petroleum odors were present in subsurface soils beneath the site, however, no soil samples were collected for chemical analysis during this investigation (Donald Banta & Associates, 1998).

In March 1999, during site development for the current occupant (Sierra Suites Hotel), impacted soil was encountered during excavation for the courtyard pool. The impacted area was over-excavated and approximately 45,110 gallons of groundwater was pumped from the excavation and disposed offsite. Four confirmation sidewall soil samples were collected at a depth of seven feet around the perimeter of the excavation, and two grab groundwater samples were collected from the excavation prior to and after groundwater removal. One grab-groundwater was collected at a depth of 8.5 feet prior to groundwater removal, and one sample was collected from a depth of 13.5 feet after groundwater had been pumped from the excavation.

The sidewall soil samples and groundwater samples were analyzed for TPHd, TPHg and BTEX. The groundwater samples were further analyzed for total lead. Analytical laboratory results of the soil samples were reported as below method detection limit concentrations for all target compounds, except TPHd, which was reported at concentrations ranging from 1.2 to 29 milligrams per kilogram (mg/kg) in all four sidewall soil samples. One grab-groundwater sample was collected from the UST excavation prior to the removal of contaminated groundwater from the open pit. TPHd, TPHg, and benzene were reported at concentrations of 1.1 milligrams per liter (mg/l), 0.67 mg/l, and 180 micrograms per liter (ug/l) in the grab-groundwater samples collected prior to pumping. A second grab-groundwater sample was collected after 45,110 gallons of groundwater had been removed from the excavation. Following groundwater pumping, TPHd, TPHg, and benzene were reported at concentrations of 110 mg/l, 2.0 mg/l and 550 ug/l, respectively (SCS Engineers(c), 1999). Detectable concentrations of toluene, ethylbenzene and total xylenes were also reported in both grab-groundwater samples, however the reported concentrations were all below their respective maximum contaminant levels (MCLs).
In August/September 2003, Geocon conducted a limited grab-groundwater investigation at the site. The investigation included the advancement of twelve boreholes (B1 to B12) to approximately 16 feet (Figure 2). Each boring was completed as a temporary well point for the purpose of calculating the

shallow groundwater flow direction and gradient beneath the site. Grab-groundwater samples were collected from each boring and submitted for laboratory analysis. The grab-groundwater samples were analyzed for TPHd, TPHg, BTEX, methyl tert butyl ether (MTBE), 1,2-dichloroethane (1,2-DCA), and ethylene di-bromide (EDB). The groundwater flow direction was calculated as flowing towards the north at a gradient of approximately 0.0014 feet per foot (ft/ft).

Grab-groundwater sample results collected from the twelve temporary borings were reported as below the laboratory method detection limit concentration of 0.50 ug/l for MTBE, 1,2-DCA and EDB. TPHd, TPHg, and BTEX compounds were reported in groundwater samples collected from several soil boring locations (see Table 1), with the highest concentrations being reported in soil borings B5 and B6 situated about 20 feet downgradient from the former UST excavation. The only analyte reported above the method detection limit concentration in the grab-groundwater sample collected from boring B3, the soil boring situated adjacent to the former UST excavation, was TPHd at a concentration of 0.050 mg/l.
Based on these results, it was concluded that impacts to groundwater appeared to be limited to the immediate vicinity of the former UST excavation and area immediately north. In March 2004, the case was recommended for closure by the Santa Clara Valley Water District (SCVWD) to the Regional Water Quality Control Board - San Francisco Bay Region (RWQCB). The RWQCB did not concur with the SCVWD closure recommendation. The RWQCB's opinion was that
diesel concentrations in groundwater may be indicative of free product, and there is a potential for indoor air exposure by the building occupants.

In November 2004, Geocon collected soil vapor and grab-groundwater samples from two borings (B5b and B6b) located near borings B-5 and B-6, the borings where the highest contaminant concentrations were reported during the August/September 2003 investigation. The results of the November 2004 investigation indicated that TPHg concentrations in the immediate vicinity of boring B5 increased from 0.090 to 0.590 mg/l, and TPHd concentrations increased from 180 to 270 mg/l. TPHd concentrations likewise decreased near boring B6 from 100 to 4.5 mg/l. TPHg was reported as non-detect near B6 during the August/September 2003 and November 2004 investigations.
The Johnson and Ettinger (J&E) Soil Gas Model was used to evaluate the results of soil gas samples collected near borings B5 and B6 during the November 2004 field investigation. Results of the J&E Soil Gas Model were that residual contaminants in subsurface soil gas do not pose an unacceptable risk to indoor air exposure, and Geocon again recommended that the RWQCB consider closing the site as a low risk groundwater case. The request for case closure was apparently rejected by the RWQCB and on March 3, 2009, the DEH issued a letter requesting that a workplan be prepared to conduct additional assessment at the site. The DEH letter stated the additional assessment should include the construction of a minimum of three monitoring wells to define the geometry of the contaminant plume.

Waste Code: 352
Waste Code Desc: Other organic solids

Waste Code: 512
Waste Code Desc: Other empty containers 30 gallons or more

Waste Code: 741
Waste Code Desc: Liquids with halogenated organic compounds > 1000 mg/l

Waste Code: 791
Waste Code Desc: Liquids with pH < 2

Waste Code: D001
Waste Code Desc: IGNITABLE WASTE

Waste Code: D002
Waste Code Desc: CORROSIVE WASTE

Waste Code: D034
Waste Code Desc: HEXACHLOROETHANE

Waste Code: D035
Waste Code Desc: METHYL ETHYL KETONE

Waste Code: D039
Waste Code Desc: TETRACHLOROETHYLENE

Waste Code: F002
Waste Code Desc: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Code Desc: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Code Desc: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: U210
Waste Code Desc: ETHENE, TETRACHLORO- (OR) TETRACHLOROETHYLENE

Waste Code: U220
Waste Code Desc: BENZENE, METHYL- (OR) TOLUENE

Waste Code: U226
Waste Code Desc: ETHANE, 1,1,1-TRICHLORO- (OR) METHYL CHLOROFORM

Waste Code: U227
Waste Code Desc: 1,1,2-TRICHLOROETHANE (OR) ETHANE, 1,1,2-TRICHLORO-

Waste Code: U228
Waste Code Desc: ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

Hazardous Waste Handler Details

Site History:	

Site is under Water Board Order No. 91-138. PROJECT OVERVIEW On April 2, 2001, Van Waters & Rogers, Inc. became Vopak USA Inc. (Vopak), which eventually became Univar Solutions. The principal operations at the site, which began in 1976, include bulk chemical transfer between tank trucks, railroad tank cars, and chemical blending and packaging. In the past, 37 underground storage tanks (USTs) have been used to store chlorinated and petroleum hydrocarbons. All 37 USTs have since been removed and currently, chemicals are stored in aboveground storage tanks (ASTs). Releases were associated with underground storage tanks that were located adjacent to the covered dock and an above ground storage tank on the dock. All these tanks were removed, and above ground storage tanks were installed. The groundwater extraction treatment system (GWETS) operated from 1986 to 2020. In 2021, the Water Board concurred with curtailment of the GWETS. The effluent was discharged to a storm sewer inlet located near the northern site boundary. The treated water was eventually discharged to the Guadalupe River under an NPDES permit. In November 2007, Univar implemented an expanded soil vapor extraction system (SVE) which was shut down in 2016/2017. The SVE operated from 1993 to 2016. In 2017, the Water Board concurred with curtailment of the SVE. In 2021, Univar removed the above ground storage tanks under jurisdiction of the San Jose Fire Department, as part of the facility closure. Univar sold the property to Duke Realty in 2020. Since, the property transfer, Univar has implemented a new groundwater treatment remedy (2020), and soil remedy (2021). These are outlined in the 9/21/2021 Interim Remedial Action Plan (IRA) and 3/23/2021 Remedial Action Plan (RAP). Duke Realty will implement an active vapor intrusion mitigation system, sub-slab depressurization system (SSDS), and hot spot soil removal in the warehouse. Prior to Duke Realty's tenant occupation, monitoring of the vapor intrusion mitigation system and testing of indoor air will be conducted. Duke Realty will lease the property to a new commercial tenant and will remodel the existing warehouse and attached office. Univar will continue to monitor and sample groundwater monitoring wells and soil vapor probes to evaluate the effectiveness of the new remedies implemented in 2020 and 2021. Duke Realty will perform long-term monitoring of the SSDS. Historical Site Characterization Subsurface investigations began at the site in late 1982 at the request of the RWQCB. Site characterizations have identified two water-bearing zones, referred to as the "A-" and "B-" aquifers. The A-aquifer, which is present between depths of 10 and 45 feet below ground surface (bgs), has been further subdivided into the A-1 and A-2 zones. The A-1 zone is characterized by silty clays and clays. The underlying A-2 zone consists of sandy clays and clayey sands. The B-aquifer, which extends to about 90 feet below grade and consists of permeable sands and gravels, has been subdivided into the B-1 and B-2 zones. The B-1 and B-2 zones are similar but are separated by a thin stratum of silty clay and clayey silt. By February 2002, 43 wells and 2 deep exploratory borings have been installed at the site, 36 of which remain active. Historical ground water monitoring data have shown the past and/or continued presence of a number of dissolved organic compounds in soil and in the A- and B-aquifer wells. These compounds may be categorized as either volatile organic compounds (VOCs) or soluble oxygenated compounds, such as alcohols, glycols, and ketones. After several phases of subsurface characterization, a remedial investigation/feasibility study (RI/FS) report was submitted by Geosystem Consultants, Inc. (Geosystem, February 13, 1991) to the U.S. Environmental

Protection Agency (EPA) and the RWQCB. In the RI/FS, seven compounds were selected as chemicals of concern (COCs) based on frequency of detection, maximum concentration, and health risk potential. The list of COCs included: • Acetone • 1,1-Dichloroethene (1,1-DCE) • cis-1,2-Dichloethene (cis-1,2-DCE) • Methylene chloride • Tetrachloroethene (PCE) • Trichloroethene (TCE) • Vinyl chloride An eighth chemical, 1,1,1-trichloroethane (1,1,1-TCA), was added in the final list for target cleanup because of its designation as an “indicator chemical.” Other indicator chemicals were PCE and cis-1,2-DCE. These indicator chemicals have been used to simplify data evaluation and interpretation. Recent data, however, have demonstrated that 1,1,1-TCA concentrations have been reduced to levels which are no longer of concern.

PROJECT OVERVIEW
On April 2, 2001, Van Waters & Rogers, Inc. became Vopak USA Inc. (Vopak), which eventually became Univar Solutions. The principal operations at the site, which began in 1976, include bulk chemical transfer between tank trucks, railroad tank cars, and chemical blending and packaging. In the past, 37 underground storage tanks (USTs) have been used to store chlorinated and petroleum hydrocarbons. All 37 USTs have since been removed and currently, chemicals are stored in aboveground storage tanks (ASTs). Releases were associated with underground storage tanks that were located adjacent to the covered dock and an above ground storage tank on the dock. All these tanks were removed, and above ground storage tanks were installed.

The groundwater extraction treatment system (GWETS) operated from 1986 to 2020. In 2021, the Water Board concurred with curtailment of the GWETS. The effluent was discharged to a storm sewer inlet located near the northern site boundary. The treated water was eventually discharged to the Guadalupe River under an NPDES permit. In November 2007, Univar implemented an expanded soil vapor extraction system (SVE) which was shut down in 2016/2017. The SVE operated from 1993 to 2016. In 2017, the Water Board concurred with curtailment of the SVE. In 2021, Univar removed the above ground storage tanks under jurisdiction of the San Jose Fire Department, as part of the facility closure.

Univar sold the property to Duke Realty in 2020. Since, the property transfer, Univar has implemented a new groundwater treatment remedy (2020), and soil remedy (2021). These are outlined in the 9/21/2021 Interim Remedial Action Plan (IRA) and 3/23/2021 Remedial Action Plan (RAP). Duke Realty will implement an active vapor intrusion mitigation system, sub-slab depressurization system (SSDS), and hot spot soil removal in the warehouse. Prior to Duke Realty's tenant occupation, monitoring of the vapor intrusion mitigation system and testing of indoor air will be conducted.
Duke Realty will lease the property to a new commercial tenant and will remodel the existing warehouse and attached office.

Univar will continue to monitor and sample groundwater monitoring wells and soil vapor probes to evaluate the effectiveness of the new remedies implemented in 2020 and 2021. Duke Realty will perform long-term monitoring of the SSDS.

Historical Site Characterization
Subsurface investigations began at the site in late 1982 at the request of the RWQCB. Site characterizations have identified two water-bearing zones, referred to as the "A-" and "B-" aquifers. The A-aquifer, which is present between depths of 10 and 45 feet below ground surface (bgs), has been further subdivided into the A-1 and A-2 zones. The A-1 zone is characterized by silty clays and clays. The underlying A-2 zone consists of sandy clays and clayey sands. The B-aquifer, which extends to about 90 feet below grade and consists of permeable sands and gravels, has been subdivided into the B-1 and B-2 zones. The B-1 and B-2 zones are similar but are separated by a thin stratum of silty clay and clayey silt.
By February 2002, 43 wells and 2 deep exploratory borings have been installed at the site, 36 of which remain active. Historical ground water monitoring data have shown the past and/or continued presence of a number of dissolved organic compounds in soil and in the A- and B-aquifer wells. These compounds may be categorized as either volatile organic compounds (VOCs) or soluble oxygenated compounds, such as alcohols, glycols, and ketones. After several phases of subsurface characterization, a remedial investigation/feasibility study (RI/FS) report was submitted by Geosystem Consultants, Inc. (Geosystem, February 13, 1991) to the U.S. Environmental Protection Agency (EPA) and the RWQCB. In the RI/FS, seven compounds were selected as chemicals of concern (COCs) based on frequency of detection, maximum concentration, and health risk potential. The list of COCs included:
• Acetone
• 1,1-Dichloroethene (1,1-DCE)
• cis-1,2-Dichloethene (cis-1,2-DCE)
• Methylene chloride
• Tetrachloroethene (PCE)
• Trichloroethene (TCE)
• Vinyl chloride
An eighth chemical, 1,1,1-trichloroethane (1,1,1-TCA), was added in the final list for target cleanup because of its designation as an "indicator chemical." Other indicator chemicals were PCE and cis-1,2-DCE. These indicator chemicals have been used to simplify data evaluation and interpretation. Recent data, however, have demonstrated that 1,1,1-TCA concentrations have been reduced to levels which are no longer of concern.

GeoTracker Search - Cleanup Action Report

Action Type:	SOIL VAPOR EXTRACTION (SVE)
Begin Date:	6/6/1993
End Date:	1/1/2010
Phase:	Water
Contaminant Mass Removed:	
Description:	Pursuant to RWQCB Order No. 91-138, an SVE system was installed in the summer of 1993 and began operation in June of 1993 to remediate VOC-impacted soils. The SVE system consisted of shallow SVE piping installed at depths of less than 3 feet bgs in the loading dock area, railroad spur area, and former UST farm area (Figure 3). After installation of the soil vapor collection piping, the areas were capped to prevent water from infiltrating and to increase the zone of SVE influence. The SVE system is capable of extracting soil vapor at the rate of

approximately 400 standard cubic feet per minute (scfm). The extracted soil vapor is treated using GAC under permit from the BAAQMD. Operational data for the SVE system is presented in Table 3 including hours of operation and targeted areas.

Action Type: PUMP & TREAT (P&T) GROUNDWATER
Begin Date: 1/1/1986
End Date: 1/1/2010
Phase: Water
Contaminant Mass Removed:
Description:

Action Type: EXCAVATION
Begin Date: 7/1/1997
End Date: 7/30/1997
Phase: Soil
Contaminant Mass Removed:
Description: Removal of USTs and Surrounding Backfill During April through July 1997, all 37 USTs were removed from the site (VW&R, September 26, 1997). The former locations of the tanks are shown in Figure 2. Prior to initiating tank removal, one monitoring well (Well 1) and three extraction wells (Wells 6, 16, and 41) were properly abandoned. The three horizontal SVE wells, Wells HB-1, HB-2, and HB-3 were also decommissioned as part of the UST removal. Prior to the removal of the USTs, a risk assessment was performed to assess the acceptability of placing the excavated soil back into the excavation. Based on the results of the risk assessment (HLA, October 23, 1996), the RWQCB approved the reuse of excavated soil at the site. During tank removal, the backfill material was removed and treated on site by aeration. The treated backfill was placed in the excavation prior to restoring the site. Currently, Vopak operates the chemical distribution facility using aboveground storage tanks.

Action Type: Cleanup Action
Action: Excavation
Action Date: 7/1/1997
Received Issue Date:
Doc Link:
Title Description Comments:

Removal of USTs and Surrounding Backfill During April through July 1997, all 37 USTs were removed from the site (VW&R, September 26, 1997). The former locations of the tanks are shown in Figure 2. Prior to initiating tank removal, one monitoring well (Well 1) and three extraction wells (Wells 6, 16, and 41) were properly abandoned. The three horizontal SVE wells, Wells HB-1, HB-2, and HB-3 were also decommissioned as part of the UST removal. Prior to the removal of the USTs, a risk assessment was performed to assess the acceptability of placing the excavated soil back into the excavation. Based on the results of the risk assessment (HLA, October 23, 1996), the RWQCB approved the reuse of excavated soil at the site. During tank removal, the backfill material was removed and treated on site by aeration. The treated backfill was placed in the excavation prior to restoring the site. Currently, Vopak operates the chemical distribution facility using aboveground storage tanks.

Action Type: Cleanup Action
Action: Soil Vapor Extraction (SVE)
Action Date: 6/6/1993
Received Issue Date:
Doc Link:
Title Description Comments:

Pursuant to RWQCB Order No. 91-138, an SVE system was installed in the summer of 1993 and began operation in June of 1993 to remediate VOC-impacted soils. The SVE system consisted of shallow SVE piping installed at depths of less than 3 feet bgs in the loading dock area, railroad spur area, and former UST farm area (Figure 3). After installation of the soil vapor collection piping, the areas were capped to prevent water from infiltrating and to increase the zone of SVE influence. The SVE system is capable of extracting soil vapor at the rate of approximately 400 standard cubic feet per minute (scfm). The extracted soil vapor is treated using GAC under permit from the BAAQMD. Operational data for the SVE system is presented in Table 3 including hours of operation and targeted areas.

Envirostor ID: 43500006
Site History:

Prior to 1975, the site was used for agricultural purposes. Van Waters & Rogers (VW&R) was a commercial chemical storage, handling and distribution

facility that has been in operation at the site since 1976. VW&R became Vopak USA Inc. (Vopak) on April 2, 2001. Vopak operates the site as a chemical distribution company.

Site History:	

This site is occupied by the M.E. Fox beverage distribution facility and until recently has had an operating fuel dispensing facility with underground storage tanks (USTs). Most recently, one 8,000-gallon gasoline, one 2,000-gallon gasoline, and one 6,000-gallon diesel UST were present at the site. These USTs were installed in January 1990 and reportedly were removed on June 14, 2004. Previous tank complex at the site was located approximately 65 feet southeast of the current UST area. The former UST(one -5,000-gallon gasoline, one 2,000-gallon gasoline and one 2, 0000-gallon diesel) were removed in November 1989. Two ground water monitoring wellls were installed at the site in 1990 (OW-1 and OW-2), three additional monitoring wells were installed at the site in 1994 (MW-1, MW-2), and (MW-3). These five wells are located east and southeast (up-gradient) of the current UST area. Ground water monitoring continued at the site until at least April 1996; the case was closed in February 1997. Subsequently, based in a California Regional Water Quality Control Board (CRWQCB) letter dated December 20, 2002, a one time evaluation of shallow ground water beneath the site for the presence of MTBE was required. On April 8, 2003, three borings (EB-1, EB-2, and EB-3) were advanced in the down-gradient groundwater flow direction from the current and former tank locations. MTBE at concentrations up to 3, 100 parts per billion (ppb) and tertiary-butyl alcohol (TBA) at concentrations up to 2,000 ppb were detected in the ground water samples collected from the borings. 2003 – In April, 3 soil borings (EB1 through EB3) were advanced downgradient of the existing USTs onsite to depths of 16-20 feet below the ground surface (ft bgs) for the collection of grab groundwater samples. Groundwater was encountered between 12-13 ft bgs. The groundwater samples were analyzed for fuel oxygenates and reported to contain maximum concentrations of 3,100 ppb MtBE and 2,600 ppb Tert Butyl Alcohol (TBA) in boring EB1. Boring EB1 was located adjacent to the existing USTs and dispenser. In October, 6 soil borings (EB4 through EB9) were installed onsite to approximately 15 ft bgs. Boring EB8 was only advanced to 8 ft bgs. Groundwater was encountered between 12-13 ft bgs, except in boring EB8 where it was encountered at 8 ft bgs. 6 soil samples were collected from borings EB7 through EB9 and reported to contain maximum concentrations of 61 ppm TPHd (at 12 feet in EB9), 0.12 ppm MtBE and 0.31 ppm TBA (at 12 feet in EB7). These borings were located around the existing USTs. Grab groundwater samples were collected from borings EB4 through EB6 reported to contain maximum concentrations of 100 ppb TPHg and 100 ppb MtBE in boring EB5 located downgradient of previous borings EB1 through EB3. The existing wells, except for well MW2, were sampled at this time and reported to contain maximum concentrations of 87 ppb TPHg and 1.4 ppb MtBE. All other constituents were not reported to be present above the laboratory reporting limits. Groundwater monitoring was not continued. 2004 – In June, 4 soil borings (EB7 through EB10) were advanced to 15 ft bgs on the property north of the site. Three of the soil borings were named the same as previous borings advanced onsite (EB7 through EB9) Groundwater was encountered between 10.5-13 ft bgs. Grab groundwater samples were collected from each boring and reported to contain maximum concentrations of 37,000 ppb TPHg, 2,800 ppb Ethylbenzene, 550 ppb Xylenes, and 93 ppb MtBE in boring EB10 located downgradient of the former USTs. In July, the USTs, associated piping and dispensers were removed from the site. 6 soil samples (SS1 through SS6 were collected from 6-7 ft bgs at the soil/water interface in the UST excavation. Samples were analyzed for TPHg, TPH as Diesel (TPHd), Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX), MtBE, and Volatile Organic Compounds (VOCs) by EPA Method No. 8260B; and were reportedto have only one detection of 8.4 ppm MtBE in one soil sample. A grab groundwater sample was collected from the excavation and reported to contain 1,500 ppb TPHg, 250 ppb TPHd, 3,500 ppb Ethanol, 1 ppb Naphthalene, 82 ppb Benzene, 540 ppb Toluene, 49 ppb Ethylbenzene, 450 ppb Xylenes, and 41 ppb MtBE. 2005 – The responsible party was requested to install additional wells on the properties to the north of the site. They were not able to secure access agreements to complete the work. 2011 – A Site Conceptual Model was completed for the site. It states that the site is underlain by at least 21.5 feet of clay with thick discontinuous interbeds of silt, silty sand and gravel. Clay comprises the predominant water-bearing unit beneath the former UST areas. It also states that there is likely an upward vertical hydraulic gradient based on depth to initial groundwater (10-13 ft bgs) during drilling and the shallower depth to groundwater measured in onsite wells (average 6-7 ft bgs). 2012 – In June, 3 soil vapor samples (SV1 through SVE) were collected from 5 ft bgs offsite and downgradient of the former UST locations. The samples were only reported to have detectable concentrations of MtBE in SV1 And SV2 at a maximum concentration of 470 µg/m3. Benzene and TPHg were not reported to be present in any of the samples above the laboratory reporting limits. The sample collected at SV3 was not reported to have concentrations

of the Constituents of Concern present above the laboratory reporting limits. The maximum MtBE concentration was used to calculate the incremental Risk from Vapor Intrusion to Indoor Air, Carcinogen (5.7E-08); and the Hazard Quotient from Vapor Intrusion to Indoor Air, Non-carcinogen (1.7E-04). Also at this time, the monitoring wells onsite were sampled and were not reported to have concentrations of TPHg, BTEX, MtBE and TBA present above the laboratory reporting limits. 2013 – Between February and May, 5 Geoprobe borings (GP1 through GP5) and 1 hand auger boring were advanced on and offsite. Groundwater was encountered between 12-15 ft bgs and was reported to rapidly rise to 7-8 ft bgs. Grab groundwater samples were collected from each boring and reported to contain a maximum concentration of 33 ppb MtBE, which was the only constituent reported to be present above the laboratory reporting limits in the samples collected. 3 soil samples were collected from borings GP1 through GP3 located onsite at a depth of 8 ft bgs. These samples were analyzed for Naphthalene, which was not reported to be present above the laboratory reporting limit.

Site History:

This site is occupied by the M.E. Fox beverage distribution facility and until recently has had an operating fuel dispensing facility with underground storage tanks (USTs). Most recently, one 8,000-gallon gasoline, one 2,000-gallon gasoline, and one 6,000-gallon diesel UST were present at the site. These USTs were installed in January 1990 and reportedly were removed on June 14, 2004.

Previous tank complex at the site was located approximately 65 feet southeast of the current UST area. The former UST(one -5,000-gallon gasoline, one 2,000-gallon gasoline and one 2, 0000-gallon diesel) were removed in November 1989. Two ground water monitoring wellls were installed at the site in 1990 (OW-1 and OW-2), three additional monitoring wells were installed at the site in 1994 (MW-1, MW-2), and (MW-3). These five wells are located east and southeast (up-gradient) of the current UST area. Ground water monitoring continued at the site until at least April 1996; the case was closed in February 1997.

Subsequently, based in a California Regional Water Quality Control Board (CRWQCB) letter dated December 20, 2002, a one time evaluation of shallow ground water beneath the site for the presence of MTBE was required. On April 8, 2003, three borings (EB-1, EB-2, and EB-3) were advanced in the down-gradient groundwater flow direction from the current and former tank locations. MTBE at concentrations up to 3, 100 parts per billion (ppb) and tertiary-butyl alcohol (TBA) at concentrations up to 2,000 ppb were detected in the ground water samples collected from the borings.

2003 - In April, 3 soil borings (EB1 through EB3) were advanced downgradient of the existing USTs onsite to depths of 16-20 feet below the ground surface (ft bgs) for the collection of grab groundwater samples. Groundwater was encountered between 12-13 ft bgs. The groundwater samples were analyzed for fuel oxygenates and reported to contain maximum concentrations of 3,100 ppb MtBE and 2,600 ppb Tert Butyl Alcohol (TBA) in boring EB1. Boring EB1 was located adjacent to the existing USTs and dispenser.

In October, 6 soil borings (EB4 through EB9) were installed onsite to approximately 15 ft bgs. Boring EB8 was only advanced to 8 ft bgs. Groundwater was encountered between 12-13 ft bgs, except in boring EB8 where it was encountered at 8 ft bgs. 6 soil samples were collected from borings EB7 through EB9 and reported to contain maximum concentrations of 61 ppm TPHd (at 12 feet in EB9), 0.12 ppm MtBE and 0.31 ppm TBA (at 12 feet in EB7). These borings were located around the existing USTs.

Grab groundwater samples were collected from borings EB4 through EB6 reported to contain maximum concentrations of 100 ppb TPHg and 100 ppb MtBE in boring EB5 located downgradient of previous borings EB1 through EB3.

The existing wells, except for well MW2, were sampled at this time and reported to contain maximum concentrations of 87 ppb TPHg and 1.4 ppb MtBE. All other constituents were not reported to be present above the laboratory reporting limits. Groundwater monitoring was not continued.

2004 - In June, 4 soil borings (EB7 through EB10) were advanced to 15 ft bgs on the property north of the site. Three of the soil borings were named the same as previous borings advanced onsite (EB7 through EB9) Groundwater was encountered between 10.5-13 ft bgs. Grab groundwater samples were collected from each boring and reported to contain maximum concentrations of 37,000 ppb TPHg, 2,800 ppb Ethylbenzene, 550 ppb Xylenes, and 93 ppb MtBE in boring EB10 located downgradient of the former USTs.

In July, the USTs, associated piping and dispensers were removed from the site. 6 soil samples (SS1 through SS6 were collected from 6-7 ft bgs at the soil/water interface in the UST excavation. Samples were analyzed for TPHg, TPH as Diesel (TPHd), Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX), MtBE, and Volatile Organic Compounds (VOCs) by EPA Method No. 8260B; and were reported to have only one detection of 8.4 ppm MtBE in one soil sample.

A grab groundwater sample was collected from the excavation and reported to contain 1,500 ppb TPHg, 250 ppb TPHd, 3,500 ppb Ethanol, 1 ppb Naphthalene, 82 ppb Benzene, 540 ppb Toluene, 49 ppb Ethylbenzene, 450 ppb Xylenes, and 41 ppb MtBE.

2005 - The responsible party was requested to install additional wells on the properties to the north of the site. They were not able to secure access agreements to complete the work.

2011 - A Site Conceptual Model was completed for the site. It states that the site is underlain by at least 21.5 feet of clay with thick discontinuous interbeds of silt, silty sand and gravel. Clay comprises the predominant water-bearing unit beneath the former UST areas. It also states that there is likely an upward vertical hydraulic gradient based on depth to initial groundwater (10-13 ft bgs) during drilling and the shallower depth to groundwater measured in onsite wells (average 6-7 ft bgs).

2012 - In June, 3 soil vapor samples (SV1 through SVE) were collected from 5 ft bgs offsite and downgradient of the former UST locations. The samples were only reported to have detectable concentrations of MtBE in SV1 And SV2 at a maximum concentration of 470 µg/m3. Benzene and TPHg were not reported to be present in any of the samples above the laboratory reporting limits. The sample collected at SV3 was not reported to have concentrations of the Constituents of Concern present above the laboratory reporting limits.

The maximum MtBE concentration was used to calculate the incremental Risk from Vapor Intrusion to Indoor Air, Carcinogen (5.7E-08); and the Hazard Quotient from Vapor Intrusion to Indoor Air, Non-carcinogen (1.7E-04).

Also at this time, the monitoring wells onsite were sampled and were not reported to have concentrations of TPHg, BTEX, MtBE and TBA present above the laboratory reporting limits.

2013 - Between February and May, 5 Geoprobe borings (GP1 through GP5) and 1 hand auger boring were advanced on and offsite. Groundwater was

encountered between 12-15 ft bgs and was reported to rapidly rise to 7-8 ft bgs. Grab groundwater samples were collected from each boring and reported to contain a maximum concentration of 33 ppb MtBE, which was the only constituent reported to be present above the laboratory reporting limits in the samples collected.

3 soil samples were collected from borings GP1 through GP3 located onsite at a depth of 8 ft bgs. These samples were analyzed for Naphthalene, which was not reported to be present above the laboratory reporting limit.

Claim No:	19484
Claim Status:	Active
A2022 Congressional District:	17
A2022 Senate District:	10
Site History:	

A five-story office building is currently occupied at the Site. The Site was operated as a commercial fueling facility from 1959 to 1982. During 1982, five 10,000-gallon underground storage tanks (USTs) were removed. Sixteen wells, including one extraction (E-1) and 15 monitoring wells (MW-1 through MW-7, MW-1R, MW-5R, MW-6R, MW-8B, MW-A, MW-B, MW-C, and 1) were installed as part of the groundwater investigation activities. As part of the routine groundwater monitoring activities, 7 of the 16 wells, including MW-1, MW-1R, MW-4, MW-A, MW-B, MW-C,and E-1, are monitored on a semi-annual basis during the first and third quarters.

Claim No:
Claim Status:
A2022 Assembly District: 24
A2022 Congressional District: 17
A2022 Senate District: 10
Site History:

Former automotive dealership with vehicle maintenance services from 1970 to 2008. It was used by a community college as an automotive training center from 2008-2010 and is currently vacant. There is a closed LUFT case for this site. The hydraulic lifts were removed from the site in June and July 2012. Soil and groundwater were found to be impacted by hydraulic oil. A clarifier remains that needs to be removed.

File Location:	Regional Board
Claim No:	
Claim Status:	
A2022 Assembly District:	24
A2022 Congressional District:	17
A2022 Senate District:	10
Site History:	

VOC source area was excavated and soil with more than 1mg/kg of VOCs was removed. Some limited areas of soil exceeding 1 mg/kg VOCs (approximately 1.3 mg/kg)were left in place due to the need to maintain the structural integrity of the building. Groundwater is being monitored. Soil vapor samples are to be collected to evaluate vapor intrusion risk.
