The Following Corrections Shall Be Made:

SHEET	CODE/SECTION	NO.	
			This Plan Correction Directive is issued following review of sheets 1 & 2 dated 3-12 and 3-13-87.
2	UBC/3303(c)	1	Type of Lock or Latch. Exit doors shall be operable from the inside without the use of a key or any special knowledge or effort. Exceptions: (1) This requirement shall not apply to exterior exit doors in a Group B Occupancy where there is a readily visible, durable sign on or adjacent to the door stating "THIS DOOR TO REMAIN UNLOCKED DURING BUSINESS HOURS." The sign shall be in letters not less than 1-inch high on a contrasting background. The locking device shall be of a type that will be readily distinguishable as locked. The use of this exception may be revoked by the building official for due cause. (2) Exit doors from buildings or rooms having an occupant load of 10 or less may be provided with a night latch, dead bolt or security chain, provided such devices are openable from the inside without the use of a key, special knowledge or effort and mounted at a height not to exceed 48-inches above the finished floor.
T19(596.1		2	Provide 2-A:10-B:C rated fire extinguisher(s) mounted within 75 feet of travel of all areas of building or tenant space.

The Following Corrections Shall Be Made:

SHEET	CODE/SECTION	NO.	
	SJFC/~~10.301(g)~~ 10.309 SJFC 10.309	3	Alter sprinkler system as necessitated by new partitions, floors and ceilings. Design shall be adequate for intended use and must conform to the most recent NFPA Pamphlet 13. Alteration of sprinkler system plans are to be submitted by the installing contractor to this office for approval and permit. Alteration to existing systems that raise the total number of automatic sprinkler heads to 100 or more requires the system to be supervised by a remote station alarm. No final or permit will be issued until all systems are tested and operational. Applications will be made by automatic sprinkler company ONLY.
	UBC/3312(b)	4	Exit signs shall be posted above each required exit doorway and wherever otherwise required to clearly indicate the direction of egress.
	NOTE:	5	This building is approved for a Group B-2 type occupancy ONLY. Use or storage of hazardous materials, liquids, gases and/or chemicals is not approved. See Table of UBC for exempt amounts subject to regulations of Fire Prevention Code. Submit names and amounts of any hazardous material mentioned above to this office for approval. If amounts exceed the amounts noted in Table 9A additional requirements shall be applicable.

Determination Date	Program
06/13/2024	HW - Hazardous Waste Generator

NOTES
Returned to compliance on 10/16/2024. The following hazardous waste containers were not sufficiently marked: - The 15 drums of ink containers were mostly devoid of any labeling. Two drums were found with illegible labels missing all information. - The 55 gallon drum of waste ink did not have an accumulation start date. Ensure all hazardous waste containers are properly marked with all required information.

CITATIONS
22 CCR 12 66262.34(f): California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)

06/13/2024	HW - Hazardous Waste Generator

NOTES
Returned to compliance on 10/16/2024. Facility stated that the 15 drums of waste ink containers had been accumulating since 2020. As a small quantity generator all non point of generation satellite waste must be disposed of within 180 days. Dispose of these drums within 30 days.

LEGAL DESCRIPTION

See attached legal description

DESCRIPTION

All that certain Real Property in the City of San Jose, County of Santa Clara, State of California, described as follows:

PARCEL ONE:

Parcel "A", as shown on that certain parcel Map filed for record in the Office of the Recorder of the County of Santa Clara County, State of California on September 8, 1976 in Book 379 of Maps, pages 8 and 9.

PARCEL TWO:

A non-exclusive easement for vehicular and pedestrian ingress and egress described as follows:

Commencing at the most Southerly corner of Parcel 1, as said Parcel is delineated and so designated upon that certain Map entitled, "PARCEL MAP, LANDS OF ORCHARD PROPERTIES, BEING A RESUBDIVISION OF PARCEL 3, AS SHOWN ON THAT CERTAIN PARCEL MAP RECORDED IN BOOK 316 OF MAPS AT PAGE 21, SANTA CLARA COUNTY RECORDS AND LYING ENTIRELY WITHIN THE CITY OF SAN JOSE, SANTA CLARA CO., CALIF.", filed for record March 29, 1974, and recorded in book 337 of Maps at Page 46, Records of said Santa Clara County and running thence from said Point of Commencement Northeasterly along the Southeasterly line of said Parcel 1, North 47° 36' 13" East 46.27 feet to the True Point of Beginning; thence from said True Point of Beginning North 42° 23' 47" West, 95.50 feet; thence south 47° 36' 13" West, 44.79 feet to a point on the Northeasterly line of Zanker Road as shown on said Parcel Map; thence Northwesterly along said Northeasterly line of Zanker Road North 41° 34' 13" West, 25.00 feet; thence North 47° 36' 13", East 70.43 feet; thence South 42° 23' 47" East, 120.50 feet to a point on said Southeasterly line of Parcel 1; thence Southwesterly along said Southeasterly line of Parcel 1, South 47° 36' 13" West, 26.00 feet to the True Point of Beginning.

PARCEL THREE:

A non-exclusive easement for vehicular and pedestrian ingress and egress described as follows:

Commencing at the most Southerly corner of Parcel 1, as said Parcel is delineated and so designated upon that certain Map entitled, "PARCEL MAP, LANDS OF ORCHARD PROPERTIES, BEING A RESUBDIVISION OF PARCEL 3 AS SHOWN ON THAT CERTAIN PARCEL MAP RECORDED IN BOOK 316 OF MAPS AT PAGE 21, SANTA CLARA COUNTY RECORDS AND LYING ENTIRELY WITHIN THE CITY OF SAN JOSE, SANTA CLARA CO., CALIF.", filed for record March 29, 1974, and recorded in Book 337 of Maps at Page 46, Records of said Santa Clara County and running thence from said Point of Commencement Northeasterly along the Southeasterly line of said Parcel 1 North 47° 36' 13" East, 300.27 feet to the True Point of Beginning; thence from said True Point of Beginning North 42° 23' 47" West, 329.00 feet; thence North 49° 43' 12" West, 31.34 feet to a point of curvature on the Southeasterly line of Charcot Avenue as shown upon said Parcel Map; thence Northeasterly along said Southeasterly line of Charcot Avenue on a curve to the left from a tangent bearing North 34° 43' 18" East, having a radius of 832.00 feet, through a central angle of 0° 57' 51" an arc length of 14.00 feet to a point of reverse curvature; thence continuing along said Southeasterly line of Charcot Avenue Northeasterly on a tangent curve to the right having a radius of 768.00 feet, through a central angle of 1° 34' 00" an arc length of 21.00 feet; thence South 49° 43' 12"

RECORDER'S MEMO

N

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 8/23/2025 at 4:44 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Santa Clara Area, California, Western Part
Survey Area Data: Version 13, Sep 8, 2024

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Mar 1, 2023—Sep 1, 2023

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

1.0 INTRODUCTION

Presented in this report are the results of Dames & Moore's Phase I Preliminary Site Assessment (PSA) for the Zanker-Charcot Industrial Park (site) located at the southeast corner of Zanker Road and Charcot Avenue in San Jose, California (Figure 1). The site is currently owned by RREEF-IV, Inc. The site is being investigated by AMB Institutional Realty Advisors, Inc.(AMB) for its client, AMB Western Properties Fund, who is contemplating acquisition of the property.

The subject site, a 13.56-acre industrial park, is occupied by five multi-unit single story buildings surrounded by asphalt-covered parking area. The industrial park was completed in 1977 (Hygienetics, 1992). Seventeen businesses provide an assortment of warehousing, storage and distribution services at the site (see Tenant List included as Table 1).

This PSA was performed in accordance with the objectives presented in the Consultant's Service Agreement (CSA), Exhibit B, of the Engagement Letter from AMB dated September 15, 1992. This report is subject to the provisions of the CSA which is made part hereof and which is incorporated in its entirety.

2.0 PURPOSE AND SCOPE OF SERVICES

The purpose of this PSA was to investigate past and current land use at the site to evaluate the potential presence of hazardous materials, including raw materials and/or wastes, at the site. The investigation was accomplished by, and was limited to, a review of readily available documentation of land-use history at the site for evidence of the manufacture, generation, use, storage, release, and/or disposal of hazardous materials, and a preliminary evaluation of the potential for soil and/or groundwater contamination at the site, based on available data.

The scope of services for this PSA included the following tasks:

- Review of pertinent, readily available documents and maps regarding local geologic and hydrologic conditions;

- Review of available building permit information, historical aerial photographs, summarized in Appendix B, and archival topographic maps of the site and surrounding area for information regarding historical land use;

- Review of documents provided by AMB, listed in Table 2;

- Performance of a reconnaissance of the site and immediately surrounding areas on October 12, 1992;

- Review of available federal, state, and local agency lists of: (a) known or potential hazardous waste sites or landfills, (b) sites currently under investigation for environmental violations, (c) sites which manufacture, generate, use, store, and/or dispose of hazardous materials or hazardous waste, (d) sites which have underground storage tanks (USTs), and (e) sites with recorded violations of regulations concerning USTs and hazardous materials/hazardous wastes.

- Conduct inquiries applicable to state, county and local agencies for information regarding environmental permits, violations, and other environmental records;

- Review of building information and interview of tenants to evaluate the potential for "sick building syndrome";

- Interview of agency officials and review of readily available, pertinent documents, and maps to evaluate the potential for the presence of radon;

- Performance of a limited asbestos survey which included a review of documents provided by AMB and a visual survey of the building to characterize the type, locations, and conditions of identified friable and non-friable suspect asbestos-containing materials (ACMs); and

- Preparation of this report to present our findings, conclusions, and recommendations.

3.0 PHYSICAL SETTING

3.1 SITE DESCRIPTION

The site is located in Township 6 South, Range 1 West and 1 East (Mount Diablo Base and Meridian), Sections 25 and 30, respectively in the city of San Jose, Santa Clara County, California (Figure 1). Topographic map coverage is provided by the U.S. Geological Survey (USGS) Milpitas, California 7.5 Minute Quadrangle (USGS, 1961, photorevised in 1981).

The site is located in the flat lowland area south of San Francisco Bay. This broad alluvial plain, known as the Santa Clara Valley, drains northward into the bay. To the west and east of the site are the northwest trending Santa Cruz Mountains and the Diablo Range, respectively. Elevation of the site is approximately 40 feet above mean sea level (MSL) (USGS, 1961). Surface drainage in the area follows the gentle topographic gradient of approximately 15 feet per mile to the northwest in the site vicinity. The site is located approximately 0.3 miles to the west of Coyote Creek and 1.3 miles to the east of the Guadalupe River, both of which flow toward the northwest (USGS, 1961).

3.2 GEOLOGY AND HYDROGEOLOGY

The site is located in the northern end of the Santa Clara Valley, which is part of the Coast Ranges geomorphic province. The site vicinity is underlain at depth by bedrock of the Franciscan Complex, which is Jurassic to Cretaceous in age. Even though the Franciscan Complex is fractured and faulted, it typically yields little groundwater. The Santa Clara Formation unconformably overlies the Franciscan Complex and consists of silts, clays and sands. The Santa Clara Formation is up to 1,800 feet thick and reportedly is a water-bearing unit. Overlying the Santa Clara Formation are up to 400 feet of alluvial deposits (Valley fill) that are Plio-Pleistocene and Holocene in age. The alluvial deposits are an intermixed series of laterally discontinuous clays, silts, sands and gravels. The sands and gravel possess favorable water-bearing properties, but because they are discontinuous, can only be considered as local groundwater conduits (SCVWD, 1989).

Hydrogeologically, the site is located in the northern region of the Santa Clara Groundwater Basin described as the "forebay zone" (SCVWD, 1989). This unconfined area is a subsurface feature composed of aquifer materials with no laterally continuous regional aquitard. Therefore, the downward migration of fluids into the regional groundwater aquifers would tend not to be restricted. In addition, the site is located in a hydrologically sensitive area where extensive percolation ponds have been established for the purpose of groundwater recharge.

During a site investigation performed at a facility located 0.3 miles to the southeast of the subject site in 1991, groundwater was encountered at approximately 12 to 13 feet below ground surface. Monitoring well measurements taken for the investigation indicated that the flow of groundwater in the site vicinity is toward the northwest (Tetra Tech, 1991).

Groundwater in this hydrologic area is designated as having existing beneficial uses for municipal, agricultural, and industrial uses and the area is designated as having potential uses for groundwater recharge (Tom Iwamura, personal communication, 1992).

4.0 PRESENT SITE CONDITIONS

4.1 SITE RECONNAISSANCE

Dames & Moore conducted a reconnaissance of the site and vicinity on October 12, 1992. The reconnaissance included observations of the existing site conditions and the nature of developments on neighboring properties. In addition, tenants were interviewed for information concerning the history of the site, on use and handling of potentially hazardous materials onsite, and on physical characteristics of onsite facilities.

At the time of the reconnaissance, the site consisted of five single-story, concrete tilt-up warehouse and light industrial buildings occupying an area of 301,064 square feet. These buildings are occupied by 17 tenants; two spaces are currently vacant. The major tenants include the Acer Technology Corporation, KSK Auto Parts, Inc., the Chipman Corporation and Versgrove Moving Systems. The majority of tenants did not store hazardous materials in excess of small quantities of janitorial and maintenance supplies. Those tenants storing hazardous chemicals include Custom Circuit Supplies, and Advance Vending and Food.

Surface water in the central area between the buildings generally flows toward the loading docks where it is collected by a subsurface drainage system. A pump was noted near the loading dock of Westside Produce. According to Ms. Teresa Morris, Office Manager for Westside Produce, the parking lot has flooding tendencies and a pump was installed to minimize accumulation of water during rain storms.

Acer Technology Corporation

Acer Technology Corporation, located at 2086 Zanker Road, is a distribution center for computers and computer components. This facility comprises a large warehouse and an office and break room located in the southeast corner of its space. Reportedly, no hazardous materials are used in their daily operations, although small quantities of janitorial cleaners are stored onsite. The concrete floor observed during the site reconnaissance appeared in good condition with no stains or cracks. An electric forklift is used at this facility for moving stock around the warehouse and according to Mr. Charles Calderon, the site supervisor, the forklift is maintained

by Clark, Inc. Mr. Calderon indicated that all waste associated with maintenance of the forklift is disposed off-site by Clark, Inc.

Chipman Corporation

The Chipman Corporation Facility is located at 2102 Zanker Road and stores furniture and household goods. The layout of this facility consists of a small warehouse and an office space in the western portion. No hazardous materials are used by the Chipman Corporation and no hazardous materials were observed to be stored on-site. An Air Conditioning (AC) unit sits above the office space on the roof. Chipman uses a forklift to move storage containers around the warehouse and according to Mr. Terry Welcane, the office manager, it is maintained off-site at a maintenance facility in Oakland.

Versgrove Moving Systems

The Versgrove Moving Systems facility, located at 2110 Zanker Road, is a furniture and equipment storage warehouse for Unisys. A small administrative office occupies the southwest corner of the large warehouse. According to Mr. Bob Zingsheim, Versgrove has occupied the tenant space for four years; it was previously occupied by a computer distributer. An AC unit sits above the roof of the office space. No hazardous materials were observed to be stored or used on-site with the exception of some small quantities of household cleaners, anti-freeze and paint.

United Motor Supply

United Motor Supply, located at 330 Charcot Ave., is a storage, wholesale and distribution center for automobile parts. The United Motor Supply facility stores automobile related solvents, sealants, cleaners, oil, transmission fluid and sprays in small quantities at the site. These supplies are sealed and unused products that are sold and distributed. No permits are required to store these supplies due to small size of business.

KSK Imported Auto Parts, Inc.

KSK Imported Auto Parts, Inc., located at 346 Charcot Ave., is a warehouse and distribution center for auto body parts and related sales and administrative work. The KSK space consists of a small office space and a large warehouse area. No hazardous materials were observed to be used at the site with the exception of some household cleaners and small amounts of motor

oil that is occasionally added to the delivery trucks. An AC unit has been installed on the roof over the small office space in the southwest corner of the building. According to Mr. Niko Kazadzis, they have operated at this location since 1985.

A transformer owned by Square D Corporation is located in a small room along the northern wall of the building. At this time no information is available to assess the presence of polychlorinated biphenyls (PCBs) in the transformer. However, the transformer and underlying floor appeared to be in good condition and showed no evidence of leakage from the transformer. Apparently, the transformer was installed after 1979 when Square D discontinued the use of polychlorinated biphenyls (PCBs) in its transformers.

NEC America, Inc.

NEC America, Inc. has recently terminated operations at the office located at 2070 Zanker Road. Dames & Moore was not able to access to vacated tenant space.

Marinetek

Marinetek, located at 2076 Zanker Road, is an administrative, sales, storage and distribution center for marine electronic equipment. Minor repairs of equipment are performed at the site, including limited amounts of hand soldering. With the exception of small amounts of propane to fuel a forklift and some small quantities of household cleaners, no other hazardous materials were observed to be stored onsite.

According to Mr. Thomas Ko, manager, in the past they had water leaks that originated from Westside Produce, and he complained about a foul odor, that is especially strong in the mornings, because of poor ventilation during the night.

Westside Produce

Westside Produce, located at 2078 Zanker Road, is an administrative and distribution center for produce. The Westside tenant space is occupied by a refrigerated area along the northeastern wall of the building and a heated room along the southeastern building wall. Three floor drains were observed during the site visit in the center of the site. These collect condensate from the refrigeration unit. No hazardous materials were observed to be used or stored at this facility. However, odors from rotting produce, as also mentioned by Marinetek, were noted during our site walk.

American Racing Equipment, Inc.

American Racing Equipment, Inc., located at 2118 Zanker Road, is an administrative, wholesale and distribution center for automobile wheels. An office occupies the southeastern corner of the warehouse and is cooled by a roof-mounted AC unit. No hazardous materials were observed to be used or stored at this facility.

American Olean Tile Company

American Olean Tile Company is located at 2118 Zanker Road and is a warehouse, distribution, retail and wholesale center of tile for offices and showrooms. An office and showroom containing ceramic floor tiles with a roof-mounted AC unit occupy the southeastern corner of the warehouse. With the exception of 3.5-gallon containers of organic adhesive that are for sale, no hazardous materials were observed to be stored or used at this facility. According to the manager, the concrete floor was sealed with an epoxy-type concrete sealant prior to occupancy in September 1992. Dames & Moore does not recommend any follow-up action.

Fujiwa Group USA, Inc.

The Fujiwa Group USA facility, located at 2120 Zanker Road, is a tile distribution center. Fujiwa has occupied this site for three years. The facility is made up of a large warehouse with an office and showroom space located in the southeastern section of the warehouse. A transformer, manufactured by General Electric, is located outside of this facility behind the building to the northeast. At this time, no information is available to assess the presence of PCB-containing fluids in the transformer. In general the space was in good condition and no stains were noted on the floor. With the exception of small amounts of propane used to fuel a forklift at this site, no hazardous materials were observed to be used or stored at this facility.

Munday & Collins

Munday & Collins subleases this space, located at 2122 Zanker Road, from General Outdoor and has occupied this space for three months. Munday & Collins rents audio and visual equipment and other related supplies. Paint spots were observed on the floor of this facility and according to the office manager, these were left from the previous tenant. This facility is comprised of a large warehouse and office space along the southern wall. No maintenance or repair of equipment occurs at this site and no hazardous materials were observed to be used or stored at this facility.

Biggam Enterprises

Biggam Enterprises, located at 2144 Zanker Road, is a warehouse and storage facility for packing products. A large warehouse and small office in the southwestern corner of the warehouse occupy this space. A propane-powered forklift is operated at this site. Two gallons of paint are used to label boxes and a glue gun is used to close packages. No other hazardous materials were observed to be used or stored at this facility.

Advance Vending & Food

Advance Vending has been located at 2140 Zanker Road for twelve years and operates as a storage, repair and distribution center for vending equipment and other related supplies. A large safe and office space occupy the southern portion of this large warehouse. A propane forklift is operated at this site. Approximately 20 tanks containing carbon dioxide (CO_2) are reportedly used in the refrigeration of the vending machines. One 55-gallon plastic drum containing solvents is stored near the rear entrance of the warehouse but its contents reportedly are not being used. At the time of our site visit a vending machine was being spray painted and strong vapor from spray painting was noted within the warehouse. Approximately 20 used spray paint cans were noted. According to Ms. Nancy Hill, the office manager, perishable items are stored on site and the facility is inspected regularly by the Fire Department and Santa Clara County Health Department.

Bedrosian Building Supply

Bedrosian Building Supply, located at 2148 Zanker Road, is a tile showroom and warehouse facility that is divided into a warehouse in the northern section and a showroom in the south. Other than adhesive, grout, and epoxy containers for sale, no other hazardous materials were observed to be used at this facility. A 100-gallon propane tank is located just outside the rear entry of the facility. According to John Meri, manager, the tank was installed by previous owners and the propane is used for the forklifts. Reportedly, one tank lasts approximately 9 to 12 months.

Custom Circuit Supplies and JD & Associates

Custom Circuit Supplies and JD & Associates are owned and operated by the same owner. Located at 2152-56 Zanker Road, this facility is used to repair and store equipment for the printed circuit industry. According to Mr. Bill Olive, general manager, JD & Associates buy

equipment and repair it and Custom Circuit Supply stores it until sold. Three locked cabinets store solvents and flammable materials, such as paint, one 55-gallon drum of methyl ethyl ketone (MEK) and other household cleaners. According to Mr. Olive, two 55-gallon drums of MEK are used per year as a degreaser and primer of the equipment being repaired. MEK is applied with rags that are air dried and disposed into dumpsters after use. Reportedly, because MEK is a solvent that readily evaporates, there is no waste from degreasing or other associated activities. A phosphoric acid tub is used to clean equipment. Reportedly, one gallon of phosphoric acid is used each month. The tub has never been cleaned and the sludge at the bottom of the tank has never been removed. A small container of used oil was also noted next to the acid tub. Also noted at the facility: hydraulic oil, approximately 10 used car batteries, empty paint cleaning fluid cans, 5-gallon containers of lacquer thinner, and portable propane tanks used for the overhead heating units.

4.2 ADJACENT PROPERTIES

Properties adjacent to the site were observed during our site reconnaissance in order to evaluate local land use and to identify potential environmental concerns that might adversely impact the site (Figure 3). Specific observations are summarized as follows:

- Railroad tracks run along the northeastern boundary of the subject property. Hill Brothers Chemical Company, 410 Charcot Ave, is located immediately adjacent to the railroad tracks. A hose was observed at this facility approximately 50 feet east of the tracks with a sign indicating that methylene hydroxide is dispensed through it. Indications of spills were noted around the hose and along the driveway that leads to Charcot Ave. Dames & Moore contacted Mr. Matt Thorn, an employee of Hill Brothers, regarding the environmental record of the company. Mr. Thorn was not aware of any problems and reported that there have been no spills and there are no present or past agency investigations. Dames & Moore contacted the City of San Jose, Neighborhood Preservation and Environmental Enforcement Office regarding Hill Brothers. Mr. Carlos Azcona of the City office advised us that residents have called reporting residues flowing into the storm sewer system, tracking of chemicals onto the street and a tank overflowing during filling. Follow-up inspections found calcium chloride and magnesium hydroxide in the catch basins of the storm sewer system which reportedly are non-hazardous chemicals.

- A medium sized industrial park containing light industrial and commercial establishments borders the site to the southeast.

- Zanker Road forms the southwestern boundary of the site. Light industrial and commercial establishments exist across Zanker Road.

- Charcot Avenue forms the northwestern border of the site. A medium sized industrial park comprised of light industrial and commercial establishments exists across Charcot Ave.

The surrounding properties consist primarily of light industrial and commercial office developments. Light industrial and chemical manufacturing facilities were observed neighboring the site. The chemicals spilled on the surface at Hill Brothers are, reportedly, non-hazardous compounds. Based on the observations made of the adjacent properties during the site reconnaissance, it is the opinion of Dames & Moore that the potential for environmental impairment resulting from current operations at adjacent properties is low.

4.3 LIMITED ASBESTOS SURVEY

On October 12, 1992, Dames & More conducted a limited asbestos survey at the subject site. This visual survey was conducted on a building-by-building basis to evaluate the type, locations, and conditions of identified suspect friable and non-friable, asbestos containing material (ACM) in accessible areas. In addition, previous asbestos reports provided by AMB were reviewed (Table 2). Sampling of suspect ACM was not conducted during the investigation.

Based on the visual survey and review of the previous reports provided by AMB, the following suspect materials have been identified:

- Drop acoustic ceiling tiles in the office spaces throughout the site.

- Vinyl floor tiles and mastics (associated with floor tiles) in the office spaces.

- Built-up roofing materials and parapet wall roofing materials.

The potential presence of ACM in the buildings does not necessarily mean that the health of the occupants is endangered. If ACM remains in good condition and has not been disturbed, exposures are expected to be negligible. However, when ACM deteriorates, or becomes damaged, such as during renovation, demolition, or minor repair operations, asbestos fibers may be released, creating a potential health hazard for building occupants and maintenance personnel. Therefore, because the suspect ACM was in good condition and considered to be non-friable,

it is Dames & Moore's opinion that it does not represent a significant health risk to the building occupants at this time.

4.4 SICK BUILDING SYNDROME

In general, "sick building syndrome" relates to the presence of indoor air pollutants in the work place which promote symptoms of illness among building occupants. Potential sources of indoor air contaminants include: the migration of contaminants from outside the building; tobacco smoke and particles; thermal and relative humidity discomfort; off-gassing from carpets, furniture and building materials; dust and chemical particles from materials used/stored indoors; and microbial contaminants (mold and bacteria) in ventilation systems.

Dames & Moore's evaluation of the presence of "sick building syndrome" included observations during the site reconnaissance and interviews with site tenants. Mechanical drawings and construction plans were not available for review. Several of the tenant spaces were observed to have roof-mounted air conditioning systems.

In general, adequate ventilation appeared to be provided at the site. However, foul odors from Westside Produce and vapors from Advance Vending were noted during the site reconnaissance, and the manager of Marinetek complained about the foul odors originating from Westside Produce. Based on this information, it is Dames & Moore's opinion that the potential for sick building system exists at Westside Produce and Advance Vending, as well as tenant spaces adjacent to these two facilities.

4.5 RADON

Radon is a naturally occurring by-product of the radioactive decay of uranium. Naturally occurring concentrations of radon are generally associated with the presence of uranium-rich rock or sediments at or near the ground service. California is generally not recognized as being an area with a high risk of having elevated levels of radon. A study recently published by the California Department of Health Services showed that 1% to 2% of all homes in California have elevated levels of radon (Louise Hill, California Department of Health Services, personal communication, 1992).

Natural radon can be an environmental problem when it becomes concentrated in buildings and homes. Radon typically enters a structure through cracks, expansion joints, or subfloor drains.

The concentration of radon is most likely to occur in basements or slab floor structures within rooms that have poor circulation or which are sealed tightly against the outside air.

The site is located over alluvial deposits and intermixed series of laterally discontinuous clays, silts, sands and gravels. The potential for the presence of radon in onsite buildings is considered low because California is not recognized as being an area with a high risk for radon, because the buildings are of slab-on-grade construction with no basements, and because onsite buildings appear to have relatively good air circulation. For the foregoing reasons, testing for radon in the ambient air is not recommended for this site.

5.0 PAST SITE LAND USE

Dames & Moore's review of historical information consisted of an examination of readily available records and historical aerial photographs for evidence of previous site activities and development which may suggest the potential presence of hazardous materials at the site. Information regarding past site use was obtained from several sources. Dames & Moore reviewed historical aerial photographs available at Pacific Aerial Surveys in Oakland, California. A summary of the review of historical photographs is found in Appendix A.

In addition, available archival topographic maps from the Doe Memorial Library at the University of California at Berkeley were reviewed. These maps included the U.S. Geological Survey (USGS) Milpitas, California Quadrangle, dated 1953, 1961, photorevised in 1968, 1973 and 1980, and the USGS San Jose West, California Quadrangle, dated 1953, 1961, photorevised in 1973 and 1980. Dames & Moore also requested a Sanborn Fire Insurance Map search for the subject site by the Sanborn Mapping and Geographic Information Service (Sanborn). On September 29, 1992, Dames & Moore was informed by Sanborn that there is no coverage of the site (Sanborn, 1992).

5.1 CITY OF SAN JOSE PUBLIC WORKS DEPARTMENT

Building permit files from the San Jose Department of Building Inspection were reviewed for information regarding the site land-use history and potential for environmental impairment. The earliest document available for the site is an application for building permit dated December 16, 1975 for 282 Charcot Drive. This address does not currently exist onsite. Other available files generally included building permits and some improvement permits for the site. Potential environmental concerns were not identified during our review of the available building permit files from the San Jose Department of Building Inspection.

5.2 ARCHIVAL TOPOGRAPHIC MAPS AND HISTORICAL AERIAL PHOTOGRAPHS

Review of an aerial photograph and a topographic map indicate that in 1954 the site and the surrounding area consisted of agriculturally developed fields. North 1st Street and Freeway 880 were present and appeared as a medium and a heavy duty road, respectively. Small farm houses and developed fields and orchards were evident in all directions surrounding the site.

By 1963, several unimproved dirt roads were developed to give access to the cultivated fields within the site vicinity. During this time period a drive-in movie theater was located to the west of the site and a cluster of buildings was evident southeast of the site on the corner of Rogers and Junction Avenue.

By 1971 a large manufacturing facility appeared directly to the southeast of the site. Drums were evidently stored on the south side of this facility located across the railroad tracks to the southeast of the subject property. The completion of several small buildings was evident approximately ¾ miles to the west of the site. Cultivated fields occupied the property directly to the north and south of the site. The site remained unchanged.

Two of the present day structures and grading in preparation of further development appeared by 1976 on the subject site. Two large above-ground tanks appear to the immediate east of the site. The completion of three large warehouse structures appear across Charcot Ave. to the north of the subject property. Grading is also evident to the northeast of the site in preparation for development.

Onsite construction appeared to be complete by 1982. Industrial and commercial development in the area has surrounded the subject site. Another-above ground storage tank appears with the other two to the immediate east of the site. With the exception of a few new commercial and industrial developments in the site vicinity, the site and the surrounding area appeared in the 1988 and 1991 much as they did during the site reconnaissance.

Potential environmental concerns include the existence of a manufacturing facility to the northeast of the site and the historic storage of drums on the south side of that facility. Potential environmental concerns also include the existence of three above-ground storage tanks neighboring the subject site to the east. No potential environmental concerns were identified on the subject site during our review of historical information.

6.0 DOCUMENT REVIEW

The documents provided to Dames & Moore by AMB and reviewed for information regarding the past land use at the Zanker/Charcot site are listed in Table 2. A summary of our findings is discussed below.

The report by Hygienetics, Inc. of Emeryville, California "Environmental Site Assessment and Asbestos Survey and Hazard Assessment Report" dated January 6, 1992 states:

- No evidence of the release of oil, hazardous materials, or hazardous wastes were observed on the site. No underground storage tanks (USTs) are known to exist on the site.

- No evidence of soil or groundwater contamination from off-site sources was identified.

A site inspection conducted by Hygienetics, Inc. and discussed in the same report provided the following information:

Hazardous Materials Storage

The majority of tenants on site do not store large quantities of hazardous materials. Hazardous materials stored in large quantities include:

- 275 gallons of phosphoric acid, 55 gallons of MEK, 75 cubic feet of acetylene and 5 gallons of "Aquatone" manufactured by Graymills stored at Custom Circuit Supplies, 2156 Zanker Road.

- Brake fluids, motor oils, carburetor cleaners, etc. stored only for distribution at Par Distributors, 2138 Zanker Road.

- A 10 cubic foot acetylene tank, a 55-gallon drum of Kelkco brand "Nok-It-Off" industrial cleaner, 50 cans of spray paint, five 1-gallon containers of miscellaneous solvents and two 30-lb cylinders of Freon stored at Advance Vending, 2140 Zanker Road.

Hazardous Waste

Custom Circuit Supplies at 2156 Zanker Road was the only tenant found to generate hazardous waste. They are not recognized as a hazardous waste generator under the EPA Resource Conservation and Recovery Act (RCRA). Only one 55-gallon plastic drum containing waste oil generated by company vehicles was found on the site.

No other documents provided by AMB contained evidence for hazardous materials or hazardous waste releases on-site or evidence of on-site USTs.

Polychlorinated Biphenyls (PCBs)

Hygienetics, Inc. noted the possibility that some of the fluorescent lighting on-site may contain PCB-containing ballasts.

Asbestos

AMB provided asbestos investigation reports from three different companies. These include two from J.M. Cohen, Inc. dated June 17, 1987 and December 16, 1988 and one each from Diagnostic Engineering, Inc. (DEI) and Hygienetics, Inc. dated December 10, 1990 and January 6, 1992, respectively.

J.M. Cohen's report on June 17, 1987 found asbestos-containing vinyl tile and recommended no testing. J.M. Cohen's report on December 16, 1990 identified automotive parts that may contain asbestos in addition to the previously identified vinyl tile. No cleanup or testing recommendations were made.

DEI's report entitled "Asbestos Survey Report — Final Report for Annual Audit" dated December 10, 1990 indicates that asbestos analyses were performed on resilient sheet flooring (backing only), acoustic ceiling panels (2 × 4 feet), acoustic ceiling tiles (12 × 12 inches) and select resilient sheet flooring. Only the resilient sheet flooring (backing only) tested positive for asbestos but was deemed safe as long as it remained intact and in good condition. DEI also suspected but did not test fire-rated insulated door core, joint compound, resilient floor tile, floor tile mastic and wallboard.

Hygienetics, Inc.'s report dated January 6, 1992 indicates asbestos sampling was performed on suspect materials including floor tiles and mastics, roof sheeting, tars and sealants. Materials

found to contain asbestos were vinyl floor tiles, mastic (associated with floor tiles), built-up roofing materials and parapet wall roofing materials. All of the ACMs identified on-site are currently non-friable and in good condition. Hygienetics did not sample ACMs previously sampled by DEI. Under current conditions, Hygienetics states that there is not a significant exposure risk to building occupants unless activities occur that would cause the release of asbestos fibers.

No other documents provided by AMB included evidence for potential asbestos contamination or hazards related to asbestos.

7.0 AGENCY LIST REVIEW

During the last 15 years, federal and state governments have developed legislation relating to environmental concerns. As a result of this legislation, laws and regulations which govern hazardous and/or toxic wastes and materials, and the manufacture, generation, use, storage, release, and/or disposal of such materials have been promulgated. As a consequence of these laws and regulations, numerous agencies collect and disseminate information for use in evaluating potential environmental problems.

To assess the potential for soil and groundwater contamination at the site or on nearby properties, Dames & Moore reviewed documents provided by a variety of these federal, state, and local agencies. For this purpose, Vista Environmental Information, Inc. (Vista) provided a computerized search for Dames & Moore entitled Vista Government Records Report, which is attached as Appendix C.

The following lists were searched within a one-half mile radius around the site (acronyms and abbreviations are listed in Appendix B):

- U.S. Environmental Protection Agency (U.S. EPA), National Priorities List (NPL) (Superfund Sites), dated January 23, 1992;
- California Environmental Protection Agency (CAL EPA) Expenditure Plan for the Hazardous Substance Bond Act of 1984 (Bond Expenditure Plan (BEP)), revised 1989, updated January 10, 1990, with supplemental lists of annual workplan sites - FY 1991-1992, dated October 31, 1991;
- U.S. EPA, Comprehensive Environmental Response, Compensation, and Liability Act List (CERCLIS), dated January 9, 1992;

- California Office of Planning and Research (COPR), Hazardous Waste and Substances Sites List (Cortese or Governor's List), dated November 1990;

- CAL EPA Calsites List, dated October 31, 1991;

- California Integrated Waste Management Board (CIWMB), Solid Waste Information System (SWIS), Lists of Active Landfills, Closed and Inactive Landfills, Transfer and Composting Stations and Materials Recovery Facilities (MRFs), and Proposed Facilities, all dated October 31, 1992;

- California Regional Water Quality Control Board (CRWQCB), San Francisco Bay Region, Leaking Underground Fuel Tank List (LUFT), dated January 31, 1992;

The lists reviewed by Vista indicated the presence of 54 potential hazardous waste sites and potential hazardous materials-contaminated sites recognized by the government agencies within one-half mile of the subject property.

A summary of the status of the 54 facilities can be found in Table 3. The locations of the facilities are shown on Figure 3. The CIWMB SWIS List of active and closed landfills and transfer stations indicated no landfills within the one-half mile search radius of the subject site.

Forty of the 54 facilities identified on these lists are down or cross-gradient from the site or have no documented evidence concerning unauthorized releases of hazardous materials to the soil or groundwater and, as such, are considered to have a low potential to affect the subject site. One of the facilities listed includes the Rosenberg Real Estate Equity Fund, which was a former tenant, located at 2144 Zanker Road before Biggam Enterprises. This facility was previously identified on the CAL EPA HWIS List which identifies hazardous waste generators and hazardous waste storage and treatment facilities. No information was identified in the agency list review that suggested soil or groundwater had been impacted by the Rosenberg Fund. Dames & Moore contacted Mr. Don Wilkerson at Biggam Enterprises. Reportedly, Biggam Enterprises is not handling any hazardous materials.

Facilities that are upgradient of the site and have documented evidence of unauthorized releases of hazardous materials to soil and/or groundwater include: Western Steel Cutting, located at 1788 Rogers Avenue; Nestor Insulation, located 1792 Rogers Avenue; Kamper Kits, located at 1781 Junction Avenue; Phototron, located at 524 E. Brokaw Road; Precision Roofing, located at 510 E. Brokaw Road; Junction Oaks Properties located at 1819 Junction Avenue and the former FMC Corporation facility located at 495 E. Brokaw Road.

According to files reviewed at the Santa Clara Valley Water District (SCVWD) office by Dames & Moore, a 6,000 gallon and a 500-gallon underground storage tank were removed from the Western Steel facility located at 1788 Rogers Ave. This facility is located approximately ⅛ mile southeast of the site and is identified on the CRWQCB LUST List and the COPR Cortese List. Data collected during a recent investigation of this facility confirmed the presence of hydrocarbon compounds in groundwater in the vicinity of the former UST location. The highest detection of a hydrocarbon compound was Total Petroleum Hydrocarbon as gasoline (TPHG) at 0.43 parts per million (ppm) (Seacor, 1991). Considering the low levels of hydrocarbons involved and the relative distance from the subject site it is Dames & Moore's opinion that the potential for this facility to environmentally impact the subject site is low.

Nestor Insulation is located at 1792 Rogers Avenue approximately ⅛ mile southeast of the subject site. This facility was identified on the CRWQCB LUST and COPR Cortese List, indicating that an unauthorized release from an UST has occurred. According to files reviewed at the SCVWD, a subsurface release of petroleum hydrocarbons occurred in 1986. A City of San Jose hazardous materials report indicted that a soil analysis showed contamination of 566 ppm TPHg. In a letter dated June 1991, the SCVWD requested a copy of a tank closure report in order to evaluate any threat to surface or groundwater (SCVWD, 1991). Dames & Moore contacted Tracy Hemmeter of the SCVWD who indicated that no further information has been received.

According to file reviewed at the CRWQCB, two USTs were removed from the Kamper Kits facility in 1987. This facility is identified on the CRWQCB LUST List and the COPR Cortese List and is located approximately ⅛ mile southwest of the site. A groundwater sample collected from a monitoring well located at this facility in March 1991 indicated the presence of hydrocarbon compounds. TPHG was detected as high as 25 ppm (On-site Technologies, 1991). Considering the distance from the subject site and the levels of contamination at this facility, the potential for environmental impairment to the site from this facility is considered low.

Phototron, located at 524 E. Brokaw Road, and Precision Roofing, located at 510 E. Brokaw Road, have been identified on the CRWQCB LUST List and the COPR Cortese List for subsurface releases of petroleum hydrocarbons and are approximately ¼ mile southeast of the subject site. Files reviewed for Phototron and the CRWQCB indicated that soil was contaminated after the removal of a UST. Soil sample analyses indicated total petroleum fuel hydrocarbons were present as high as 12 ppm (Seidelman Associates, 1987). No documented information concerning Precision Roofing was available. Dames & Moore contacted Mike Godwin of the CRWQCB who informed us that no contamination from these two facilities has

been detected beyond twenty to thirty feet north of E. Brokaw Road. He indicated that monitoring wells located north of E. Brokaw Road did not show any signs of contamination from these facilities. Based on information provided by the CRWQCB, the potential for environmental impairment to the subject site from these facilities is considered low.

The Junction Oaks facility, located at 1819 Junction Avenue is adjacent to the subject property to the southeast and is upgradient. According to files reviewed for this facility at the CRWQCB, two 2,000 gallon USTs containing gasoline were removed in 1985 from the southwestern portion of the site. In 1989, a 2,000 gallon wastewater UST and surface drain located in the western part of the property were removed. No TPHG was detected from samples collected from the fuel tank excavation. Although all the samples from the wastewater tank excavation contained petroleum hydrocarbons, one sample had significantly higher concentrations than the other samples. This sample had 1,281 ppm TPHg; 16 ppm perchloroethylene (PCE), 24 ppm ethylbenzene, 32 ppb toluene and 160 ppm xylenes. Remediation (over-excavation) was apparently discontinued at first encountered groundwater. No further characterization or remedial activities at the facility have been reported to the CRWQCB (Emcon, 1991). Based on information reviewed at the CRWQCB, it is Dames & Moore's opinion that contamination from this site has impacted the subject site.

Miller, Morton, Caillat and Nevis are the legal representatives of Junction Oaks, Inc. in the remedial activities. A&B Painting and Ryan Herco Industries are former lessees of the property and, therefore, potentially responsible parties (PRPs). Ms. P. Silberstein, an attorney with the above mentioned firm, advised Dames & Moore that future remedial work will likely be performed in conjunction with FMC.

A letter from Dames & Moore to AMB dated October 23, 1992 did not address the Junction Oaks facility, because it was incorrectly considered to be part of the FMC site. Because of the identified PRPs and planned remedial work; it is Dames & Moore's opinion that Phase II work at the subject site related to contamination stemming from the Junction Oaks facility is not required.

CRWQCB files reviewed for the former FMC Corporation, located at 495 E. Brokaw Road indicated that subsurface contamination of soil and groundwater exists at this facility, which borders the southern property line of the Junction Oaks facility and is also adjacent to the subject site. Information found in this file indicates that groundwater flows towards the subject site under a relatively flat gradient of less than 0.002. Concentrations of VOCs detected in the northern corners of the FMC facility show levels as high as 6.7 ppm and 4.2 ppm in

groundwater and 10.1 ppm TPH as gasoline in soil (Emcon, 1992). Based on the information reviewed at the CRWQCB, it is Dames & Moore 's opinion that contamination from this facility may have impacted the subject site.

Dames & Moore contacted Mr. Mike Godwyn of the CRWQCB who informed us that FMC is under order by the Board to remediate the soil and groundwater contamination. According to Mr. Godwyn, FMC used the facility from 1966 to 1987 for the manufacturing of commercial logging equipment and military ordinance. FMC sold the property in 1987 to 6000 S. Corporation which in turn sold it to Mr. Stan Davis and 495 East Brokaw Road Associates. The building is presently occupied by Bill Dean Goodyear. Reportedly, the ownership of the property has recently been returned to FMC as part of a bankruptcy settlement with FMC as a 2nd or 3rd mortgage holder of the subject property. FMC reportedly is committed to remediation work in order to comply with the Agency (RWQCB) Order Number 90-032 (Emcom, April 1992). Remedial action has been taken by FMC as indicated by reports by Emcon Associates for FMC Corporation dated June 1991, April 1992, and July 1992. Based on this information, Dames & Moore concludes that the responsibility and liability issues related to the contamination stemming from the FMC facility have been resolved and Phase II work related to this contamination on the project site is not required.

Stone Container Corporation at 1901 Junction Avenue, neighboring the subject site to the east, is listed on the CORTESE List according to the Vista report. Dames & Moore's review of agency files indicates that the contamination of the groundwater beneath the Stone Container property originates from the neighboring FMC property. According to Mr. Don Dalke of the RWQCB, Stone Container has been removed as a liable company from the County of Santa Clara list of responsible parties.

8.0 AGENCY CONTACTS

The San Jose Fire Department was contacted for information regarding records of permitting, compliance violations, USTs, hazardous material spills, illegal dumping, and storage of hazardous materials at the site. As of the date of this report, we have not received this requested information.

Dames & Moore contacted Mr. David Grabiec of the San Jose/Santa Clara Water Pollution Control Plant for information regarding the discharge of wastewater to the sanitary sewer system from the site. We were informed that no record of violation was found during a review of their files.

Ms. Rochelle Walker of the Bay Area Air Quality Management District was contacted regarding the permitting, violations or complaints concerning the tenants at the subject site. Ms. Walker informed Dames & Moore that a Shear Comfort Company facility located at 286 Charcot Avenue was permitted for a "spray booth" on their property. No evidence of violations or complaints was found.

Dames & Moore contacted Mr. Jim Carnahan, California Department of Conservation, Division of Oil and Gas for information concerning abandoned oil and gasoline wells on the site. Mr. Carnahan informed us that no abandoned wells exist within the one-half mile search radius.

Lois Tomlinson of the CAL EPA Department of Toxic Substance Control was contacted regarding records of compliance violations, hazardous materials spills, and the use, storage and/or disposal of hazardous materials. Ms. Tomlinson informed Dames & Moore that the CAL EPA has no files concerning the site.

9.0 CONCLUSIONS AND RECOMMENDATIONS

Dames & Moore has completed a Phase I Preliminary Site Assessment of the Zanker/Charcot Industrial Park located on the southeastern corner of Zanker Road and Charcot Avenue in San Jose, California. This investigation was performed for AMB on behalf of its client.

This assessment was conducted by reviewing information related to the site and site vicinity, and by performing a visual reconnaissance of the site to identify sources of potential environmental impairment, and areas with the potential for hazardous material manufacture, generation, use, storage, release, or disposal. Results of the PSA suggest the following:

- Evidence indicating potential onsite environmental impairment was found during our review of historical information and regulatory agency documents. Files reviewed at the CRWQCB indicated that the FMC Corporation, which is adjacent to the subject property to the southeast, has extensive contamination in the groundwater and soil. The files further document the extent of contamination from the FMC facility may have impacted the subject site. FMC initiated remedial efforts in April 1992 and is committed to remediation work to comply with local regulations. Based on the above information it is Dames & Moore's opinion that it is unlikely that the owner of the subject site will be required to investigate or remediate contamination which has migrated onto the subject site from the former FMC facility. Dames & Moore recommends that the property owner periodically review agency files to monitor

remedial efforts at the FMC facility. Dames & Moore does not recommend Phase II work at the subject site related to the contamination stemming from the FMC site.

- It is possible that contamination from the Junction Oaks facility has affected the groundwater beneath the subject site. Based on Dames & Moore's research, it appears that the former lessees of the property have been identified as the parties responsible for the contamination. Dames & Moore does not recommend Phase II work at the subject site related to contamination stemming from the Junction Oaks site.

- Evidence was not found to suggest that the site has not been affected by the improper use, storage, or disposal of hazardous materials by the tenants.

- Based on the observations during the site visit and on information provided by the tenants, it is the opinion of Dames & Moore that the potential for "sick building syndrome" is low;

- Because California is not recognized as being an area with high risk for radon, because the buildings are on slab-on-grade construction with no basements, and because onsite buildings appear to have relatively good air circulation, it is the opinion of Dames & Moore that the potential for the presence of radon in onsite buildings is low.

- Based on review of previous consultant reports and Dames & Moore's visual inspection of the site, Dames & Moore has found that ACMs are present in several locations onsite. All of the suspect and confirmed ACMs identified onsite appear to be non-friable and in good condition and, as such, are considered not to represent a significant risk to building occupants unless activities occur that would cause the release of the asbestos fibers. Dames & Moore recommends implementation of an Asbestos Operation and Maintenance Plan in accordance with applicable regulations.

- No evidence indicating potential significant on-site environmental impairment was identified during our review of historical information and regulatory agency documents.

- Dames & Moore recommends the disposal of a 55-gallon plastic drum containing solvents observed at Advance Vending & Food at 2140 Zanker Road.

- Dames & Moore recommends the improvement of housekeeping at Custom Circuit Supplies and JD & Associates (2152-56 Zanker Road), including the regular removal of sludge in a phosphoric acid tub.

Aside from the recommendations discussed in this report, Dames & Moore does not recommend further investigation of the site at this time.

We appreciate the opportunity to provide these services to AMB. If you have any questions regarding this report, please do not hesitate to contact us.

Respectfully submitted,

DAMES & MOORE

The following is a summary of the review of readily available historical aerial photographs of the site taken between 1954 and 1992:

1954 The site appeared to be part of a large agriculturally developed field. Highway 101 and North 1st Street were noted in their present day locations. A few farm houses and dirt roads that provided access to the farm fields were observed in the general vicinity of the site.

1963 The site still appeared developed as part of a large agriculture field. A drive-in movie theater was observed on the corner of Zanker Road and Mcgier to the west of the site. A cluster of buildings was evident southeast of the site on the corner of Rogers and Junction Ave.

1971 A large manufacturing facility, presumably the FMC Corporation facility, was observed adjacent to the subject site property to the southeast. Drums appeared to be stored on the south side of this facility which is located across the railroad tracks to the east of the site. The completion of several small buildings was evident to the west of the site. Cultivated fields occupied the land to the direct north and south of the site. The site remained unchanged.

1976 The site appeared partially developed with two buildings. Grading was also evident on the site, presumably in preparation for development at the site. Two large above-ground tanks were evident to the immediate east of the site, presumably on the Hill Brothers Chemical Company property. The completion of three large warehouses appear across Charcot Avenue to the north of the subject property. Grading was also evident to the northeast of the site in preparation for development.

1982 The site appears fully developed. Industrial and commercial development in the area has surrounded the subject site. Another above-ground storage tank appeared with the other two at the Hill Brothers Chemical Company facility.

1988-1991 With the exception of a few new commercial and light industrial developments in the site vicinity, the site and the surrounding area appeared unchanged from the previous aerial photographs.

Dear Subscriber:

In response to your recent order for services, we enclose your *Vista Government Records Report*. We hope you find the information helpful in your investigation. In the event you require additional information about any site identified in this report, please contact our *Customer Service Department*.

Please remember that this report represents only a search of the specific government records listed in the table of contents. Vista is aware of additional government record sources that have not been included in this report and Vista makes no representations of adequacy for Subscriber's purposes. The Subscriber should also be aware that government environmental records often have incomplete or inaccurate locations. Subscriber acknowledges that all reports reflect locations of street addresses and do not necessarily indicate the size or specific location of any site. In addition, the Subscriber must recognize that government agencies do not list all sites of environmental contamination. Therefore. this report should not be used as a substitute for a complete Phase I Audit and should be reviewed by a qualified attorney or environmental consultant.

This report is intended only for the use and benefit of the Subscriber who shall be the only party authorized to review this report. This report is provided pursuant to a subscription agreement with Vista Environmental Information, Inc., and is subject to all of the terms and conditions thereof, SPECIFICALLY INCLUDING, BUT NOT LIMITED TO, PROVISIONS REGARDING SUBSCRIBERS USE AND LIMITATIONS OF VISTA ENVIRONMENTAL INFORMATION, INC.'S LIABILITY. We appreciate your patronage.

RWQCB REFERRAL SITE

VAN WATERS AND ROGERS, INC.

Site Information

Location and Type of Site
2256 Junction Avenue
San Jose, CA 95131
Santa Clara

Van Waters and Rogers is a division of Univar which operates a chemical blending, storage and distribution facility. The site encompasses about 12 acres in the City of San Jose. The facility contains about 36 underground tanks which store a variety of organic compounds.

Description of Hazardous Wastes
In 1982, soil and ground water contamination was discovered at the site. This contamination was caused by spillage, inadequate handling practices and/or leakage from tanks and piping. The following contaminants have been detected: trichloroethane (TCA), perchloroethylene (PCE), dichloroethane (DCA), dichloroethylene (DCE), methylene chloride, vinyl chloride, toluene, ketones, xylene and alcohols.

Threat to Public Health and Environment
Ground water contamination at the site represents a potential threat to public health and the environment. Domestic wells are located one-half mile downgradient of the site.

Site Status

Status of Site Activity
Van Waters and Rogers, Inc, has installed and is operating a ground water extraction system. The lead responsibility within DHS for oversight of remedial activities at this site has been transferred to the regional facilities permitting unit.

Projected Revenue Sources
Van Waters and Rogers, Inc., the responsible party is conducting cleanup activities under the direction of the RWQCB. The RWQCB will continue to have lead responsibility for monitoring Van Waters and Roger's progress under an existing cooperative agreement between the RWQCB, EPA and DHS. The RWQCB is conducting the work with support from the EPA through a cooperative agreement. Until such time as the RWQCB refers the site to DHS for follow-up using Bond funds, no money will be budgeted from this fund for this site.

LIST OF RECORDS SEARCHED

This report represents a search of the following government database sources:

DATABASE		*TYPE OF RECORDS*	*AGENCY*
CERCLIS	:	Contaminated Sites Under CERCLA (1980)	U.S. EPA
NPL	:	Federal Superfund Sites	U.S. EPA
LIENS	:	Filed Notices of Superfund Liens	U.S. EPA
CORTESE	:	Hazardous Waste & Substances Site List	California Governor's Office of Planning & Research
CAL-SITES/ AWP	:	Contaminated sites listed on the Annual Work Plan, and cleanup sites under the Bond Expenditure Plan	California EPA
BZP	:	Sites designated as Border Zone Properties (Deed Restrictions)	California EPA
CAL-SITES/ ASPIS	:	Actually or potentially contaminated sites under the Abandoned Site Program	California EPA
HWIS	:	Hazardous Waste Generators, Treatment, Storage & Disposal Facilities	California EPA
SWIS	:	Active & Inactive Sanitary Landfills and Disposal Facilities	California Waste Management Board
LUST	:	Leaking Underground Storage Tanks	California Regional Water Resources Control Boards

Due to the scale of the map, red and green squares on the map may represent more than one agency listing or location. For a detailed description of each source, please refer to the legends on the following pages.
For more information please call (800) 733-7606.

CERCLIS

The information presented in this report is updated to January 9, 1992.

Since 1982, U.S. EPA has developed and maintained lists of contaminated properties under the federal Superfund program pursuant to the Comprehensive Environmental Response Compensation and Liability Act of 1980 (CERCLA), 42 U.S.C. Section 9601 (1985). U.S. EPA discovers these sites from citizen reports, routine inspection of hazardous waste generators, treatment, storage and disposal facilities, and reporting requirements. This database tracks approximately 2300 sites of environmental concern in the state of California.

NATIONAL PRIORITY LIST (NPL)

The information presented in this report is updated to January 23, 1992.

U.S. EPA maintains this list under the Comprehensive Environmental Response Compensation and Liability Act of 1980 (CERCLA) 42 U.S.C. Section 9601 (1985). Once sites have been designated on the CERCLIS List, U.S. EPA uses its Hazard Ranking System (HRS) to determine potential risks to human health and the environment. Only those CERCLIS sites which present the greatest risk are added to the NPL, which qualifies the sites to receive CERCLA remedial funding. EPA currently lists over 85 NPL sites in the State of California.

FEDERAL SUPERFUND LIENS (LIENS)

The information presented in this report is updated to September 11, 1991.

Under Section 107(L) of the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA) 42 U.S.C. Section 9607 (1), US EPA has authority to file liens against real property to recover clean up, response, and any other expenditure made by US EPA under the CERCLA program. US EPA has prepared a listing of filed notices of Superfund liens which is updated quarterly. Because these liens are "statutory liens," they arise when the agency spends money on a site or when notification of potential liability is received by the owner of the property. EPA maintains that these liens can arise without filing, however, and they suggest checking CERCLIS sites for lien status.

MAP ID NO.	SITE NAME	LOCATION	DATE FILED	ESTIMATED VALUE

As of the date listed above, no sites listed in this database are located within a one half mile radius of the subject property.

HAZARDOUS WASTE AND SUBSTANCES SITES LIST
CORTESE

The information presented in this report is updated to November, 1990.

The California Governor's Office of Planning and Research annually publishes a listing of potential and confirmed hazardous waste sites throughout the State of California under Government Code Section 65962.5. This database currently contains approximately 6,000 entries in the state of California. This list is based on input from the following agencies:

1) DHS1: Records that have been compiled by the Toxic Substances Control Division of the Department of Health Services. This code indicates abandoned hazardous waste sites.

2) DHS2: Records that have been compiled by the Environmental Health Division of the Department of Health Services. This code indicates contaminated public water drinking wells that serve less than 200 connections ("small wells").

3) DHS3: Records that have been compiled by the Environmental Health Division of the Department of Health Services and consist of contaminated public water drinking wells that serve more than 200 connections ("large wells").

4) DHS5: Sites pursuant to Section 25356 of the Health and Safety Code (sites included under the Hazardous Substance Cleanup Bond Act).

5) WRCB: Records compiled by the Water Resources Control Board. These are sites of reported leaks that have been investigated by the WRCB. Leak sites do not necessarily lie within incorporated boundaries of listed cities.

6) CWMB: Records compiled by the California Integrated Waste Management Board. These are solid waste disposal facilities from which there is a known migration of hazardous waste.

CAL-SITES (AWP)

The information presented in this report is updated to October 31, 1991.

The Annual Work Plan (AWP) contains a listing of all verified hazardous waste sites that are or will be targeted for abatement by the California Environmental Protection Agency under the Hazardous Substance Cleanup Bond Act of 1984 (Health and Safety Code Section 25356) and the Hazardous Substance Account (HSA). Hazardous waste sites may be discovered by the department directly or referred to the department for confirmation and follow up action by another government agency, such as a local health department, a Regional Water Quality Control Board, a responsible party or a concerned citizen. New sites are added to this database as they are verified and the "Preliminary Assessment, Site Investigation and Hazard Ranking System" processes are completed. This database is updated once annually after approval of the California state legislature and has been incorporated into the CAL-SITES database.

This database currently contains a list of approximately 450 sites in the State of California.

BORDER ZONE PROPERTY ACT SITES
(DEED RESTRICTIONS)

The information provided in this report is updated to February 1, 1992.

In accordance with Assembly Bill 816, and the Hazardous Waste Property/Border Zone Property Law (Health & Safety Code 25220), the CAL-EPA, Department of Toxic Substances Control (DTSC) is authorized to enter into voluntary deed restriction agreements with owners of property who propose building residences, schools, hopitals or day care centers on property that is "on or within 2,000 feet of a significant disposal of hazardous waste". Restrictions may include "activities on, over, or under the land, including, but not limited to, a prohibition against building, filling, grading, excavating, or mining" without the written permission of the DTSC.

This bill requires the DTSC to "notify the planning and building department of each city, county, or regional council of governments when a land use restriction has been recorded, and would require the planning and building dept. to take specified action upon receiving the notification, therby imposing a state-mandated local program". The DTSC has compiled a list of properties subject to deed restrictions which is used to notify various building and planning departments in local jurisdictions.

(There have been no Hazardous Waste Property/Border Zone Property designations since the law's inception.)

MAP ID NO.	SITE NAME	ADDRESS	CITY	ZIP

As of the date listed above, no sites listed in this database are located within a one half mile radius of the subject property.

CAL-SITES (ASPIS)

The information presented in this report is updated to October 31, 1991.

Developed under Section 25359.6 of the Health and Safety Code, the California EPA Department of Toxic Substance Control (TSC) database contains a listing of potential and known hazardous waste sites and the current Rural Site Evaluation Program. TSC staff have interviewed officials from county health agencies, local fire departments, county agricultural commissioners, and other local agencies that could reasonably be expected to have information regarding potential waste sites. The records of the Regional Water Quality Control Boards, Department of Fish and Game and other state environmental regulatory agencies are also researched. TSC staff also review historical land use data sources to generate lists of potential sites.

Information concerning most of these sites should be considered preliminary although most confirmed sites from this database are merged into the AWP database once they have been hazard ranked. This database currently contains more than 26,000 sites in the State of California. Many of these sites are currently identified as requiring no further action based on TSC determination that no release had occurred or if a release may have occurred, it did not represent a significant threat to the public or the environment.

HAZARDOUS WASTE INFORMATION SYSTEMS (HWIS)

The information presented in this report is updated to September 30, 1991.

The California Department of Health Services, Toxic Substances Control Division, has developed and maintained lists of hazardous waste generators and hazardous waste treatment storage and disposal facilities in the State of California, pursuant to the Hazardous Waste Control Law (Health and Safety Code Section 25100 et seq.), and the Hazardous Waste Management Act of 1976 (Health and Safety Code Section 25179.1 et seq). In addition, this law requires all counties to prepare and submit hazardous waste management plans. To assist the counties,the Toxic Substances Control Division maintains lists containing generation and disposal data within each county. This information has been assembled by the Toxic Substances Control Division from manifest reports required from hazardous waste generators. This database currently lists over 50,000 sites in the state of California.

SOLID WASTE INFORMATION SYSTEM (SWIS)

The information presented in this report is updated to October 1, 1991.

The California Integrated Waste Management Board maintains an inventory list of both open as well as closed and inactive solid waste disposal facilities and transfer stations pursuant to the Solid Waste Management and Resource Recovery Act of 1972, Government Code Section 2. 66790(b). Generally, the California Integrated Waste Management Board learns of locations of disposal facilities through permit applications and from local enforcement agencies. Since 1977, the SWIS system has grown to track approximately 1000 solid waste disposal facilities and transfer stations in the State of California.

MAP ID NO.	SWIS ID	FACILITY NAME	ADDRESS	CITY	ZIP	OPERATIONAL STATUS	WASTE RECEIVED	TONS/DAY

As of the date listed above, no sites listed in this database are located within a one half mile radius of the subject property.

LEAKING UNDERGROUND STORAGE TANKS (LUST)

The information presented in this report is updated to:

Region 1 - January 4, 1992: North Coast

Region 2 - November 5, 1991: San Francisco Bay Area

Region 3 - October 20, 1991 : Central Coast

Region 4 - November 19, 1991 : Greater Los Angeles Area

Region 5 - November 26, 1991 : Central Valley

Region 6 - October 1, 1991 : Lahontan Area

Region 7 - January 3, 1992 : Colorado River Basin

Region 8 - December 5, 1991: Santa Ana Area

Region 9 - January 31, 1992 : Greater San Diego Area

The California State Water Resources Control Board, in cooperation with the Office of Emergency Services, compiles lists of all leaks of hazardous substances from underground storage tanks in the State of California pursuant to Section 25295 (b) of the Health and Safety Code. The nine regional boards maintain information on all reported leak cases within their jurisdiction, both for those where the regional board and where other local agencies take the lead in overseeing investigations and remedial actions. Although the data reported here represents sites where at least one leak is known to have occurred, it is not uncommon for more than one tank to have leaked at a given site or cleanup case. The total number of cases reported statewide is over 5,900.

KEY TO TERMS/ABBREVIATIONS USED IN THIS REPORT:

N/A: An entry having "N/A" in a field indicates no information is available at this time.

CERCLIS:

* *EVENT TYPE* - Evaluation and disposition information:

AR = Administrative Record
AS = Aerial Survey
CO = Combined RI/SI
CR = Remedial Community Relations
CT = Community Relations Technical Assistance
DA = Design Assistance
DS = Discovery
ED = Endangerment Assessment
EO = EDO
ER = Expedited Response Action
ES = Expanded Site Inspection
EV = Evacuation State/Local
FM = Forward Planning/Management Assistance
FP = Forward Planning Activity
(for Historical Purposes only)
FS = Feasibility Study
(Primarily for Historical Purposes)
GS = Geophysical Support/Mapping
HA = Health Assessment
HR = Final Hazard Ranking Determined
IM = Initial Remedial Measure
IR = Immediate Removal
LA = Long-Term Response
LR = Long-Term Response
MA = Management Assistance
NA = NAA
ND = NPL Deletion Process
NF = Final Listing on NPL
NP = Proposal to NPL
NR = Removed from Proposed NPL
OH = Other Event
OM = Operations and Maintenance
OS = Oversight of State by Fund
PA = Preliminary Assessment
PD = Public Comments on Deletion Package
PR = Planned Removal
RA = Remedial Action
RC = Removal Community Relations
RD = Remedial Design
RI = Remedial Investigation
(Primarily for Historical Purposes)
RM = RAMP -- Remedial Action Master Plan
(for Historical Purposes only)
RO = ROD
RS = Removal Investigation
RV = Removal Action
SE = Site Access
SI = Site Inspection
TA = Technical Assistance
TG = Community Relations Technical Assistance
TO = Topographical Mapping
TR = Temporary Relocation
UR = Underground Storage Tank Removal
WP = RI/FS Workplan Approved by HQ
Z_ = (For Internal Office Use only)

* *EVENT QUALIFIER* - Actual or anticipated actions and priorities:

C = Clean up.
D = Deferred.
E = Administrative record complilation / remedial event.
G = Recommended for HRS scoring.
H = Higher priority.
L = Lower priority.
M = Medium priority.
N = No further remedial action planned.
S = Stabilization.
U = Unknown.
V = Administrative record complilation / removal event.

* *REGIONAL UTILITY DESCRIPTION* - Provides information developed by U.S. EPA's regional office about the nature of contamination at a specific site.

NPL:

* *NPL/STATUS INDICATOR* -

"D" - Deleted from final NPL.
"F" - Site qualified to receive CERCLA remedial funding.
"N" - Not currently nor formerly on proposed or final NPL.
"O" - Non-site indicator - not a valid site as defined in CERCLIS.
"P" - Proposed for inclusion on the NPL.
"R" - Removed from the proposed NPL and no longer considered for the final NPL.
"S" - Has SCAP plan remedial activities.

Copyright © 1990 by Vista Environmental Information, Inc., San Diego, California

NPL continued...

* *SITE DESCRIPTION* - Provides a brief explanation of the contaminants and circumstances of a particular site.

CORTESE:

* *SOURCE* - Identifies which agency reported the site for publication in the Hazardous Waste and Substances Sites List. Codes for each agency are identified on the original report page for the Hazardous Waste and Substances Sites List.

* *PROBLEM* - Identifies the cause/source of the contamination or the facility affected.

AWP (FORMERLY BEP):

* *SITE INFORMATION* - Provides a brief description of the hazardous wastes on the site, the potential threat to public health and the status of the site.

CAL-SITES (FORMERLY ASPIS):

* *STATUS CODE* - Indicates the current status of a site and whether it is scheduled for further investigation by DHS Toxic Substances Control Division.

"AWP"	"Annual Workplan" - in remediation.
"BKLG"	"Backlog" - potential AWP site which has been hazard ranked but which is not on the annual workplan.
"CNTY"	"County lead site" - not a candidate for the annual workplan and the local county has the lead.
"CERT"	"Certified" - has been remediated.
"COM"	"Certified Operation and Maintenance" - has been certified but is still in operation and maintenance.
"DLIST"	"Delisted" - taken off the AWP usually for administrative reasons, for example: if several sites are consolidated, the old sites could be given this status.
"EPA"	"EPA lead" - not on the NPL, yet EPA has assumed the lead.
"HRR"	"Hazard Ranking Required" - has had a Preliminary Endangerment Assessment or equivalent evaluation and needs to be hazard ranked. After hazard ranking it would normally receive a ranking of AWP or BKLG.
"OAL"	"Other Agency Lead" - not on the AWP and has a lead agency other than the county, the RWQCB, EPA, or RCRA.
"NFA"	"No Further Action" - based on the information available on the site's potential to threaten public health and/or the environment, DTSC staff have judged this site to require no further departmental action.

Copyright © 1990 by Vista Environmental Information, Inc., San Diego, California

CAL-SITES (FORMERLY ASPIS) continued...

"PEARH" "Preliminary Endangerment Assessment Required, High priority" - judged by DTSC staff to have a high probability of posing a public health or environmental threat.

"PEARL" "Preliminary Endangerment Assessment Required, Low priority".

"PEARM" "Preliminary Endangerment Assessment Required, Medium priority".

"PRP" "Potential Responsible Party search required" - not on the AWP but needs a PRP search, after which would normally receive a ranking of AWP or BKLG.

"REFRC" "Referred to RCRA" - has been on the AWP or BEP in the past and is being mitigated under the lead of the permitting program.

"REFRW" "Referred to RWRQCB" - has been on the AWP or BEP in the past and is being mitigated under the lead of the Regional Water Quality Control Board.

"SSR" Site Screen Required. The site requires initial screening.

HWIS:

* GEN/TSD - Indicates whether the listed facility is a generator of hazardous waste or is a treatment, storage or disposal facility.

* STATUS CODES

C Remedial action (cleanup) in progress.

F No funds available (no responsible party or responsible party has insufficient funds, and no public funds available).

I Site investigation in progress (defining extent of problem).

N No action taken by lead agency (i.e., new case or backlog).

P Post remedial action monitoring in progress.

R Remedial action alternative evaluation in progress.

S Signed off: remedial action completed or deemed unnecessary.

O No Action
No action has been taken by the responsible party after the initial report of the leak.

1 Leak Being Confirmed
A leak is suspected at a site, includes inspection of the excavation, and tank and appurtenant plumbing to determine existence of leak.

3A Preliminary Site Assessment Workplan Submitted
A workplan\proposal has been requested of, or submitted by, the responsible party in order to determine whether groundwater has been, or will be, impacted as a result of a release from any underground tanks or associated piping.

3B Preliminary Site Assessment Underway
Implementation of a workplan addressing the above described tasks.

5C Pollution Characterization
Responsible party is in the process of installing additional monitoring wells and\or borings in order to fully define the lateral and vertical extent of contamination in soil and ground water and assess the Hydrogeology of the area. This phase of work may also include performing aquifer tests, soil gas surveys, continued ground water gradient determinations and monitoring, assessing impacts of surface and\or ground water.

5R Remediation plan
A remediation plan has been submitted evaluating long term remediation options. A proposal and implementation schedule for an appropriate remediation option has also beeen submitted. This phase of work may also include preparing and submitting the necessary information for any permits needed prior to implementation of the plan (NPDES or WDR).

7 Remedial Action
Implementation of corrective action plan.

8 Post Remedial Action Monitoring
Periodic ground water or other monitoring at the site, as necessary, in order to verify and/or evalutate the effectiveness of remedial activities.

9 Case Closed
The Regional Board and the Local Agency are in concurrence that no further work is necessary at the site.

9L Closed by county 9R: Closed by RWQCB

10 Cease and Abate Order

* REMEDIAL ACTION CODES

CB Containment Barrier -- install vertical dike to block horizontal movement of contaminant.

CD Cap Site -- install horizontal impermeable layer to reduce rainfall infiltration.

ED Excavate and Dispose -- remove contaminated soil and dispose in approved site.

ET Excavate and Treat -- remove contaminated soil and treat (includes spreading or land farming).

FP Remove Free Product -- remove floating product from water table.

GT Pump and Treat Ground Water -- generally employed to remove dissolved contaminants.

HU Treatment at Hookup -- install water treatment devices at each dwelling or other place of use.

IT Enhanced Biodegradation -- use of any available technology to promote bacterial decomposition of contaminants.

NA No Action Required -- incident is minor, requiring no remedial action.

NT No Action Taken -- no indication that action was taken.

RS Replace Supply -- provide alternative water supply to affected parties.

UK Unknown -- action not known, or unknown if action taken.

VE Vapor Extraction

VS,VT Vent Soil -- bore holes in soil to allow volatilization of contaminants.

COUNTY:

Class I	Hazardous Materials Accepted (No Radioactivity)	
Class II	Mixed Municipal rubbish	
Class III	Solid waste (concrete)	Type DB Debris Basin
Class LV	Large Volume transfer station	Type LF Landfill
Class SV	Small Volume transfer station	Type TS Transfer Station

NOTE: ALL DESIGNATIONS ARE SUBJECT TO CHANGE.

REPORT # 324910

VISTA

Dear VISTA Customer:

Our commitment is to provide you with accurate, timely and current information. We solicit your feedback if you have any questions or concerns about this report and it's contents. VISTA's report production process consists of six distinct steps. They are as follows (initials of VISTA staff performing this task for this report):

- Log Order - (____) - your order is logged into our production software. This includes information on your company, subject site, VISTA report number and invoice number.

- Digitize - (DGM) - the subject site is assigned a latitude and longitude. If you supply a map, this is used to determine the sites location. VISTA geocodes a street address or intersection using our mapping software and confirming the location with a paper street map (when available).

- Mentions - (DGM) - the zip codes and cities that are within your selected radius are determined. This allows VISTA to compile a list of environmental risk sites that are geocoded only to the zip code or city (approximately 5% of our database) that might be within your radius.

- Run Report - (DGM) - this is usually done by a member of our evening crew. They will process that days orders through our automated report generation system. They will also monitor the progress of the work through the system.

- QC & Fix - (____) - your report is subjected to a rigorous inspection to determine that all information is accurate and current. If a problem is found, it is immediately corrected so that our handling of the order remains timely.

- Copy & Send - (____) - this is where your order is assembled for mailing. Any special handling is identified and responded to at this point.

These six steps are at the heart of VISTA's report production process. The Operations team takes pride in the products we provide. We hope they meet with your satisfaction.

Sincerely,

Peter Minton	*Trudy Thekla*	*Luis Reyes*	*Steve Opgenorth*
Mike Pfeifer	*Kip Willett*	*Dawn Socolick*	*Suzanne Colver*
Dave Goddale	*Doug Minton*	*Christine Brockway*

NFA code descriptions: "-" indicates the agency did not supply this information; "Y" indicates there was "No Further Action" planned for the site (ASPIS/CAL-SITES) or "Case Closed" (LUST); "NO" indicates the agency did not mark the site "No Further Action" or "Case Closed", but does supply this information. For the CERCLIS database a "Y" indicates that all CERCLIS events for the site show an actual completion date and the most recent event indicates "no further remedial action planned."

Re: 2023 Annual Compliance Report
Former FMC Corporation Facility
495 East Brokaw Road
San Jose, Santa Clara County, California
Final Site Cleanup Requirements Order No. 00-092

Dear Ms. White:

Enclosed is the *2023 Annual Compliance Report* for the former FMC Corporation facility located at 495 East Brokaw Road, San Jose, Santa Clara County, California. The enclosed report presents the results of annual groundwater monitoring activities conducted from January through December 2023.

This report is submitted in accordance with Provision D.5 of Order No. 00-092, *Final Site Cleanup Requirements, Order No. 00-092; Final Site Cleanup Requirements and Rescission of Orders Nos. 90-032 and 92-053, FMC Corporation and 495 East Brokaw Road, LLC, 495 East Brokaw Road, San Jose, Santa Clara County, California*, as amended by the Modified Self-Monitoring Program approved by the State of California Regional Water Quality Control Board, San Francisco Bay Region (RWQCB) in a letter dated October 19, 2017.

2023 Semi-Annual Summary

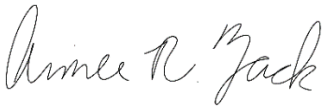
Work completed during 2023 under the Modified Self-Monitoring Program and Order No. 00-092 included:

- Preparation and submittal to the RWQCB of the 2022 Annual Compliance Report required by Provision D.5 of Order Number 00-092
- Annual groundwater level measurements
- Annual, Biennial, and Triennial groundwater sampling and analytical testing

If you have any questions or require additional information, please contact me at the address above or (612) 716-0176.

I certify under penalty of the law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who managed the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Sincerely,



Aimee Zack

1.0 INTRODUCTION

This report presents the annual groundwater monitoring results for the former FMC Corporation (FMC) facility located at 495 East Brokaw Road, San Jose, Santa Clara County, California (Site) (Figure 1). Monitoring was performed in February and March 2023 in accordance with the State of California Regional Water Quality Control Board (RWQCB), San Francisco Bay Region, Final Site Cleanup Requirements, Order No. 00-092 (RWQCB 2000), as amended by modifications to the Self-Monitoring Program (SMP) approved by the RWQCB in letters dated January 18, 2002 (RWQCB 2002) and October 19, 2017 (RWQCB 2017). An additional, voluntary, groundwater sampling event was completed in October 2023 as well, the results of which are discussed alongside those collected in the February/March event.

1.1 BACKGROUND

The 4.1-acre Site houses a 76,000-square-foot light-industrial retail building and is in a congested manufacturing neighborhood. As shown on Figure 1, the Site is located between the Bayshore Freeway (Highway 101) and the Nimitz Freeway (Interstate 880). The Site is bounded by Critchfield Mechanical, Inc. (CMI) (1901 Junction Avenue, a former Smurfit Stone property) to the northwest, Junction Oaks Properties to the northeast, Union Pacific Railroad to the southwest, and East Brokaw Road to the southeast. Figure 2 shows the current site layout.

The CMI facility began operating in 1968 under different owners as a corrugated box production plant. It was sold to Barry Swenson Builders in 2007. CMI acquired the property in 2008. The Junction Oaks property was occupied by A&B Painting from 1977 to 1981. Since 1981, Ryan Herco Industries has leased the Junction Oaks property as a pipe and equipment warehouse.

1.2 SITE OPERATIONS AND OWNERSHIP HISTORY

Site Operations

Site use prior to 1960 was agricultural. American International Aluminum Corporation constructed the bulk of the existing building on the Site in 1960 and used it as an aluminum extrusion and casting facility until approximately the end of 1962. Olin Chemical Corporation (then Olin Mathieson Chemical Corporation) conducted aluminum extrusion operations at the Site from early 1963 through mid-1966. FMC occupied the Site from 1966 until 1983, manufacturing military ordnance and logging

equipment and for parts packaging. After FMC ceased manufacturing operations at the Site in 1983, it leased the facility for storage until the property was vacated in January 1988. Aerial photographs show that the Site was unpaved until approximately 1980.

Site Ownership

Stolte, Inc. owned the property from February 1960 to May 1961 when ownership transferred to United California Bank. The Annuity Board of the Southern Baptist Convention assumed ownership in December 1962 and maintained control of the property until May 1966 when FMC purchased it. Ownership changed twice after FMC sold the property to 6000S Corporation in 1987. 6000S Corporation sold the property to 495 East Brokaw Associates in September 1988. 495 East Brokaw Associates later filed for bankruptcy, and 6000S Corporation reacquired the property pursuant to an October 1993 settlement of the bankruptcy proceedings. 495 East Brokaw Road, LLC, purchased the property from 6000S Corporation on January 19, 1999. Effective December 2, 2013, Brokaw San Jose LLC purchased the property from 495 East Brokaw Road, LLC.

The building on the Site has been leased to various businesses since the late 1980s. Currently, several tenants lease portions of the building and variously use their spaces for offices, manufacturing, and storage.

1.3 REGULATORY REQUIREMENTS

In February 1990, the RWQCB adopted Order No. 90-032, *Site Cleanup Requirements for FMC Corporation Ground Systems Division and 495 East Brokaw Associates for the Property Located at 495 East Brokaw Road, San Jose, Santa Clara County, California* (RWQCB 1990). Order No. 90-032 was amended by Order No. 92-053, *Site Cleanup Requirements amending Order No. 90-032 for FMC Corporation-Ground Systems Division and 495 East Brokaw Associates, 495 East Brokaw Road, San Jose, Santa Clara County* (RWQCB 1992). On August 16, 2000, the RWQCB adopted Order No. 00-092 for the Site. Order No. 00-092 rescinded previously adopted Order Numbers 90-032 and 92-053 and set final cleanup standards for areas of impacted groundwater.

The 95% upper confidence limit (UCL) for trichloroethene (TCE) and tetrachloroethene (PCE) concentrations within vadose zone soils (from the surface to a depth of 8.5 feet) were calculated in accordance with the United States Environmental Protection Agency (USEPA) protocol outlined in the *Methods for Evaluating the Attainment of Cleanup Standards – Volume 1: Soils and Solid Media*

(USEPA 1989). The results indicated that the 95% UCL for both TCE and PCE were below the respective USEPA Region 9 Preliminary Remediation Goals for residential soils. Therefore, Order 00-092 established soil cleanup standards for the Site.

On January 18, 2002, the RWQCB approved a request to revise the existing SMP. Groundwater monitoring has been performed in accordance with the revised SMP since first quarter 2002.

In May 2017, Parsons submitted the *495 East Brokaw Road Sampling Optimization Report* to the RWQCB (Parsons 2017). This report evaluated groundwater monitoring data from 2007 through 2016 and proposed a reduction in site monitoring frequency based on evaluation results. In October 2017, FMC received RWQCB approval (RWQCB 2017) to implement the recommendations outlined in the *495 East Brokaw Sampling Optimization Report*. The approved recommendations included: (1) reducing the sampling frequency of all wells to respective annual, biennial, and triennial; (2) reducing water level measurements from a semi-annual to an annual frequency; (3) reducing semi-annual reporting requirements to an annual basis; and (4) destroying monitoring wells W-5 and W-30. The first groundwater monitoring event under the modified plan was the February 2018 annual event. The second event was the February 2019 biennial event. Triennial sampling took place in February 2020. However, in advance of and following the EAB/ISCR injections implemented at the Site in March 2022 the Site monitoring program was voluntarily expanded and the sampling frequency was increased to provide sufficient data to evaluate the impacts of the remediation project. The EAB/ISCR project performed in 2022 and the monitoring schedule performed in 2023 are discussed further in this report.

1.4 SITE INVESTIGATION AND REMEDIATION

FMC began environmental investigations at the Site in 1986 and identified high boiling-point hydrocarbons and volatile organic compounds (VOCs) in soil and groundwater. Approximately 1,200 cubic yards of impacted soils were excavated from sumps and pits at the Site in 1987 and 1988. FMC also removed several sumps and clarifiers, vertical pipes, and two furnace pits.

In 1988, FMC completed further soil and groundwater investigations that confirmed VOC impacts were still present in shallow soil and groundwater. FMC reported these results to the RWQCB in the *Comprehensive Site Assessment Report - Soil and Ground-Water Conditions* in 1989 (EMCON). Order No. 90-032 required completion of site characterization. In response, FMC submitted an

Additional Soil and Ground-Water Investigation Report in April 1991 (EMCON 1991a) and an *Addendum to Additional Soil and Ground-Water Investigation Report* in June 1991 (EMCON 1991b).

In accordance with Orders No. 90-032 and 92-053, FMC submitted a *Remedial Alternatives Report* in April 1992 (FMC). The report recommended a combination of cap and slurry wall construction, storm sewer sleeving, and continued groundwater monitoring.

In accordance with the *Interim Remedial Status Report* dated January 31, 1996 (FMC 1996a), which was accepted by the RWQCB in a letter dated March 5, 1996 (RWQCB 1996a), FMC prepared the *Baseline Human Health Risk Assessment and Site-Specific Target Levels for Soil and Groundwater* in May 1996 (McLaren/Hart) and *a Revised Remedial Alternatives Report* in July 1996 (FMC 1996b). The *Revised Remedial Alternatives Report* recommended, among other things, that monitoring well W-31A be abandoned. Monitoring well W-31A was abandoned during first quarter 1997, following receipt of RWQCB approval in a letter dated December 12, 1996 (RWQCB 1996c).

In late 1996, FMC became aware of a unique opportunity to participate with the RWQCB in a research and development project to develop methods for setting site cleanup objectives based on the economic value of resources protected and/or restored. In an RWQCB letter dated October 17, 1996, titled *Development of Methodology to Quantify Groundwater Quality Objectives and Site Cleanup Objectives Based on Resource Value and Risk* (RWQCB 1996b), the Site was identified as a pilot project for basing cleanup objectives on resource value and risk. In March 1997, FMC submitted the Site as a pilot project, and Charlton International (CI) was hired as the consultant to perform these analyses.

In February 1999, the *In-Situ Remedial Alternatives Evaluation* (FMC 1999a) was submitted to the RWQCB. This report presented the then current understanding of site conditions, an evaluation of available data, a description of supplemental data collection activities, an evaluation of intrinsic biodegradation activities occurring at the Site, an evaluation of in-situ remediation alternatives, and an implementation plan. The report concluded and documented that the economic valuation approach would not be feasible for the Site. The proposed remedy was to stimulate anaerobic biodegradation activities by injecting either a benzoate/lactate mixture or hydrogen release compound (HRC®, a polylactate ester) using direct-push technology. HRC® injection was proposed as the remedial

alternative, subject to a bench-scale test and pilot study. The RWQCB approved the *In-Situ Remedial Alternatives Evaluation Report* on March 16, 1999 (RWQCB 1999).

The *Workplan for In-Situ Bioremediation Pilot Study Using HRC Injection* (FMC 1999b) was submitted to the RWQCB in May 1999. A pilot test was performed from May through November 1999 to evaluate the effectiveness of HRC® in stimulating anaerobic biodegradation of VOCs in soil and groundwater at the Site.

Full-scale implementation of enhanced bioremediation using HRC® began in May 2000 near the area of monitoring wells W-2, W-8, and W-9, which are shown on Figure 2. A second application of HRC® occurred in November 2001. The initial data evaluation was discussed in the October 2001 *Remediation Assessment Report, Full-Scale In-Situ Bioremediation Using HRC Injection* (Remediation Assessment Report) (FMC). Data evaluation was also provided in the October 2003 *Analytical Results and Analysis: Second Phase, Full-Scale In-Situ Bioremediation Using Hydrogen Release Compound (HRC)* letter report (FMC 2003b). The most recent related data evaluation for HRC® effectiveness was presented in the *Annual Compliance Report, Calendar Year 2006* (Parsons 2007).

FMC completed the two years of semi-annual enhanced biodegradation monitoring as proposed in the *Data Transmittal and Assessment Report* submitted to the RWQCB in June 2003 (FMC 2003a). The analytical results indicated that additional monitoring for enhanced biodegradation parameters was no longer warranted. FMC therefore discontinued monitoring for enhanced biodegradation parameters in 2006.

The ongoing site monitoring results were presented in the *Annual Compliance Report, Calendar Year 2004* (Parsons 2005a). The *Five-Year Status Report and Semi-Annual Monitoring Report January through June 2005* (Five-Year Status Report) (Parsons 2005b) documented site remedial activities and concluded that the application of HRC® successfully enhanced in-situ bioremediation of VOCs in site groundwater. However, hydrogen concentrations of less than 2 nanomoles (nM) in all monitoring wells indicated that the hydrogen electron donor needed to sustain an environment supportive of reductive chlorination was lacking. The in-situ bioremediation had stalled, and hydrogen was no longer being produced.

As stated above, the initial approach for treating VOC impacts at the Site involved injecting a proprietary polylactate solution to stimulate reductive dechlorination. This is also commonly known as anaerobic bioremediation. Although the anaerobic bioremediation process created chemically reducing conditions, the process stalled, as indicated by the low hydrogen concentration (less than 2 nM) and the presence of vinyl chloride (VC) in wells W-8 and W-9 along the fence line where the anaerobic bioremediation was conducted. Because anaerobic bioremediation stalled at VC, FMC proposed to augment the bioremediation process using in-situ chemical oxidation (ISCO).

The *Remedial Action Work Plan for Smurfit-Stone Container Corporation Property at 1901 Junction Avenue Adjacent to Former FMC Corporation* (Remedial Action Work Plan) was submitted to the RWQCB on April 5, 2006 (FMC). The RWQCB approved the work plan via e-mail on June 6, 2006. The Remedial Action Work Plan included two main tasks: (1) installation of supplementary monitoring wells on the Smurfit-Stone property and (2) ISCO via the injection of a proprietary sodium persulfate oxidant manufactured by FMC under the trade name Klosur®. To address the potential for VOCs to migrate from the Junction Oaks property onto the former FMC and Smurfit-Stone properties, zero-valent iron (ZVI) was injected at three boring locations in the northeast corner of the former FMC property.

The five new wells on the Smurfit-Stone property were constructed and sampled in August 2006. In September 2006, 91 ISCO injection points and three ZVI points were completed on the Smurfit-Stone and former FMC properties. At the RWQCB's request, the five new off-site wells were added to the SMP in 2010.

The first and second rounds of post-ISCO-injection water quality monitoring were conducted in November and December 2006. Based on the results of the November/December 2006 sampling, FMC determined that a second round of ISCO application was prudent. FMC summarized the ISCO application and groundwater monitoring results for the RWQCB on January 24, 2007. FMC met with the RWQCB on January 25, 2007, to discuss the data and the Round 2 ISCO. The Round 2 ISCO was completed in February 2007. Post-injection monitoring was conducted in March, April, and May 2007. Additional monitoring was conducted for the remainder of 2007, coinciding with a small-scale pilot study using ISCO and ZVI. The results of the small-scale pilot study were informally discussed with

the RWQCB and were used in the preparation of the documents described below. Analytical results from the off-site efforts were presented under separate cover.

In June 2009, FMC submitted two documents to the RWQCB. These were titled *Treatability Study for 1901 Junction Avenue, Barry Swenson Builder Property Adjacent to Former FMC Property* (FMC 2009a) and *Work Plan for Supplemental Investigation at 1901 Junction Avenue, Junction Oaks Property, and 495 East Brokaw Road, San Jose, Santa Clara County* (FMC 2009b). These documents outlined proposed future activities related to the Site. Both documents have since been approved by the RWQCB (2009a and 2009b). The results of the activities described in the documents were submitted to the RWQCB on October 29 and June 30, 2010, respectively. In a letter dated December 15, 2010, the RWQCB conditionally approved the June 30, 2010, implementation letter report for the *Work Plan for Supplemental Investigation at 1901 Junction Avenue* (FMC 2009b).

Findings from the investigation indicate that VOC contamination from the unsaturated zone may be a source of ongoing discharge to the saturated zone. The RWQCB subsequently requested an additional investigation work plan pursuant to Task C9 of Order No. 00-092. On February 16, 2011, the RWQCB approved the October 29, 2010, *Treatability Study Work Plan Results, 1901 Junction Avenue Property, San Jose, Santa Clara County, California, RWQCB Final Site Cleanup Requirements Order No. 00-092* (FMC 2010) and requested that FMC submit a remedial action work plan. In a letter dated February 6, 2012, and submitted with the *Technical Memorandum – Review of Soil and Groundwater Impacts*, FMC stated that the remedial action work plan had been postponed with approval from the RWQCB pending further evaluation of additional potential source areas that may be contributing to overall impacts. The technical memorandum supported the conclusion that the adjacent Junction Oaks Property remains a contributing source of VOCs.

In 2019, TetraTech, on behalf of FMC, performed an investigation to determine the downgradient extent of groundwater impacts located off site at the CMI Facility. Nine grab groundwater samples were collected from 20 feet below ground surface (bgs), and four grab groundwater samples were collected from 50 feet bgs (TetraTech 2019). Based on the results from these samples, three new long-term monitoring wells were installed at CMI (W-42, W-43, and W-44) in January 2020 (Figure 2). The wells were also developed, surveyed, and sampled under the direction of Tetra Tech in January 2020 (TetraTech 2020). Parsons sampled the wells quarterly throughout 2020 and incorporated them

into the annual sampling program to be carried forward in the future. On December 21, 2021, Tetra Tech, on behalf of FMC, submitted the *Off-Site Groundwater Sampling Report* documenting the results of four consecutive quarters of groundwater sampling at three new monitoring wells located in the downgradient extent of groundwater impacts from the former FMC property.

On March 17, 2021, the RWQCB held a meeting with FMC to discuss the potential for a path to closure for the Site. The meeting was initiated by the RWQCB in part due to their review of the results from the neighboring Junction Oaks Property that showed a successful implementation of injected emulsified vegetable oil. The data indicated that concentrations of TCE in the targeted wells had been dramatically reduced from a range of 300 to 400 micrograms per liter (µg/L) to non-detect after the injections. Considering the successful enhanced bioremediation on the neighboring property, a treatability study was conducted to investigate two treatment options ISCO and combined enhanced anaerobic bioremediation and in-situ chemical reduction [EAB/ISCR] to accelerate removal of chemicals of concern (COCs) and determine the appropriate treatment design parameters for full-scale implementation.

Parsons prepared the *Revised Remedial Action Plan* (RAP) (2021) based on the treatability study results, which were described in the *Treatment Option Treatability Study Report*. The RAP recommended that combined EAB/ISCR be injected into the subsurface from the interval between 10 and 25 feet bgs for continued treatment of VOCs. The Revised RAP was approved by the RWQCB on February 14, 2022.

The EAB/ISCR injection focused on treating an estimated 8,420-square-foot area in the upgradient part of the VC concentration contour of 100 µg/L (the VC treatment area) and three separate 475-square-foot areas where residual PCE and TCE contamination were present at the Site (the PCE/TCE treatment areas). The EAB/ISCR injections targeted a 15-foot-thick treatment zone from a depth of approximately 10 to 25 feet bgs. Regenesis, under Parsons' supervisions, co-injected 3-D Microemulsion® (3DME), CRS® (Chemical Reducing Solution), and Bio-Dechlor INOCULUM® Plus at each of the 55 injection points. Injection activities began March 23, 2022, and concluded April 1, 2022.

Four post-injection sampling events were conducted to evaluate the EAB/ISCR injection performance. The first post-injection sampling event was conducted on May 5 and 6, 2022. The second, third and

fourth sampling events, respectively, were conducted on August 2 and 3, 2022, November 7 and 8, 2022, and February 27 and 28, 2023. The EAB/ISCR injection was successful at lowering residual TCE concentrations at the Site to below the maximum contaminant level (MCL). The 99% reduction in TCE concentrations detected at monitoring wells W-4 and W-6, post-injection, are strong examples of successful remediation at the Site. Trend graphs of injection performance are available in Appendix C. More detailed information on the injection performance can be found in the *Enhanced Anaerobic Bioremediation and In-situ Chemical Reduction Completion Report* (Parsons 2023b).

1.5 REPORT ORGANIZATION

Following this introductory section, Section 2 describes project work performed during the 2023 annual groundwater sampling event and the voluntary event performed in October 2023. Section 3 presents monitoring results for the February/March and October 2023 events. Section 4 summarizes principal findings of the work performed during 2023. Section 5 provides full references for documents cited in this report. Tables, figures, and appendices follow the text.

2.0 FIELDWORK PERFORMED DURING THE 2023 ANNUAL PERIOD

FMC completed the following work under the modified SMP and Order No. 00-092 during the 2023 annual period:

- Preparation and submittal to the RWQCB of the *2022 Annual Compliance Report* (Parsons 2023a) required by Provision D.5 of Order Number 00-092
- Annual groundwater level measurements
- Annual, biennial, and triennial groundwater sampling and analytical testing

In accordance with the modified SMP, all monitoring wells were sampled during the February/March 2023 event to comply with the annual, biennial, and triennial sampling schedule. All three sampling schedules coincided in 2023. An additional round of groundwater monitoring was also completed in October 2023 to further assess the impacts of the EAB/ISCR project conducted in 2022. All site monitoring wells were sampled during the October 2023 event as well.

The work completed during 2023 is discussed below as required by Order Number 00-092.

2.1 GROUNDWATER LEVEL MEASUREMENTS

The modified SMP requires annual recording of groundwater level measurements in site monitoring wells. The groundwater elevation data were used to construct contours of the shallow water-bearing zone. Groundwater elevation data for March 2 and October 17, 2023, are presented respectively in Tables 1a and 1b; contours for the groundwater elevations are shown in Figures 3a and 3b. Historical groundwater level measurement data are provided in Appendix A.

2.2 GROUNDWATER SAMPLING AND ANALYTICAL TESTING

Annual groundwater samples were collected in February/March 2023 in accordance with the modified SMP. FMC voluntarily added RSK-175 (dissolved gasses) to the sampling plan to help further assess the impacts of the 2022 EAB/ISCR project. The monitoring results for this event are summarized in Section 3.0. Historical VOC concentrations are provided in Appendix B.

2.3 ADDITIONAL SITE WORK

The remediation completion report *Enhanced Anaerobic Bioremediation and In-situ Chemical Reduction Completion Report* (Parsons 2023b) was submitted to the Water Board on June 30, 2023. As stated above, an additional round of voluntary groundwater sampling was conducted in October 2023, the results of this sampling event are described alongside the annual results in Section 3.0 of the report. No additional site work was completed during the reporting period.

3.0 GROUNDWATER MONITORING RESULTS

The groundwater monitoring results for February/March and October 2023 are presented below. Activities included measuring groundwater elevations and collecting groundwater samples from wells located on or adjacent to the Site. The work was performed in accordance with the FMC California Operations and Maintenance Portfolio Quality Assurance Project Plan (QAPP) (Parsons 2022).

3.1 GROUNDWATER ELEVATIONS AND FLOW DIRECTION

Depth to groundwater was measured in 18 groundwater monitoring wells on March 2 and October 17, 2023. Depth to water was not collected at monitoring location W-9 due to the accumulation of insoluble lipid deposits at the water surface, preventing the water level meter from accurately indicating depth to water surface. The lipid deposits are an anticipated result of the 2022 EAB/ISCR project derived from the 3-D Microemulsion solution. The 3-D Microemulsion solution incorporates esterified lactic and fatty acids. Upon injection, the lactic acid dominates serving to initiate and stimulate anaerobic dechlorination. Over time the controlled release of fatty acids dominates the environment, acting to continue microbial stimulation. The buildup of lipids in W-9 is an effect of the controlled-release fatty acids accumulating in the treatment area. Tables 1a and 1b present the March and October 2023 water level measurements and water surface elevations calculated for each monitoring well. A groundwater elevation contour map was prepared for the shallow water-bearing zone for the March and October 2023 events (Figures 3a and 3b).

Groundwater levels measured in March and October 2023 were, respectively, 1.07 foot and 0.42 foot higher than the groundwater elevation recorded during the February 2022 event. The groundwater flow direction within the shallow water-bearing zone in March 2023 was generally toward the southwest, which deviates slightly from the historical direction of a more westerly direction. The groundwater flow direction within the shallow water-bearing zone in October 2023 was generally toward the west.

Historical groundwater elevations are presented in Appendix A.

3.2 GROUNDWATER QUALITY DATA

In accordance with the modified SMP, all wells were scheduled to be sampled in 2023 to comply with the annual, biennial, and triennial sampling schedule. All three sampling schedules coincided in 2023.

Groundwater samples were analyzed for VOCs in accordance with USEPA Method 8260B. Beginning in February 2019, FMC voluntarily added analysis of dissolved gases in accordance with USEPA RSK-175 to all site monitoring wells. This method was added to help assess the impact of remediation efforts implemented at the neighboring Junction Oaks property and to determine the status of dechlorination on the FMC property. Field parameters, including pH (potential of hydrogen), electrical conductivity, and turbidity were documented during purging and sample collection.

VOC and dissolved gas concentrations for samples collected in February/March and October 2023 are respectively summarized in Tables 2a and 2b. Select COC concentrations in groundwater monitoring wells are shown on Figures 4a and 4b for the respective monitoring events. Figures 5a, 6a, 7a and 8a show concentration contours respectively for PCE, TCE, *cis*-1,2-dichloroethene (*cis*-1,2-DCE), and VC for the event conducted in February/March 2023. Figures 5b, 6b, 7b and 8b show concentration contours for the October 2023 event. Historical VOC concentrations are presented in Appendix B. Trend graphs are provided in Appendix C and have been arranged in order of upgradient locations (W-1, W-10, W-29, and W-35), treatment area locations (W-2, W-4, W-6, W-9, W-13, W-36, and W-39), and downgradient locations (W-8, W-37, W-38, W-40, and W-41). Certified analytical reports, chain-of-custody documentation, and daily field sampling logs for samples analyzed during these events are kept on file and are available for review upon request.

VOCs detected above their respective State of California Department of Public Health MCLs during the February/March 2023 event included 1,1-dichloroethane (1,1-DCA), cis-1,2-DCE, *trans*-1,2-DCE, and VC. Reported total VOC concentrations are mostly below historical ranges because most monitoring locations have seen significant reduction since onsite injection was completed in 2022. The most significant reduction of total VOCs is from monitoring wells that were within the treatment area. Those locations are W-2 (98% reduction), W-9 (99% reduction), W-36 (90% reduction), and W-39 (32% reduction). While most locations within the treatment area have had reductions in total VOCs, other monitoring locations outside the treatment area remain within historical ranges. 1,1,1-trichloroethane (1,1,1-TCA), 1,1-DCE, benzene, PCE, and TCE were not detected above MCLs in any wells in February/March 2023.

VOCs detected above their respective State of California Department of Public Health MCLs during the October 2023 event included 1,1-DCA, cis-1,2-DCE, *trans*-1,2-DCE, TCE, and VC. As stated

above, reported total VOC concentrations are mostly below historical ranges because most monitoring locations have seen significant reduction since onsite injection was completed in 2022. 1,1,1-TCA, 1,1-DCE, benzene, and PCE were not detected above MCLs in any wells in October 2023.

PCE was detected in two monitoring wells (W-1 and W-13) in the February/March event and in three monitoring wells (W-1, W-6, and W-13) in the October event. The concentration was below the MCL of 5 µg/L in all wells for both events. Concentrations in all other wells were non-detect and consistent with historical results. W-13 has seen a significant reduction in PCE since implementation of the 2022 EAB/ISCR project. PCE was detected at 14 µg/L in W-13 in February 2022 prior to the injections. After the injections, PCE detections in W-13 reduced to 0.52 µg/L in February/March 2023 and 1.1 µg/L in October 2023.

During the February/March 2023 event, TCE was detected in 15 wells (W-1, W-2, W-4, W-6, W-9, W-10, W-13, W-35, W-36, W-37, W-38, W-39, W-40, W-41, and W-42). All detections were below the MCL of 5 µg/L. Significant reduction in TCE occurred in monitoring wells W-4 (99% reduction), W-6 (98% reduction), W-13 (92% reduction), and W-39 (80% reduction). During the October 2023 event, TCE was detected in W-6 at 7 µg/L, slightly above the MCL of 5 µg/L. This detection is an increase in TCE concentration from the February/March 2023 event (0.60 µg/L). During the October 2023 event, TCE was detected in W-13 at 4.7 µg/L. This detection is an increase in TCE concentration from the February/March 2023 event (1.4 µg/L). The increase in TCE at these locations can be attributed to the dechlorination of PCE. Fluctuations of daughter products like TCE, cis-1,2-DCE, trans-1,2,-DCE and VC are expected to occur as dechlorination of the parent constituents continue. In October 2023, TCE was detected in 12 locations, 11 of which were below the MCL. In October, detected concentrations of TCE ranged from 0.18 J µg/L (W-36) to 7.0 µg/L (W-6).

For both the February/March and October 2023 events, *cis*-1,2-DCE was detected in all monitoring wells except W-10, W-29, W-43, and W-44. Detected concentrations were below the MCL in wells W-1, W-2, W-9, and W-42 and above the MCL in W-4, W-6, W-8, W-13, W-35, W-36, W-37, W-38, W-39, W-40, and W-41. Detected concentrations of *cis*-1,2-DCE ranged from 0.54 µg/L in W-1 to 620 µg/L in W-41 during the February/March 2023 event. During the October 2023 event, *cis*-1-2-DCE ranged from 0.35 J[1] µg/L (W-1) to 610 µg/L (W-37) and were within the historical concentration

[1] J is a laboratory qualifier indicating an estimated value.

ranges for all wells. In general, concentrations of *cis*-1,2-DCE remained stable or declined across the Site. Significant reduction occurred in monitoring wells W-2 (99% reduction), W-9 (99% reduction), W-36 (96% reduction) and W-39 (53% reduction). In wells W-4 and W-13, cis-1,2-DCE has increased due to the degradation of TCE as a result of the EAB/ISCR injections completed in 2022.

In the February/March 2023 event*, trans*-1,2-DCE was detected in all but six monitoring wells (W-1, W-10, W-29, W-42, W-43, and W-44). Detections at monitoring wells W-37, W-40, and W-41 were above the MCL. Detected concentrations ranged from 0.28 J µg/L (W-35) to 35 J µg/L (W-37) and were within the historical concentration range for all wells. Concentrations in all other remaining wells were stable. In the October 2023 event, *trans*-1,2-DCE was detected in all but eight monitoring wells (W-1, W-9, W-10, W-29, W-36, W-42, W-43, and W-44). Detections at monitoring wells W-37, W-40, and W-41 were above the MCL. Detected concentrations ranged from 0.27 J µg/L (W-2) to 35 µg/L (W-37) and were within the historical concentration range for all wells.

As one of the last daughter products in the chain of dechlorination, VC will have the most fluctuations and will likely increase in the treatment area locations before it is degraded. This is seen in the results from the 2023 sampling events where some historically non-detect locations have detections above the MCL of 0.5 µg/L. An example of this is W-13, which was non-detect for VC in February 2022 and had a detection of 17 µg/L in February 2023. Overall, however, there has been a reduction in VC at the Site. During the February/March 2023 event, VC was detected in all but eight monitoring wells (W-1, W-10, W-29, W-38, W-40, W-42, W-43, and W-44). Detected concentrations ranged from 0.44 J µg/L in W-4 to 220 µg/L in W-39. During the October 2023 event, VC was detected in all but nine locations (W-1, W-9, W-10, W-29, W-38, W-40, W-42, W-43, and W-44). Detected concentrations ranged from 0.83 µg/L in W-4 to 280 µg/L in W-39.

Trends observed in total VOC concentrations indicated that PCE, TCE, and cis-1,2-DCE concentrations have been reduced as much as three orders of magnitude since remediation efforts began, most dramatically seen in W-9. VOC concentration trends were stable or decreasing for most site wells. Trend graphs for the parameters discussed above for individual monitoring locations are available in Appendix C.

3.3 QUALITY ASSURANCE/QUALITY CONTROL

A comprehensive system of quality assurance/quality control (QA/QC) measures was implemented to provide qualitative and quantitative checks on data quality for the February, March, and October 2023 sampling event. Field QA/QC measures utilized during this event included the collection of field duplicate samples, additional volume for the analysis of matrix spike/matrix spike duplicate (MS/MSD) samples, trip blanks, equipment blanks, and field blanks. Laboratory QA/QC measures included the analysis of batch QC, including laboratory control samples (LCS), surrogate spikes for organic analyses, method blanks, and the evaluation of holding times. The results of the field and laboratory QA/QC measures are discussed below in terms of field and laboratory blanks, accuracy, precision, and data usability.

A complete Data Quality Assessment Report is presented in Appendix D. Field and laboratory QA/QC for the two sampling events are provided in Tables 3a through 4b.

3.3.1 SAMPLE PRESERVATION AND HOLDING TIME

All samples were delivered on ice and were stored by the laboratory at the required temperature (0-6°C).

The sample holding time was calculated using the sample collection date listed on the chain-of-custody form and the preparation and/or analysis dates provided in the laboratory report. The samples were properly preserved, prepared and analyzed within the required holding times except as follows. The pH of VOC samples cannot be verified until after analysis, and it was noted that the pH of some samples did not meet criteria. The technical holding time for analysis of VOC compounds (pH >2) is 7 days. The following samples were received with a pH >2 and were analyzed after the 7-day holding time for unpreserved samples: W-37-030123 and W-39-101823. The detected VOC results in the two samples were qualified “J” as estimated, and non-detect results were qualified “R” as rejected.

The results qualified due to holding time exceedance are detailed in the data validation report (DVR) included as Attachment A of Appendix D.

3.3.2 FIELD AND LABORATORY BLANKS

Blank samples analyzed as part of the overall QA/QC program are used to evaluate potential sources of contamination. Blanks collected in the field that are associated with the February, March, and October sampling events included trip blanks and field blanks. Method blanks were analyzed by the

laboratory in each batch of samples associated with the samples. Trip blanks were submitted in each cooler that contained samples for volatiles analysis.

Three trip blanks were associated with the VOC field samples. The trip blanks consisted of vials of laboratory-pure water that were sent to the field with the sampling supplies. Trip blanks are never opened in the field but are kept with the sampling supplies inside the coolers because they are used to evaluate possible cross-contamination resulting from sample storage and shipping. One set of trip blank vials was submitted in every cooler that contained samples for VOC analysis. The trip blanks were non-detect for all target VOCs except as follows. Dichlorodifluoromethane was detected below the reporting limit in the trip blank collected on March 1, 2023. A similar detection was found in the storage blank included in the designated storage location that the trip blank and field samples were also stored. Since results for dichlorodifluoromethane were non-detect in the associated field samples, data quality was not impacted, and results were not qualified.

Two field blanks were collected in association with the field samples. This blank was collected by pouring the laboratory-provided water directly into the associated sample containers in the field. Field blanks, also known as ambient blanks, evaluate the possible presence of ambient contamination at the Site. The field blanks were non-detect for all target analytes except as follows. Methane was detected below the reporting limit in the field blank collected on 2/27/23. Methane and chloroform were detected below the reporting limit in the field blank collected on October 19, 2023. Results for methane in the samples detected below the reporting limit were qualified “U” as non-detect at the reporting limit. All other sample results associated with the field blanks were not qualified because the methane results were detected above the reporting limit and greater than five times the method blank concentration. Chloroform was non-detect in all associated field samples; therefore, data quality was not impacted, and results were not qualified.

An equipment blank and decontamination (source) blank were not collected. They were not applicable because the field samples were collected using a peristaltic pump and disposable tubing.

The laboratory prepared and analyzed method blanks with each batch for all methods, as required. The method blanks were non-detect for the analytes of interest except as follows. Sec-butylbenzene was detected below the reporting limit in the method blank included in batch 657966. Dichlorodifluoromethane was detected above the reporting limit in the method blank included in batch

659852. Since the samples associated to these method blanks were non-detect for sec-butylbenzene and dichlorodifluoromethane, data quality was not impacted, and results were not qualified. Methylene chloride was detected below the reporting limit in the method blank included in batch 378733. Results for methylene chloride in the samples detected below the reporting limit were qualified "U" as non-detect at the reporting limit. All other samples associated with this method blank were non-detect for methylene chloride; therefore, data quality was not impacted, and results were not qualified.

3.3.3 ACCURACY

Accuracy is defined as the agreement between a measured value and the known or true value. Accuracy for this data set was evaluated using the percent recovery (%R) obtained from the surrogate spikes (if applicable), MS/MSD samples, LCS and LCS duplicate (LCSD), if analyzed.

The laboratory analyzed surrogate spike compounds as required by the method. All surrogate spike recoveries were within acceptance criteria.

Additional volume was collected from well W-41 for MS/MSD analysis. All MS/MSD recoveries were within acceptance criteria. MS/MSD recoveries are not evaluated for analytes where the spike amount is greater than four times the spike amount.

The laboratory analyzed an LCS or LCS/LCSD pair in each batch associated with samples from this Site. All LCS/LCSD recoveries were within acceptance criteria except as follows. The LCS and/or LCSD in batch 658376 and 658734 recovered high and outside criteria for one or more of the following analytes: 2,2-dichloropropane and vinyl acetate. These two analytes were non-detect in the associated samples; therefore, data quality was not impacted, and results were not qualified.

Overall accuracy was considered acceptable.

3.3.4 PRECISION

Precision is defined as the degree to which repeated measurements taken under the same conditions yield similar results. Precision measures the reproducibility of the data and was evaluated using the relative percent difference (RPD) obtained from the laboratory duplicate, MS/MSD, and LCS/LCSD concentrations. Precision is further evaluated by comparing the field duplicate analyte results.

Additional volume was collected from well W-41 for MS/MSD analysis of VOCs. In lieu of an MS/MSD, the laboratory analyzed a duplicate for RSK-175 analysis. The laboratory duplicate was

analyzed on the same well as the MS/MSD. All MS/MSD and laboratory duplicate RPDs were within precision acceptance criteria.

The laboratory analyzed an LCS/LCSD pair in one or more analytical batches. All LCS/LCSD RPDs were within precision acceptance criteria.

Four field duplicates were collected for this data set. Duplicate field samples were collected from the same source as the parent samples using identical sampling procedures. The duplicate samples were submitted "blind" to the laboratory. Both the parent and duplicate samples were analyzed using the same USEPA analytical methods. All target compounds met precision criteria for the field duplicate pairs.

Overall precision was considered acceptable.

3.3.5 DATA USABILITY

Data usability is assessed by quantitatively evaluating data precision and accuracy and by qualitatively evaluating the results of blank sample analyses. The results of the QA/QC measures described above showed an acceptable degree of precision and accuracy, and a lack of any significant cross-contamination.

A total of 117 VOC results were qualified "R" as rejected due to holding time exceedance. All sample data qualified is discussed in the Data Quality Assessment Report (Appendix D). The groundwater data from this data set is generally consistent with the historical data.

All data are usable as qualified, with the exception of the rejected data points. Overall data quality was sufficient to fulfill the objectives of the project and the data is therefore considered valid.

4.0 SUMMARY

The work completed during 2023 under the modified SMP and Order No. 00-092 included:

- Preparation and submittal to the RWQCB of the *2022 Annual Compliance Report* (Parsons 2023a) required by Provision D.5 of Order Number 00-092
- Annual groundwater level measurements
- Annual, biennial, and triennial groundwater sampling and analytical testing

Groundwater elevation contours for both 2023 events indicate that the direction of groundwater flow was to the southwest in March and to the west in October, which is consistent with historical observations.

VOCs detected above their respective MCLs in February 2023 included 1,1-DCA, *cis*-1,2-DCE, *trans*-1,2-DCE, TCE, and VC. In general, VOCs were dramatically reduced, with as much as 99% reduction. Other locations outside of the 2022 injection treatment area were within their respective historical ranges during the February/March and October 2023 sampling events. VOC concentration trends were stable or decreasing for most site wells.

Field and laboratory QA/QC were conducted as required and met the acceptance criteria, except as noted above.

Based on the current concentrations and data trends following the completion of the remedial injections onsite as well as at the neighboring Junction Oaks Property, FMC intends to submit a Low Threat Closure Assessment in early 2024. FMC plans to complete a final round of annual groundwater sampling in January 2024 to complete two years of post-injection monitoring.

Notes:

All results reported in µg/L (micrograms per liter).

MCL: Primary Maximum Contamintant Level (California EPA)

<: Denotes the analyte was not detected at or above the concentration listed.

J: Reported value should be considered estimated.

R: Result was rejected as the sample was analzed outside of hold time. However, results were considered usable for the purposes of this project.

NA = No MCL was available for this analyte.

(D) = Field Duplicate

Bold indicates analyte detected above the laboratory method detection limit (MDL)

Gray shading indicates detection is above the MCL

[1] - Total VOC value includes all reported detections, including detections for analytes not included in this table. Total VOCs does not include RSK-175 parameters.

1,1,1-TCA: 1,1,1-Trichloroethane
1,1-DCA: 1,1-Dichloroethane
1,1-DCE: 1,1-Dichloroethene
cis-1,2-DCE: cis-1,2-Dichloroethene
trans-1,2-DCE: trans-1,2-Dichloroethene
TCE: Trichloroethene
PCE: Tetrachloroethene

TABLE 4a
SUMMARY OF ANALYTICAL QA/QC
FEBRUARY and MARCH 2023
FORMER FMC CORPORATION FACILITY
495 EAST BROKAW ROAD
SAN JOSE, SANTA CLARA COUNTY, CALIFORNIA

- **Analyses performed by:**

  Eurofins Environment Testing America (EETA)
  Northern California
  800 Riverside Parkway
  West Sacramento, CA 95605

  Eurofins Calscience
  2841 Dow Avenue
  Tustin, CA 92780

  Contact: Sheri Fama
  Phone: (657) 210-6368

- **Analytical methods used:**

EPA 8260B	Volatile Organic Compounds (GC/MS)
RSK-175	Dissolved Gases (GC)

- **Is the laboratory certified by the State of California for these analyses?**
  Refer to the accreditation/certification summary in the laboratory report for a list of analytes the laboratory is not certified for. This list may include analytes for which the agency does not offer certification.

Yes	X
No	

- **Analyses performed according to standard methods?**

Yes	X
No	

- **Sample hold times met?**
  Refer to the data validation summary report for details.

Yes	
No	X

- **Analytical results reported for all values above the Reporting Limit (RL)?**

Yes	X
No	

- **QA/QC analyses* run consistent with analytical methods?**

Yes	X
No	

- **QA/QC results meet all acceptance criteria?**
  Refer to the data validation summary report for details.

Yes	
No	X

- **QA/QC results and acceptance criteria kept on file?**

Yes	X
No	

* Includes method blanks, laboratory control spike, matrix spike, and duplicate analysis.

NOTES:

VOCs: Volatile organic compounds
µg/L: micrograms per liter
1,1,1-TCA: 1,1,1-Trichloroethane
1,1-DCA: 1,1-Dichloroethane
1,1-DCE: 1,1-Dichloroethene
1,2-DCA: 1,2-Dichloroethane
cis-1,2-DCE: cis-1,2-Dichloroethene
PCE: Tetrachloroethene
TCE: Trichloroethene
trans-1,2-DCE: trans-1,2-Dichloroethene
VC: Vinyl Chloride
NA: Not Analyzed
NS: Not Sampled
—: Data unavailable
<: Detected at or below the laboratory reporting limit
Bold: Detected above the method detection limit (MDL).

Total VOCs[1]: Total VOCs value may include detected concentrations for parameters not shown on this table. These parameters include 1,1,2-trichloroethane; 1,2-dichlorobenzene; 1,2-dichloropropane; 1,3-dichlorobenzene; 1,4-dichlorobenzene; benzene; bromodichloromethane; chlorobenzene; chloroethane; chloromethane; cis-1,3-dichloropropene; dichlorodifluoromethane; ethanol; methyl ethyl ketone; methyl tert butyl ether, toluene, and trichlorotrifluoroethane. Detections of these parameters have historically been infrequent at the Site.

re-analyzed[2]: August 2001 samples from wells W-2, W-8, PW-1, PW-2, and PW-5 were initially analyzed with elevated reporting limits. They were subsequently re-analyzed with lower reporting limits, but the hold time had been exceeded. The results of the initial and subsequent analyses are comparable; the data with the lower reporting limits are included within this table.

APPENDIX D
DATA QUALITY ASSESSMENT REPORT

APPENDIX D
DATA QUALITY ASSESSMENT REPORT

INTRODUCTION

This appendix presents data validation results for groundwater samples collected during the February, March, and October 2023 sampling events at 495 East Brokaw Road. Data review was performed in accordance with the procedures specified in the United States Environmental Protection Agency (USEPA) Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, November 2020). All data validation and evaluation of the data was conducted by Parsons. The data validation report (DVR) is presented in Attachment A.

Sample results were subjected to Level II review which included an evaluation of quality control (QC) summary results for sample temperature, holding times, surrogate recoveries, matrix spike and matrix spike duplicates (MS/MSD), laboratory control samples and duplicates (LCS/LCSD), laboratory duplicates, method blanks, equipment blanks, field blanks, trip blanks, and field duplicate samples.

Samples were collected and analyzed for volatile organic compounds (VOCs) by USEPA Method SW8260B and for the dissolved gasses methane, ethane, and ethene by RSK-175. Eurofins Environment Testing America (EETA) Northern California located in West Sacramento, California performed the analysis for VOCs that were collected during the February and March sampling event. Eurofins Calscience located in Tustin, California performed the analysis for RSK-175 and the VOCs collected during the October sampling event. Table 1 of the DVR presents the samples, the collection dates, and the associated analytical parameters.

DATA USABILITY

Quality control issues that were significant enough to result in rejection of the data are detailed in Attachment A. This includes results rejected due to hold time exceedance. No other major problems were documented for the analyses of the samples collected during this groundwater sampling event. The overall quality of the data was acceptable. Established project Data Quality Objectives (DQOs) were met as described in the QAPP with the exceptions noted in the DVR in Attachment A.

The data qualifiers used to qualify analytical results associated with QC parameters outside data quality objectives are defined below:

- J The analyte was positively identified; however, the result should be considered an estimated value.
- U Not detected above the level of the adjusted detection limit or quantitation limit.
- R The result has been rejected as unusable due to significant quality issues.

Results qualified as "J" and "U" are of acceptable data quality and may be used quantitatively to fulfill the objectives of the analytical program per USEPA guidelines. Results qualified "R" are not deemed usable for the purposes of this project. The DVR in Attachment A details the data qualifiers added as a result of the data review.

ACCURACY

Accuracy was evaluated using the percent recovery (%R) obtained from the surrogate spike compounds, the LCS/LCSD samples, and the MS/MSD samples. No accuracy outliers required data qualification as documented in the DVR in Attachment A.

PRECISION

Precision was evaluated using the relative percent difference (RPD) obtained from the LCS/LCSD concentrations and MS/MSD concentrations. Precision was further evaluated by comparing the laboratory and field duplicate analyte results. No precision outliers required data qualification as documented in the DVR in Attachment A.

REPRESENTATIVENESS

Representativeness expresses the degree to which sample data accurately and precisely represents actual site conditions. Representativeness has been evaluated by:

- Comparing actual analytical procedures to those described in the COC;
- Evaluating holding times;
- Ensuring vials for volatiles analysis were free of significant headspace; and
- Examining field and laboratory blanks for possible contamination of samples during collection, transit, and analysis.

Any outliers in comparing analytical procedures to the COC, holding times, or blank contamination that required data qualification were documented in the DVR in Attachment A.

COMPLETENESS

Completeness was evaluated by comparing the total number of samples collected with the total number of samples with valid analytical data. Two types of completeness were calculated for this project: contractual and technical. Contractual completeness is an evaluation of compliant results (those not qualified due to laboratory QC failures). Technical completeness is an evaluation of useable results (not rejected) results. As specified in the project DQOs, the goal for completeness for target analytes in each analytical fraction is 90 percent.

The following equations are used to calculate the two types of completeness:

% Contractual Completeness = (Number of unqualified results / Number of reported results) x 100

% Technical Completeness = (Number of usable results / Number of reported results) x 100

The contractual completeness includes the evaluation of contractual deviations for laboratory QC samples, such as, holding times, LCS/LCSD, and method blanks. The total contractual completeness for all parameters was 96.4%, which met the minimum requirement of 90%.

A total of 117 results were qualified "R" as rejected due to VOA vials with a pH greater than 2 that were not analyzed within the 7-day holding time for unpreserved samples. Therefore, the technical completeness attained for the field samples was 96.4% for all parameters, which meets the minimum requirement of 90%.

SUMMARY

The review of the QC summary results indicates that the results are considered usable for the intended purposes, with the exception of the results qualified as rejected. All project DQOs have been met.

DATA VALIDATION SUMMARY REPORT

for samples collected from

FMC 495 East Brokaw Road

Annual Groundwater Monitoring

February and March 2023

Prepared by Beth Driskill

April 13, 2023

Introduction

This data validation summary report details the findings related to validation of analytical results for groundwater samples collected in support of the annual monitoring at the FMC 495 East Brokaw Road site during February and March 2023. The samples were collected by Parsons and submitted to Eurofins Environment Testing America (EETA) Northern California located in West Sacramento, California for analysis. The samples collected for RSK-175 analysis were shipped to Eurofins Calscience located in Tustin, California. Table 1 presents a summary of the samples collected and analyses performed. Table 2 presents the validated analytical results for the samples associated with this effort. Table 3 includes the analytical methods performed and associated holding times. Table 4 presents the qualified data and reasons for qualification as a result of the data validation performed.

Evaluation Criteria

The Level 2 data package submitted by the laboratory was reviewed and verified following the guidelines outlined in the project specific QAPP and most recent version of the applicable National Functional Guidelines, as detailed below. Information reviewed in the data packages included field sample results; field quality control samples including field duplicates and field blanks; laboratory quality control samples such as method blanks, laboratory control samples, matrix spikes, surrogate spike compounds, and any other method required QC (as applicable). Other information reviewed included case narratives; sample receipt forms, and chain-of-custody (COC) forms. The analyses and findings presented in this report are based on the reviewed information, and whether guidelines in the associated analytical method and QAPP were met.

Data was evaluated as outlined in the analytical methods referenced in Table 3 and applicable guidance from the following documents:

i) FMC California Operations and Maintenance Portfolio Quality Assurance Project Plan, Revision 6, August 2022

ii) "National Functional Guidelines for Organic Superfund Methods Data Review", USEPA 540-R-20-005, November 2020

The National Functional Guidelines notes above will subsequently be referred to as the "NFG" in this report.

1. Sample Holding Time and Preservation

The sample holding time criteria and sample preservation requirements for the analyses performed on the samples are summarized in Table 3. Hold times were calculated using the sample collection date listed on the COC and the preparation and/or analysis dates provided in the laboratory report.

All samples were prepared and analyzed within the required holding time except as follows. The pH of VOC samples cannot be verified until after analysis. The technical holding time for analysis of VOC compounds (pH>2) is 7 days. Sample W-37-030123 was received with a pH of 4 and was analyzed after 7 days; therefore, the detected VOC results in in the sample were qualified “J” as estimated and non-detect results were qualified “R” as rejected. The qualified results due to holding time exceedance are included in Table 4.

All samples were properly preserved (except as noted above for non-preserved VOCs), delivered on ice, and stored by the laboratory at the required temperature (0-6°C).

2. Chain of Custody Evaluation

The COC was reviewed and compared to the sample receipt checklist (SRC). The SRC confirmed that the samples were correctly logged for the requested parameters upon receipt at the laboratory. The COC documents were complete and accurate, the sample identification and collection information were verified, and appropriate signatures documenting relinquishment were provided with the following exception. The MS and MSD samples for W-41-030123 were listed incorrectly on the COC as being preserved but the samples were collected unpreserved. However, data quality is not affected, the MS and MSD were analyzed within the holding time of 7-days for unpreserved samples.

3. Laboratory Method Blanks

Method blanks are prepared by the laboratory from a clean matrix and analyzed with investigative samples to determine the potential existence and magnitude of sample contamination introduced during the preparation and/or analytical procedures.

The laboratory prepared and analyzed method blanks at the required frequency.

All method blank results were non-detect, indicating that laboratory contamination was not a factor, except as follows.

Sec-butylbenzene was detected below the reporting limit in the method blank included in batch 657966. Dichlorodifluoromethane was detected above the reporting limit in the method blank included in batch 659852. The samples associated to these method blanks were non-detect for the detected analytes in the method blank; therefore, data quality was not impacted, and results were not qualified.

4. Laboratory Control Samples

Laboratory control samples (LCS) are prepared and analyzed to evaluate the analytical accuracy of the methods employed, independent of sample matrix effects. The LCS may be prepared and analyzed in duplicate and reported as an LCS/LCS duplicate (LCSD) pair. If analyzed, the relative percent difference (RPD) calculated from the LCS/LCSD concentrations is used to evaluate the analytical precision of the methods employed, independent of sample matrix effects.

The laboratory prepared and analyzed LCS and/or LCSD at the required frequency. The LCS and/or

LCSD contained all analytes of interest.

LCS recoveries and LCS/LCSD RPD were evaluated against the statistical tolerances reported by the laboratory. All LCS recoveries and LCS/LCSD RPDs were within the control limits, demonstrating acceptable analytical accuracy and precision, except as follows.

The LCS and/or LCSD in batch 658376 and 658734 recovered high and outside criteria for one or more of the following analytes: 2,2-dichloropropane and vinyl acetate. These analytes were non-detect in the associated samples; therefore, data quality was not impacted, and results were not qualified.

5. Surrogate Spike Compounds

Surrogate compounds are spiked into every field and laboratory sample prior to analysis for VOCs. Surrogate recoveries are used to evaluate the purge, extraction, and/or analytical efficiency for each individual field and laboratory quality control (QC) sample.

All samples for VOC analysis were spiked with the appropriate surrogate compounds.

Surrogate recoveries were evaluated against the statistical tolerances reported by the laboratory. All surrogate spike recoveries were with acceptance criteria.

6. Matrix Spike/Matrix Spike Duplicate

Matrix spikes are prepared and analyzed to evaluate the analytical accuracy and precision in the specific sample matrix. Matrix spikes are generally performed in duplicate. The percent recoveries for the matrix spikes are used to evaluate accuracy and the RPDs calculated from the MS/MSD concentrations are used to evaluate precision.

The MS/MSD was analyzed on sample W-41-030123 as requested on the COC. The laboratory does not perform MS/MSD analysis for RSK-175; therefore, an analytical duplicate was performed on the same sample as the MS/MSD. The MS/MSD recoveries and RPDs were evaluated against the statistical tolerances reported by the laboratory. All recoveries and RPDs were within the control limits, demonstrating acceptable analytical accuracy and precision.

7. Analytical Duplicates

Analytical duplicates are prepared and analyzed to evaluate the analytical precision of the methods employed in the specific sample matrix. Analytical duplicates are generally employed in lieu of the matrix spike for parameters that cannot be spiked (e.g., pH). Analytical duplicates were evaluated using the laboratory reported criteria and per the “Guidelines” as applicable.

An analytical duplicate was performed on sample W-41-030123 for RSK-175 analysis. The RPD was within control limits for the target analytes, demonstrating acceptable analytical precision.

8. Field Duplicates

Field and analytical precision are evaluated using the analyte results for the field duplicate samples. Field duplicate results were evaluated per the project QAPP. Field duplicates are designated in Table 1 of this report and were submitted blind to the laboratory.

All field duplicate results were within criteria for this data set.

9. Field Blanks

Blank samples are collected in the field and analyzed to evaluate the potential existence and

magnitude of sample contamination introduced during field activities, sample collection procedures, sample storage, and sample transportation. These blanks include trip blanks, equipment blanks, field blanks, and decon blanks. Trip blanks are submitted in every cooler that contains samples for volatiles analysis. Equipment, field, and decon blanks are collected and submitted whenever reusable equipment is employed for sample collection.

A field blank and two trip blanks were associated with the samples in this data set. The samples were collected using disposable equipment; therefore, an equipment blank and decon blank were not collected. All results for the field blank and trip blanks were non-detect except as follows.

Methane was detected below the reporting limit in the field blank. Results for methane in the following samples were detected below the reporting limit and were qualified “U” as non-detect at the reporting limit: W-1-022723, W-10-022723, W-42-030123, and W-44-030223. All other sample results for methane were not qualified because the results were detected above the reporting limit and greater than 5 times the method blank concentration.

The trip blank collected on 3/1/23 had a detection of dichlorodifluoromethane below the reporting limit. A similar detection was found in the storage blank included in the designated storage location that the trip blank and field samples were also stored. The results for dichlorodifluoromethane were non-detect in the associated field samples; therefore, data quality was not impacted, and results were not qualified.

The qualified results due to field blank contamination are included in Table 4.

10. Analyte Reporting

The laboratory reported detected results down to the laboratory method detection limit (MDL) for each analyte. Positive analyte detections less than the reporting limit (RL) but greater than or equal to the MDL were qualified “J” as estimated. Non-detect results were reported at the MDL with a “U” qualifier.

11. Conclusion

Based on the validation performed, all data summarized in Table 2 are usable as qualified except for the VOC results qualified as rejected due to holding time exceedance as discussed above and included in Table 4.

DATA VALIDATION SUMMARY REPORT

for samples collected from

FMC 495 East Brokaw Road

Post Injection Sampling

October 2023

Prepared by Beth Driskill

November 20, 2023

Introduction

This data validation summary report details the findings related to validation of analytical results for groundwater samples collected in support of the post-injection sampling at the FMC 495 East Brokaw Road site during October 2023. The samples were collected by Parsons and submitted to Eurofins Calscience located in Tustin, California for analysis. Table 1 presents a summary of the samples collected and analyses performed. Table 2 presents the validated analytical results for the samples associated with this effort. Table 3 includes the analytical methods performed and associated holding times. Table 4 presents the qualified data and reasons for qualification as a result of the data validation performed.

Evaluation Criteria

The Level 2 data package submitted by the laboratory was reviewed and verified following the guidelines outlined in the project specific QAPP and most recent version of the applicable National Functional Guidelines, as detailed below. Information reviewed in the data packages included field sample results; field quality control samples including field duplicates and field blanks; laboratory quality control samples such as method blanks, laboratory control samples, matrix spikes, surrogate spike compounds, and any other method required QC (as applicable). Other information reviewed included case narratives; sample receipt forms, and chain-of-custody (COC) forms. The analyses and findings presented in this report are based on the reviewed information, and whether guidelines in the associated analytical method and QAPP were met.

Data was evaluated as outlined in the analytical methods referenced in Table 3 and applicable guidance from the following documents:

i) FMC California Operations and Maintenance Portfolio Quality Assurance Project Plan, Revision 6, August 2022

ii) "National Functional Guidelines for Organic Superfund Methods Data Review", USEPA 540-R-20-005, November 2020

The National Functional Guidelines notes above will subsequently be referred to as the "NFG" in this report.

1. Sample Holding Time and Preservation

The sample holding time criteria and sample preservation requirements for the analyses performed on the samples are summarized in Table 3. Hold times were calculated using the sample collection date listed on the COC and the preparation and/or analysis dates provided in the laboratory report.

All samples were prepared and analyzed within the required holding time except as follows. Sample W-39-101823 was logged as preserved by mistake and was analyzed past the 7 day hold time for unpreserved (> pH 2) samples; therefore, the detected VOC results in in the sample were qualified "J" as estimated and non-detect results were qualified "R" as rejected. The qualified results due to holding time exceedance are included in Table 4.

All samples were properly preserved (except as noted on the COC for non-preserved VOCs), delivered on ice, and stored by the laboratory at the required temperature (0-6°C).

2. Chain of Custody Evaluation

The COC was reviewed and compared to the sample receipt checklist (SRC). The SRC confirmed that the samples were correctly logged for the requested parameters upon receipt at the laboratory. The COC documents were complete and accurate, the sample identification and collection information were verified, and appropriate signatures documenting relinquishment were provided with the following exception. The number of containers submitted for each sample was documented incorrectly on the COC; however, this documentation discrepancy does not impact data quality.

3. Laboratory Method Blanks

Method blanks are prepared by the laboratory from a clean matrix and analyzed with investigative samples to determine the potential existence and magnitude of sample contamination introduced during the preparation and/or analytical procedures.

The laboratory prepared and analyzed method blanks at the required frequency.

All method blank results were non-detect, indicating that laboratory contamination was not a factor, except as follows.

Methylene chloride was detected below the reporting limit in the method blank included in batch 378733. The results for methylene chloride in sample W-40-101823 was qualified "U" as non-detect at the reporting limit. All other samples associated with this method blank were non-detect for methylene chloride; therefore, data quality was not impacted, and results were not qualified.

The results qualified due to method blank contamination are included in Table 4.

4. Laboratory Control Samples

Laboratory control samples (LCS) are prepared and analyzed to evaluate the analytical accuracy of the methods employed, independent of sample matrix effects. The LCS may be prepared and analyzed in duplicate and reported as an LCS/LCS duplicate (LCSD) pair. If analyzed, the relative percent difference (RPD) calculated from the LCS/LCSD concentrations is used to evaluate the analytical precision of the methods employed, independent of sample matrix effects.

The laboratory prepared and analyzed LCS and/or LCSD at the required frequency. The LCS and/or LCSD contained all analytes of interest.

LCS recoveries and LCS/LCSD RPD were evaluated against the statistical tolerances reported by the laboratory. All LCS recoveries and LCS/LCSD RPDs were within the control limits, demonstrating acceptable analytical accuracy and precision.

5. Surrogate Spike Compounds

Surrogate compounds are spiked into every field and laboratory sample prior to analysis for VOCs. Surrogate recoveries are used to evaluate the purge, extraction, and/or analytical efficiency for each individual field and laboratory quality control (QC) sample.

All samples for VOC analysis were spiked with the appropriate surrogate compounds.

Surrogate recoveries were evaluated against the statistical tolerances reported by the laboratory. All surrogate spike recoveries were with acceptance criteria.

6. Matrix Spike/Matrix Spike Duplicate

Matrix spikes are prepared and analyzed to evaluate the analytical accuracy and precision in the specific sample matrix. Matrix spikes are generally performed in duplicate. The percent recoveries for the matrix spikes are used to evaluate accuracy and the RPDs calculated from the MS/MSD concentrations are used to evaluate precision.

The MS/MSD was analyzed on sample W-41-101923 as requested on the COC. The laboratory does not perform MS/MSD analysis for RSK-175; therefore, an analytical duplicate was performed on the same sample as the MS/MSD. The MS/MSD recoveries and RPDs were evaluated against the statistical tolerances reported by the laboratory. All recoveries and RPDs were within the control limits, demonstrating acceptable analytical accuracy and precision. MS/MSD recoveries are not evaluated for analytes where the spike amount is greater than 4 times the spike amount.

7. Analytical Duplicates

Analytical duplicates are prepared and analyzed to evaluate the analytical precision of the methods employed in the specific sample matrix. Analytical duplicates are generally employed in lieu of the matrix spike for parameters that cannot be spiked (e.g., pH). Analytical duplicates were evaluated using the laboratory reported criteria and per the “Guidelines” as applicable.

An analytical duplicate was performed on sample W-41-101923 for RSK-175 analysis. The RPD was within control limits for the target analytes, demonstrating acceptable analytical precision.

8. Field Duplicates

Field and analytical precision are evaluated using the analyte results for the field duplicate samples. Field duplicate results were evaluated per the project QAPP. Field duplicates are designated in Table 1 of this report and were submitted blind to the laboratory.

All field duplicate results were within criteria for this data set.

9. Field Blanks

Blank samples are collected in the field and analyzed to evaluate the potential existence and magnitude of sample contamination introduced during field activities, sample collection procedures, sample storage, and sample transportation. These blanks include trip blanks, equipment blanks, field blanks, and decon blanks. Trip blanks are submitted in every cooler that contains samples for volatiles

analysis. Equipment, field, and decon blanks are collected and submitted whenever reusable equipment is employed for sample collection.

A field blank and trip blank were associated with the samples in this data set. The samples were collected using a peristaltic pump and disposable tubing; therefore, an equipment blank and decon blank were not applicable for collection. All results for the field blank and trip blanks were non-detect except as follows.

Methane and chloroform were detected below the reporting limit in the field blank. Results for methane in the following samples were detected below the reporting limit and were qualified “U” as non-detect at the reporting limit: W-1-101823 and W-44-101923. All other sample results for methane were not qualified because the results were detected above the reporting limit and greater than 5 times the method blank concentration. Chloroform was non-detect in all the field samples; therefore, data quality was not impacted, and results were not qualified.

The results qualified due to field blank contamination are included in Table 4.

10. Analyte Reporting

The laboratory reported detected results down to the laboratory method detection limit (MDL) for each analyte. Positive analyte detections less than the reporting limit (RL) but greater than or equal to the MDL were qualified “J” as estimated. Non-detect results were reported at the MDL with a “U” qualifier.

11. Conclusion

Based on the validation performed, all data summarized in Table 2 are usable as qualified with exception of the VOC results qualified as rejected due to holding time exceedance.

Qualified Sample Results
Post Injection Sampling
FMC 495 East Brokaw Road
San Jose, California
October 2023

Parameter	Sample ID	Analyte	Qualified Sample Results	Units	Qualifier Reason Code
Volatile Organic Compounds	W-39-101823	All detected VOC analytes	Detected result J	ug/L	SC1
Volatile Organic Compounds	W-39-101823	All non-detected VOC analytes	Non-detect result R	ug/L	SC1
Volatile Organic Compounds	W-40-101823	Methylene Chloride	10 U	ug/L	BLT
Dissolved Gases	W-1-101823	Methane	1.0 U	ug/L	BLS
Dissolved Gases	W-44-101923	Methane	1.0 U	ug/L	BLS

Notes:
U - Not detected above the level of the adjusted quantitation limit.
J - Estimated concentration.
R - Rejected; result is not useable.
BLS - Concentration in field blank or decon blank less than reporting limit.
BLT - Concentration in method blank less than reporting limit.
SC1 - Analysis holding time exceeded.

User Questionnaire

Subject Property:	Brokaw 326-346 Charcot Avenue; 309-391 East Brokaw Road; and 2012-2156 Zanker Road San Jose, California 95131
	Partner Project No. 25-511822.2
User Representative:	Brett Richer
Title:	VP
Date:	09/08/25
Reason for Phase I ESA:	Due Diligence

To qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the Phase I Environmental Site Assessment ("Phase I ESA") User must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" has not been completed.

This document is designed to comply with Section 6 and Appendix X3, User Questionnaire, of ASTM E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, and the USEPA AAI regulations (40 CFR §312).

1) Environmental cleanup liens that have been filed or recorded against the Subject Property (Part 312.25 of Title 40 of the Code of Federal Regulations [40 CFR 312.25]).

   Are you aware of any environmental cleanup liens against the Subject Property that have been filed or recorded under federal, tribal, state, or local law?

   ☐ Yes ☑ No

   If Yes, explain and/or provide information:

2) Activity and land use limitations that are in place at the Subject Property or that have been filed or recorded in a registry (40 CFR 312.26).

Are you aware of any activity and land use limitation (such as engineering controls, land use restrictions, or institutional controls) that are in place at the Subject Property and/or have been filed or recorded in a registry under federal, tribal, state, or local law?

☐ Yes ☑ No

If Yes, explain and/or provide information:

3) Specialized knowledge or experience of the person seeking to qualify for the LLPs (40 CFR 312.28).

As the User of the Phase I ESA Report, do you have any specialized knowledge or experience related to the Subject Property or nearby properties? For example, are you involved in the same line of business as the current or former occupant(s) of the Subject Property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

☐ Yes ☑ No

If Yes, explain and/or provide information:

4) Relationship of the purchase price to the fair market value of the Subject Property if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this property reasonably reflect the fair market value of the Subject Property? If you conclude that there is a difference between the purchase price and the fair market value, have you considered whether the lower purchase price is because contamination is known or believed to be present at the Subject Property?

☑ Yes ☐ No

If No, explain and/or provide information:

5) Commonly known or reasonably ascertainable information about the Subject Property (40 CFR 312.30).

Are you aware of commonly known or reasonably ascertainable information about the Subject Property that would help the Environmental Professional to identify conditions indicative of releases or threatened releases? For example:

a) Do you know the past use of the Subject Property?
b) Do you know specific chemicals that are present or once were present at the Subject Property?
c) Do you know of spills or other chemical releases that have taken place at the Subject Property?
d) Do you know of any environmental cleanups that have taken place at the Subject Property?

☐ Yes ☑ No to all

If Yes, explain and/or provide information:

6) The degree of obviousness of the presence or likely presence of contamination at the Subject Property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

As the user of the Phase I ESA Report, based on your knowledge and experience related to the Subject Property, is there any obvious indicator(s) that point to the presence or likely presence of contamination at the Subject Property?

☐ Yes ☑ No

If Yes, explain and/or provide information:

7) Previous Environmental Reports.

Are previous environmental reports available for the Subject Property, provided by the User for review?

☑ Yes ☐ No

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Regulated Programs

EI ID: 10349335 **EI Description:** Chemical Storage Facilities

EI ID: 10349335 **EI Description:** Hazardous Waste Generator

Violations

Violation Date: 06/13/2024 **Violation Source:** CERS
Violation Program: HMRRP **Violation Division:** Santa Clara County Environmental Health
Citation: HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Notes:

Returned to compliance on 10/16/2024. The last submitted CERS inventory was missing the following items: - 15 x 55 gallon drums of waste ink containers. (~4,000 lbs) - 4 x 55 gallon drums of Procoat AQ Make a complete and accurate CERS submittal within 30 days.

Violation Description:

Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violations

Violation Date: 06/13/2024 **Violation Source:** CERS
Violation Program: HMRRP **Violation Division:** Santa Clara County Environmental Health
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Notes:

Returned to compliance on 10/16/2024. Facility has not made a full submittal to CERS since 7/22/2021. CERS is over due by 692 days as of the date of this report. Additionally this facility has not submitted an acceptable Facility Information section since 2020. Facility must check yes to all applicable elements in the facility information section. Make a complete and accurate CERS submittal within 30 days.

Violation Description:

Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.

Violations

Violation Date: 06/13/2024 **Violation Source:** CERS
Violation Program: HW **Violation Division:** Santa Clara County Environmental Health
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Notes:

Returned to compliance on 10/16/2024. Facility stated that the 15 drums of waste ink containers had been accumulating since 2020. As a small quantity generator all non point of generation satellite waste must be disposed of within 180 days. Dispose of these drums within 30 days.

Violation Description:

Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met:

(1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms.

(2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f).

(3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violations

Violation Program: HMRRP ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.95 25505.1 - California Health and Safety Code, Chapter 6.95, Section(s) 25505.1
Violation Notes:

Returned to compliance on 10/16/2024. Facility has not notified the property owner of HMBP activities on site. A template notification letter will be provided to the facility via email along with this report.

Violation Description:

Failure to notify property owner in writing that the business is subject to the business plan program and has complied with its provisions.

Violations

Violation Date: 06/13/2024 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Notes:

Returned to compliance on 10/16/2024. Facility conducts training upon employee hire but does not have an annual training. Training is required to be conducted and logged for each employee upon hire and annually thereafter. Conduct and log a training within 30 days.

Violation Description:

Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Violations

Violation Date: 06/13/2024 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 22 CCR 12 66262.34(e) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(e)
Violation Notes:

Returned to compliance on 10/16/2024. The 55 gallon drum of ink may be treated as point of generation satellite waste, however, the facility stated that it has not been disposed of since 2020. Point of generation waste may be accumulated for up to 365 days. Dispose of this drum within 30 days.

Violation Description:

Failure to meet the following conditions of satellite accumulation regulations:

• Accumulate up to 55 gallons of hazardous waste or one quart of acute hazardous waste at or near the initial point of accumulation which was under the control of the operator.

• Total time hazardous waste can be accumulated onsite in any generator accumulation area is one year, i.e., the combined accmulation time at a satellite accumulation point and at a 90/180/270 accumulation area (depending on size of generator and distance transported), whichever comes first.

• The generator complies with section 66265.171, 66265.172, and 66265.173(a).

• The container must be clearly marked with the initial date that hazardous waste is first placed in the container and labelled with the words "Hazardous Waste" including specified information

• Container must be labelled with the date the satellite accumulation limit is reached and moved within three days after reaching the 55 gallon (or one quart) limit to a "90 day" accumulation area

• 55 gallons (or one quart of acute hazardous waste) of waste per process may be accumulated

Violations

Violation Date: 06/13/2024
Violation Source: CERS
Violation Program: HW
Violation Division: Santa Clara County Environmental Health
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Notes:

Returned to compliance on 10/16/2024. The following hazardous waste containers were not sufficiently marked: - The 15 drums of ink containers were mostly devoid of any labeling. Two drums were found with illegible labels missing all information. - The 55 gallon drum of waste ink did not have an accumulation start date. Ensure all hazardous waste containers are properly marked with all required information.

Violation Description:

Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Evaluations

Eval Date: 06/13/2024
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS
Eval Notes:

On site on 6/12/2024 to perform a routine hazardous waste generator inspection. Inspection is concluded with issuance of this report. Facility is a medium sized print shop. Hazardous waste generated on site primarily consists of waste ink and ink containers. The following hazardous wastes were observed on site during inspection: - 15 x 55 gallon drums of waste ink containers - 1 x 55 gallon drum of waste ink The following other elements were checked for compliance as part of this inspection. - No manifests were available for review as the last waste pickup was 2020 or earlier. - EPA ID# CAL000223057 is active. - Emergency equipment maintained. - Emergency contacts posted. - Shop rags laundered. - Hazardous waste training adequate. Action Items/Notes to Facility: 1) Violations are marked in this report. 2) In the 15 drums containing waste ink containers it was found that many containers were empty and do not need to be disposed of as [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 06/13/2024
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Santa Clara County Environmental Health

Citation: HSC 6.11 25404.1 - California Health and Safety Code, Chapter 6.11, Section(s) 25404.1
Violation Notes:

FACILITY GENERATES AND STORES A HAZARDOUS WASTE BUT FAILED TO OBTAIN A HAZARDOUS WASTE GENERATOR PERMIT FROM THE HAZARDOUS MATERIALS COMPLIANCE DIVISION.

Violation Description:

Failure to obtain and/or maintain an active hazardous waste generator permit.

Violations

Violation Date: 03/03/2016 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 40 CFR 1 265.174 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.174
Violation Notes:

Returned to compliance on 05/02/2016. BASED ON THE TYPE AND NUMBER OF INSPECTION IT APPEARS THAT WEEKLY HAZARDOUS WASTE INSPECTIONS ARE NOT BEING CONDUCTED.

Violation Description:

Failure to inspect hazardous waste storage areas at least weekly.

Violations

Violation Date: 03/03/2016 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Notes:

Returned to compliance on 05/02/2016. THREE YEARS WORTH OF CONSOLIDATED MANIFESTS WERE NOT AVAILABLE FOR REVIEW.

Violation Description:

Haz Waste Generator Program - Administration/Documentation - General

Violations

Violation Date: 03/03/2016 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Notes:

Returned to compliance on 05/02/2016. THE DUMPSTER AREA IS STAINED FROM USED OIL RELEASES.

Violation Description:

Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to the air, soil, or surface water which could threaten human health or the environment..

Violations

Violation Date: 03/03/2016 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 40 CFR 1 262.34(d)(5)(ii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(ii)
Violation Notes:

Returned to compliance on 05/02/2016. FACILITY FAILED TO POST EMERGENCY PROCEDURES POSTING NEXT TO A TELEPHONE. A TEMPLATE WAS LEFT ON SITE.

Violation Description:

Failure to post, next to the telephone, Emergency Information (SQG) containing the location of emergency equipment, contact names and numbers.

Violations

Violation Date: 03/03/2016 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Notes:

Returned to compliance on 05/02/2016. THE FACILITY TO KEEP EPA ID NUMBER CAL000330184 ACTIVE. -EPA FORM 8700 WAS PROVIDED TO THE FACILITY.

Violation Description:

Failure to obtain and/or maintain an Active EPA ID.

Violations

Violation Date: 03/03/2016
Violation Source: CERS
Violation Program: HMRRP
Violation Division: Santa Clara County Environmental Health
Citation: HSC 6.95 25508(d) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(d)
Violation Notes:

Returned to compliance on 05/02/2016. THE FACILITY STORES THE FOLLOWING CHEMICALS IN QUANTITIES SUBJECT TO THE HAZARDOUS MATERIALS BUSINESS PLAN BUT FAILED DISCLOSE THEM ON CERS: -6 X 55 GALLON OF USED OIL -4 X 55 GALLON OF OILY SLUDGE -ACETYLENE GAS, LARGEST CONTAINER 114 FT3, TOTAL AGGREGATE 500 FT3 -OXYGEN GAS, LARGEST CONTAINER 127 FT3, TOTAL AGGREGATE 591 FT3

Violation Description:

Failure to complete and/or electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.

Evaluations

Description of Events: DRIVER MADE DELIVERY AT FIRST STOP IN SAN JOSE AT 1500. EN ROUTE TO DELIVERING THIS MATERIAL HE WAS FLAGGED OVER BY ANOTHER MOTORIST AND NOTIFIED LIQUID WAS LEAKING OUT THE BACK DOOR OF THE TRAILER. OVERNITE DRIVER PULLED TRAILER INTO OPEN DIRT FIELD AND NOTIFIED DISPATCH. HE THEN CALLED FIRE DEPT. UPON OPENING THE BACK OF THE TRAILER, THE FIRE DEPT SAW 2 55 GAL DRUMS HAD FALLEN ON THEIR SIDES. THE CAP HAD POPPED OFF ONE OF THEM. 8-DRUMS HAD BEEN LOADED ON TOP OF WOODEN PALLETS IN THE TRAILER CAUSING DRUMS TO MOVE IN TRANSIT. THIS IS AGAINST COMPANY POLICY TO LOAD H/M IN THIS MANNER. CORRECTIVE ACTIONS ARE BEING TAKEN WITH RESPONSIBLE PARTIES.

Recommend Actions Taken:

Regulated Programs

EI ID: 10352578
EI Description: Chemical Storage Facilities

Violations

Violation Date: 07/29/2021
Violation Source: CERS
Violation Program: HMRRP
Violation Division: Santa Clara County Environmental Health
Citation: HSC 6.95 Multiple - California Health and Safety Code, Chapter 6.95, Section(s) Multiple
Violation Notes:

Facility has outstanding balance of $452.00 and is therefore operating without a valid permit. Pay outstanding invoices within 30 days.

Violation Description:

Business Plan Program - Administration/Documentation - General

Violations

Violation Date: 06/02/2015
Violation Source: CERS
Violation Program: HMRRP
Violation Division: Santa Clara County Environmental Health
Citation: HSC 6.95 25508.2 - California Health and Safety Code, Chapter 6.95, Section(s) 25508.2
Violation Notes:

The last complete hazardous materials business plan was completed 5/2/12. Annual certification is due now and must be submitted electronically. Please go to the california environmental reporting system (CERS) at http://cers.calepa.ca.gov and create a user account, request access, then submit all facility, inventory and plans information. Your CERS ID is seeded now as #10352578. For more assistance with the electronic submittal process, contact Jeffrey M. Higbee at 408-918-4785 or email at jeffrey.higbee@deh.sccgov.org

Violation Description:

Failure to annually review and electronically certify that the business plan is complete, accurate, and up-to-date.

Violations

Violation Date: 03/08/2018 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Notes:

Per facility's 4/27/17 CERS submittal, only 104 gallons of propane was reported and is missing the 701 cubic feet of acetylene observed during this inspection.

Violation Description:

Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violations

Violation Date: 03/08/2018 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.95 25505.1 - California Health and Safety Code, Chapter 6.95, Section(s) 25505.1
Violation Notes:

Facility did not notify the property owner that they are subject to HMBP requirements.

Violation Description:

Failure to provide a copy of the business plan to the owner or the owner's agent within five working days after receiving a request for a copy from the owner or the owner's agent.

Violations

Violation Date: 03/08/2018 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Notes:

Per facility's 4/27/17 CERS submittal, the Emergency Response Plan and Training PLans are missing.

Violation Description:

Failure to establish and electronically submit an adequate emergency response plan and procedures for a release or threatened release of a hazardous material.

Violations

Violation Date: 03/08/2018 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Notes:

The site map is missing the following elements: - north arrow - emergency evacuation staging areas

Violation Description:

Failure to complete and electronically submit a site map with all required content.

Enforcements

Enf Action Date: 06/02/2015 ***Enf Action Program:*** HMRRP

Enf Action Notes:

Evaluations

Eval Date: 08/03/2021
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Santa Clara County Environmental Health
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

Site visit with Robin Ward (Hazardous Materials Specialist) to conduct Hazardous Materials Business Plan (HMBP) inspection. Completed walkthrough and paperwork review with Frank Castillo, Sales. Business operation consists of sales of plumbing supplies to businesses and the general public. Most recent HMBP submittal was on 12/15/2020 (CERS ID 10352578). Confirmed via email that annual training is being documented and that the property owner has been notified of facility's compliance with HMBP requirements. Based on observed chemical inventory, the facility is appropriately permitted. The following reportable chemicals were observed: 88 gallons (3000 cubic feet) of propane; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 06/02/2015
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Santa Clara County Environmental Health
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

Hazardous Materials above reporting thresholds onsite today: 1. Approx. 630 cubic feet of Acetylene Gas 2. 13 - 8 gallon propane cylinders for forklift operations; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 03/08/2018
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Santa Clara County Environmental Health
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

On site to conduct a routine hazardous materials business plan inspection CERS ID: 10352578 Facility's last HMBP submittal was 4/27/17 via CERS Observed the following reportable chemicals on site: 91 gallons of propane 701 cubic feet of acetylene Documented annual employee training was reviewed on site; Note: data in [EVAL Notes] field for some records is truncated from the source.

Violations

Violation Date: 06/27/2024 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Notes:

Returned to compliance on 03/26/2025. This facility is subject to HMBP reporting for the following hazardous materials/wastes; - SOLDER PASTE WIPES / LEAD FREE = 1 x 30gal = 30gal. - RAGS CONTAMINATED WITH LEAD = 1 x 30gal = 30gal. - WASTE WATER WITH LEAD = 1 x 55gal = 55gal - SOLDER DROSS/ LEAD FREE = 1 x 15gal = 15gal. - SOLDER DROSS/ LEADED = 1 x 5gal = 5gal. - WASTE FLUX = 1 x 30gal = 30gal.

Violation Description:

Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.

Violations

Violation Date: 06/26/2024 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.11 25404(e)(4) - California Health and Safety Code, Chapter 6.11, Section(s) 25404(e)(4)

Violation Notes:

Returned to compliance on 03/26/2025. On-site to conduct a permit investigation on 6/26/24. This business generates hazardous waste from the electronic assembly services they provide. CERS ID - 10349134. The following hazardous wastes were observed. - SOLDER PASTE WIPES / LEAD FREE = 1 x 30gal = 30gal. - RAGS CONTAMINATED WITH LEAD = 1 x 30gal = 30gal. - WASTE WATER WITH LEAD = 1 x 55gal = 55gal - SOLDER DROSS/ LEAD FREE = 1 x 15gal = 15gal. - SOLDER DROSS/ LEADED = 1 x 5gal = 5gal. - WASTE FLUX = 1 x 30gal = 30gal. Notes: 1.) This facility has an active Federal EPA ID# CAD983597576 for the disposal of hazardous waste. 2.) The facility contact is Mazin Kafeety who is the facility manager. 3.) All future invoices and permits will be mailed to the facility address at; 2085 ZANKER RD, SAN JOSE, CA 95131. 4.) Permit Investigation was conducted due to new ownership at facility, the current active permit has the previous tenants information, an updated [Truncated]

Violation Description:

Failure to report, and report accurately, program data (such as hazardous waste generation activities) electronically.

Violation Notes:

Returned to compliance on 01/28/2025. During inspection on 12/16/2024 an ammonia leak was detected near the aqueous ammonia process using the HMCD owned RKI GX-3R Pro 4 gas and ammonia portable detector. Initially ammonia was detected by smell during the site walk and traced back towards the aqueous tanks as the inspection was conducted. In the immediate vicinity of pumps 2101 and 2102 the meter went into alarm at the 28ppm set point for ammonia with an observed maximum of 29ppm on the meter display before leaving the area to avoid exposure. The meter was bump tested prior to the inspection to ensure accuracy. It is unclear how long this leak may have been occurring as generally the facility staff was unable to smell the ammonia. There was a documented anonymous complaint of ammonia odor in the area in June of 2024 indicating this release may be ongoing or intermittent. After the walk through, the facility was instructed to report the release to CalOES, which at the time of issuance of this report, the [Truncated]

Violation Description:

Failure to report a release or threatened release of a hazardous material to the unified program agency and to OES.

Violations

Violation Date: 12/19/2024 ***Violation Source:*** CERS
Violation Program: CalARP ***Violation Division:*** Santa Clara County Environmental Health
Citation: 19 CCR 2 5100.2(a) - California Code of Regulations, Title 19, Chapter 2, Section(s) 5100.2(a)
Violation Notes:

Returned to compliance on 04/10/2025. The PHA's for regulated processes were not conducted with sufficient detail to detect errors in the P&IDs. It was observed that in 2021 and 2023 P&IDs that four ammonia detectors are shown for the aqueous tanks, three are shown near the aqueous reactor and piping, two are shown near the scrubber tank, and four more are shown near the anhydrous process, for a total of 13 ammonia detectors in P&IDs. However it was observed that only 5 ammonia detectors exist on site. These most recent PHAs concluded that there were no findings to address at this facility for either process.

Violation Description:

Failure to conduct an initial Process Hazard Analysis on the covered processes no later than the date of submittal of the RMP.

Violations

Violation Date: 08/06/2015 ***Violation Source:*** CERS

Violation Program: CalARP ***Violation Division:*** Santa Clara County Environmental Health
Citation: 19 CCR 2 5100.7(a) - California Code of Regulations, Title 19, Chapter 2, Section(s) 5100.7(a)
Violation Notes:

Facility maintenance records show that a valve called the Ammonia Globe Valve was replaced in May 2024. Records noted that the valve was replaced with a new branded product since the old valve manufacturer no longer made parts. There is no paperwork indicating that a pre-start up safety review was conducted on the new valve ensuring it was fit for the intended service. The new valve would require a PSSR as a new manufacturer would have new maintenance procedures that would impact process safety information.

Violation Description:

Failure to perform a pre-startup safety review for new stationary sources and for modified stationary sources when the modification is significant enough to require a change in the process safety information.

Violations

Violation Date: 08/18/2021 ***Violation Source:*** CERS
Violation Program: CalARP ***Violation Division:*** Santa Clara County Environmental Health
Citation: 19 CCR 4.5 2760.5(d) - California Code of Regulations, Title 19, Chapter 4.5, Section(s) 2760.5(d)
Violation Notes:

Returned to compliance on 03/28/2023. 1.) Aqueous ammonia tanks are subjected to periodic external visual inspection. Facility failed to document how this maintenance schedule complies with recognized and generally accepted good engineering practices. 2.) Daily and monthly inspection checklists include inspections of aqueous ammonia piping. Observed corrosion of ammonia vapor line piping (running between the incoming RO water filtration system and Calcium Chloride tank). Corrosion of this piping was not noted on daily inspections. Conduct sufficiently detailed daily inspections to comply with Mechanical Integrity program requirements. 3.) Daily inspection checklists list under item 51 that portable handheld ammonia sensors are used onsite, however facility contacts were not aware that these sensors existed and could not provide details on calibration and maintenance schedules for these sensors. 4.) Last replacement maintenance record for hydrostat replacement was requested but no work order could be [Truncated]

Violation Description:

Failure to ensure the following:
1. Inspections and tests are performed on process equipment;
2. Inspection and testing procedures follow recognized and generally accepted good engineering practices;
3. The frequency of inspections and tests of process equipment is consistent with applicable manufacturers' recommendations and good engineering practices, and more frequently if determined to be necessary by prior operating experience;
4. Each inspection or test that has been performed on process equipment is documented and includes the date of inspection or test, name of the person who performed the inspection or test, serial number or other identifier of the equipment inspected or tested, description of the inspection or test performed, and the results of the inspection or test.

Citation: 19 CCR 2 5100.5(d) - California Code of Regulations, Title 19, Chapter 2, Section(s) 5100.5(d)
Violation Notes:

The following testing or inspection procedures are inadequate to maintain compliance: 1) The mid 1930's aqueous rail car tanks are insulated by a ~6 inch layer of cork and an additional metal shell surrounding the cork. As part of the modification from rail service to stationary service a small window was cut into the insulation on the front of the tanks so that piping penetrations could be cut and piping welding into place. Approximately ~10% of the primary tank surface is accessible for ultrasonic thickness testing. A letter from professional engineer, Peter Thomas, of consulting firm, Resource Compliance, composed a report declaring the tanks fit for continued service after obtaining UT measurements from less than ~10% of the tank shell. This manner of testing does not conform to RAGAGEP or any known industry standard. Implement a testing and inspection schedule that meets industry standards or RAGAGEP for this tank type. Additionally, to date, there are no pressure [Truncated]

Violation Description:

Failure to ensure the following:
1. Inspections and tests are performed on process equipment;
2. Inspection and testing procedures follow recognized and generally accepted good engineering practices;
3. The frequency of inspections and tests of process equipment is consistent with applicable manufacturers' recommendations and good engineering practices, and more frequently if determined to be necessary by prior operating experience;
4. Each inspection or test that has been performed on process equipment is documented and includes the date of inspection or test, name of the person who performed the inspection or test, serial number or other identifier of the equipment inspected or tested, description of the inspection or test performed, and the results of the inspection or test.

Eval Notes:

On site to perform a limited inspection as a follow up to a routine inspection conducted on 12/16/2024. During the initial routine inspection ~29ppm of ammonia was detected directly adjacent to aqueous ammonia pumps 2101 and 2102 using the HMCD owned RKI GX-3R Pro 4 gas meter. This follow up inspection was initiated to determine if the release is still ongoing. The same RKI GX-3R Pro meter was bump tested and calibrated in office prior to bringing it out to the Hill brothers facility to ensure accurate sampling. During a walk through, with specific focus on aqueous ammonia pumps 2101 and 2102, generally 0 ppm of ammonia was detected. However, there was a brief registering of 4.5ppm at the point of the fill hose connection to the process piping and again at the aqueous ammonia sampling point. At that time, an aqueous ammonia sample was pulled from the lines during a tanker filling process and may have caused these readings. It should be noted that pumps 2102 and [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Notes:	

On site on 12/16/2024 to perform a routine California Accidental Release Prevention inspection. Also present for inspection is fellow inspector Rob Ward. Facility staff present for inspection include Mike Amodeo, Yasir Khan, and Tyler Cheney. Inspection is concluded with issuance of this report Facility is a CalARP program 3 facility with two regulated processes which consist of one anhydrous ammonia process and one aqueous ammonia process. The anhydrous ammonia process features a 14,500 gallon tank, or ~74,675 pounds of refrigeration grade anhydrous ammonia. The aqueous ammonia process features three 11,000 gallon tanks of 30% commercial aqueous ammonia. Facility RMP was last submitted in December of 2021. The 14,500 gallon anhydrous ammonia tank is generally used only for storage and transfers to smaller containers for retail and does not feed any other chemical process. The tank is located in a secondary containment berm and features double wall piping outside [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

PE: 2262
Description: CONDITIONALLY AUTHORIZED (CA)
Program Identifier: DEH PERMIT-ONSITE HAZ WASTE TREATMENT/TIERED PERMIT PROGRAM

Details

Record ID: PR0313036
PE: 2205
Description: GENERATES 100 KG YR TO <5 TONS/YR
Program Identifier: DEH PERMIT-HAZ WASTE GENERATOR PROGRAM

Details

Record ID: PR0396474
PE: BP06
Description: HMBP FACILITY, 22+ CHEMICALS
Program Identifier: DEH PERMIT-HAZ MAT BUSINESS PLAN PROGRAM

EI ID: 10348390
EI Description: Hazardous Waste Generator

EI ID: 10348390
EI Description: Chemical Storage Facilities

Violations

Violation Date: 03/18/2016 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Notes:

Returned to compliance on 04/15/2016. 1 x 55 gallon drum of resist flammable waste was not marked with required details in back of shop. 1 x 5 gallon plastic drum of waste oils was not marked with details.

Violation Description:

Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violation Date: 03/18/2016 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Notes:

Returned to compliance on 04/15/2016. The HMBP iin CERS is missing complete emergency response plans and training information. Go to http://cers.calepa.ca.gov and update your HMBP.

Violation Description:

Failure to establish and electronically submit an adequate emergency response plan and procedures for a release or threatened release of a hazardous material.

Violations

Violation Date: 07/02/2008 ***Violation Source:*** SMARTS
Violation Program: INDSTW ***Violation Division:*** Water Boards
Citation: 2014-0057-DWQ - Industrial General Permit
Violation Notes:

Failure to submit the 2007-2008 Annual Report by 7/1/08 due date.

Violation Description:

SW - Late Report

Violations

Violation Date: 03/18/2016 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 22 CCR 16 66266.130 - California Code of Regulations, Title 22, Chapter 16, Section(s) 66266.130
Violation Notes:

Returned to compliance on 04/15/2016. 1 x 55 gallon drum of used oil filters was not marked with details.

Violation Description:

Failure to properly handle, manage, label, and recycle used oil and fuel filters.

Violations

Violation Date: 03/18/2016 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 40 CFR 1 262.34(d)(5)(iii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(iii)

Violation Notes:

Returned to compliance on 04/15/2016. Personnel are not thoroughly familiar with hazardous waste management operations. Free training is available by the County of Santa Clara, contact Jeffrey Higbee for information regarding this free training.

Violation Description:

Failure to ensure employees are familiar with the handling and compliance of hazardous waste regulations and emergency response.

Violations

Violation Date: 03/18/2016 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 22 CCR 12 66262.40(c) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(c)
Violation Notes:

Returned to compliance on 04/15/2016. Waste wipes and rags utilized in process areas for cleaning purposes that are contaminated with acetone and alcohol are placed in the regular trash. Please make the proper determination whether these wastes exhibit hazardous characteristics prior to disposal and manage properly.

Violation Description:

Failure to determine if the waste generated is a hazardous waste and to maintain analysis results for three years.

Violations

Violation Date: 03/18/2016 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Notes:

Returned to compliance on 04/15/2016. The hazardous material and waste inventory is not accurate, please go to CERS and update your inventory detail information at http://cers.calepa.ca.gov

Violation Description:

Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violations

Violation Date: 07/15/2021 ***Violation Source:*** SMARTS
Violation Program: INDSTW ***Violation Division:*** Water Boards
Citation: 2014-0057-DWQ - Industrial General Permit
Violation Notes:

Failure to submit required report 2021 Level 1 ERA Report

Violation Description:

SW - Late Report

Violations

Violation Date: 03/18/2016 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Notes:

Returned to compliance on 04/15/2016. The secondary area below used oil, resist and oil filter drums is full of free standing an unknown liquid. Liquid appears to be rain water. Maintain secondary areas dry to prevent releases to the environment.

Violation Description:

Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to the air, soil, or surface water which could threaten human health or the environment..

Enforcements

Enf Action Date: 08/22/2008

Evaluations

Eval Date: 03/18/2016
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Santa Clara County Environmental Health
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

HMBP threshold chemicals onsite today: 1. Used oil - 55 gal. 2. Resist Waste - 55 gal. 3. Sulfuric Acid Waste - 55 gal. 4. HF waste - 55 gal. 5. oxygen liquid - 55 gal.+ 6. nitrogen liquid - 55 gal. + 7. NaOH - 22 gal. 8. hydrogen gas - 200 cu.ft.+ Facility is currently BP03, permit will be modified; note: last inspection was 2010 and tiered permitting unit was closed in 2012.; Note: data in [EVAL Notes] field for some records is truncated from the source.

A2022 Senate District: 10
Site History:

The Site was agricultural land before 1960. An aluminum extrusion plant operated at the Site from 1960 to 1966, under several owners. FMC used the Site from 1966 through 1988 to manufacture commercial logging equipment and military ordnance. FMC purchased the Site in 1983, then sold the Site in 1987. The Site is currently owned by 495 East Brokaw Road, LLC, and leased by various tenants.FMC began environmental investigations at the Site in 1986 and identified high boilingpoint hydrocarbons and volatile organic compounds (VOCs) in the Site soil and groundwater. Approximately 1,200 cubic yards of impacted soils were excavated from specific sumps and pits at the Site in 1987 and 1988. In 1988, FMC conducted further investigations of soil and groundwater that confirmed that VOC impacts were still present in shallow soil and groundwater. FMC reported these results to the State of California Regional Water Quality Control Board, San Francisco Bay Region (RWQCB) in the Comprehensive Site Assessment Report - Soil and Ground-Water Conditions, FMC Corporation, 495 East Brokaw Road, San Jose, California in 1989 (EMCON, 1989). In February 1990, the RWQCB adopted Order No. 90-032, Site Cleanup Requirements for: FMC Corporation Ground Systems Division and 495 East Brokaw Associates for the Property Located at: 495 East Brokaw Road, San Jose, Santa Clara County (RWQCB, 1990) requiring completion of Site characterization. In response, FMC submitted an Additional Soil and Ground-Water Investigation Report, FMC Corporation, 495 East Brokaw Road, San Jose, California in April 1991 (EMCON, 1991a), and an Addendum to Additional Soil and Ground-Water Investigation Report, FMC Corporation, 495 East Brokaw Road, San Jose, California in June 1991 (EMCON, 1991b). Quarterly groundwater monitoring was conducted and reports were submitted in accordance with Order No. 90-032. Order No. 90-032 was amended by Order No. 92-053, Amending SCO 90-032, Site Cleanup Requirements for: FMC Corporation-Ground Systems Division and 495 East Brokaw Associates, 495 East Brokaw Road, San Jose, Santa Clara County (RWQCB, 1992). Order No. 00-092, Final Site Cleanup Requirements and Recession of Orders Nos. 90-032 and 92-053 for: FMC Corporation and 495 East Brokaw Road, LLC for the property located at 495 East Brokaw Road, San Jose, Santa Clara County (RWQCB, 2000) was adopted on August 16, 2000 and rescinded Orders No. 90-032 and 92-053. Site groundwater monitoring is now occurring in accordance with the revised Self-Monitoring Program (SMP) for the Site dated January 18, 2002 (RWQCB, 2002). The primary VOCs detected in shallow zone groundwater at the Site are trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), and vinyl chloride. The presence of cis-1,2- 1-3 DCE and vinyl chloride are attributable to reductive dehalogenation of TCE. The two areas primarily impacted at the Site are the northeast corner and the east side of the building in the vicinity of the storm sewer. The nature and extent of impacts are well defined and limited. Historical data indicate that VOC migration in groundwater is minimal. The A-level aquifer beneath the Site has not been impacted with VOCs. A pilot test was performed in 1999 to evaluate the effectiveness of Hydrogen Release Compound (HRC) to stimulate anaerobic biodegradation of VOCs in Site soil and groundwater. The Pilot Study Results Report and Full-Scale Implementation Workplan for In-Situ Bioremediation Using HRC Injection (Workplan) (HSI GeoTrans, 2000) presented the successful results of the pilot study and a work plan for full-scale implementation. As part of the pilot study four pilot wells were installed. Full-scale implementation of enhanced bioremediation began in May 2000. A total of 103 HRC points were drilled at the northeast corner of the property (and along the northern boundary) and approximately 13,300 pounds of HRC were injected into the subsurface during May 2000. Ninety additional injection points were drilled and approximately 4,500 pounds of HRC were injected in November 2001 in accordance with the Work Plan Addendum for Continued In-Situ Bioremediation Using a Second Application of HRC (GeoTrans, 2001). As presented in the Five-Year Status Report and Semi-Annual Monitoring Report, January through June 2005, Former FMC Corporation Facility, 495 East Brokaw Road, San Jose, Santa Clara County, California, sufficient groundwater data have been collected in the southern portion of the Site to thoroughly characterize Site conditions and monitor the initial effectiveness of the enhanced biodegradation program (Parsons 2005a, Parsons 2005b). Continued semi-annual monitoring would produce unwarranted replicate data and create an unnecessary financial burden for FMC. Therefore, FMC proposed to monitor Site wells W-1, W-4, W-5, W-6, W-10, and W-13 for VOCs on an annual basis. Upon approval, wells in the vicinity of the off-site investigation (W-2, W-8, W-9, W-35 and W-36) would continue to be sampled for VOCs semi-annually, consistent with the current Revised SMP found in the RWQCB Final Site Cleanup Requirements, Order No. 00-092 (RWQCB, 2000). Additionally, FMC completed the two years of semi-annual enhanced biodegradation monitoring as proposed in the Data Transmittal and Assessment Report submitted to the RWQCB in June 2003. The data indicates that additional monitoring for enhanced biodegradation parameters is no longer warranted. Therefore, FMC proposed to discontinue monitoring for enhanced biodegradation parameters.

EI ID: 10353364 ***EI Description:*** Hazardous Waste Generator

Violations

Violation Date: 10/18/2018 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Notes:

Returned to compliance on 11/20/2018. Per the Hazardous Waste Tracking System, State ID: CAL000306134 is INACTIVE. Reactivate the EPA ID number via the electronic verification questionnaire (e-VQ) at https://dtsc-web01.dtsc.ca.gov/eVQ/Home.aspx.

Violation Description:

Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.

Violations

Violation Date: 10/18/2018 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Notes:

Returned to compliance on 11/20/2018. 1 x 15 gal drum of used coolant was not marked with the date it was emptied. If there are no plans to generate used coolant, make arrangements to have this drum recycled or picked up within 1 year of the empty date.

Violation Description:

Hazardous Waste Generator Program - Operations/Maintenance - General

Violations

Violation Date: 10/18/2018 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Notes:

Returned to compliance on 11/20/2018. Observed approx. 6 used oil filters on top of the 55 gal drum of used oil. Obtain a closed container with a complete hazardous waste label to transfer the filters to when they are done draining.

Violation Description:

Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.

Violations

Violation Date: 10/18/2018 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.5 25160.2 - California Health and Safety Code, Chapter 6.5, Section(s) 25160.2
Violation Notes:

Returned to compliance on 11/20/2018. Disposal records for 2017 were unavailable for review at the time of inspection. Obtain a copy of the receipt from 2017, and moving forward, retain all disposal records for 3 years.

Violation Description:

Failure of a generator of hazardous waste that meets the conditions to be transported on a consolidated manifest to comply with one or more of the required consolidated manifesting procedures and retain copies of receipts for three years.

Violations

Violation Date: 10/18/2018 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 40 CFR 1 265.33 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.33
Violation Notes:

Returned to compliance on 11/09/2018. Observed that the fire extinguishers have not been annually maintained. Last service date: 7/18/2018. Within the next 30 days, have the fire extinguishers recharged.

Violation Description:

Failure to test and maintain as necessary all facility communications or alarm systems, fire protection equipment, spill control equipment, and decontamination equipment to assure its proper operation in time of emergency.

Violations

Violation Date: 10/18/2018 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.95 25505.1 - California Health and Safety Code, Chapter 6.95, Section(s) 25505.1
Violation Notes:

Returned to compliance on 11/20/2018. Business is a tenant to Property Owner, Verity Properties, but has not provided written notification of its applicability and compliance with HMBP requirements. Template form provided.

Violation Description:

Failure to provide a copy of the business plan to the owner or the owner's agent within five working days after receiving a request for a copy from the owner or the owner's agent.

Violations

Violation Date: 10/18/2018 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 22 CCR 12 66262.34(e) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(e)
Violation Notes:

Returned to compliance on 10/29/2018. As evident by review of disposal records, the last pick-up of used oil occurred on 2/7/2017. Within the next 30 days, make arrangements to have the used oil picked up and retain all disposal documentation for 3 years. Note: Have the used oil picked up at least once a year.

Violation Description:

Failure to meet the following conditions of satellite accumulation regulations:

• Accumulate up to 55 gallons of hazardous waste or one quart of acute hazardous waste at or near the initial point of accumulation which was under the control of the operator.

• Total time hazardous waste can be accumulated onsite in any generator accumulation area is one year, i.e., the combined accmulation time at a satellite accumulation point and at a 90/180/270 accumulation area (depending on size of generator and distance transported), whichever comes first.

• The generator complies with section 66265.171, 66265.172, and 66265.173(a).

• The container must be clearly marked with the initial date that hazardous waste is first placed in the container and labelled with the words "Hazardous Waste" including specified information

• Container must be labelled with the date the satellite accumulation limit is reached and moved within three days after reaching the 55 gallon (or one quart) limit to a "90 day" accumulation area

• 55 gallons (or one quart of acute hazardous waste) of waste per process may be accumulated

Evaluations

Eval Date: 11/20/2018
Violations Found: No
Eval General Type: Other/Unknown
Eval Type: Other, not routine, done by local agency
Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS
Eval Notes:

On-site to conduct a follow-up inspection to routine inspection conducted on 10/18/2018. Observed the following violations as corrected: > G002: INACTIVE ID NUMBER > G035: ACCUMULATION TIME: POINT OF GENERATION > G053: CONSOLIDATED MANIFESTING: RECEIPT RETENTION > G110: MAINTENANCE AND OPERATION OF FACILITY > G112: EMERGENCY EQUIPMENT TESTING > G405: CONTAINER MARKING: CONTAMINATED CONTAINERS No further action is required at this time.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 11/20/2018
Violations Found: No
Eval General Type: Other/Unknown
Eval Type: Other, not routine, done by local agency
Eval Division: Santa Clara County Environmental Health
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

On-site to perform a permit investigation in response to owner Kuma Keneni notifying our office that he no longer stores used oil at 55 gallons or greater. Observed the following: - Used Oil: 1 x 30 gal drum - Disposal receipt retained. The 55 gal drum was picked up on 10/29/2018. Based on these observations, the facility's HMBP permit will be inactivated. The HMBP violation cited on the routine inspection conducted on 10/18/2018 will be closed.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 10/18/2018
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS
Eval Notes:

On-site to perform a routine Hazardous Waste Generator inspection. Per owner Kuma Keneni, there is very little work performed at Kuma Auto Repair Body & Paint. A walk-through of the facility was conducted with Mr. Keneni. The following hazardous waste streams were observed: - Used Oil: 1 x 55 gal drum + 1 x 15 gal roller - Used Coolant: 1 x 15 gal drum (observed as empty) There is no paint booth at this business. Mr. Keneni stated that he rarely does any painting or body work anymore. Mr. Keneni also stated that he does not generate used paper filters. Observed approximately 7 used oil filters (metal-cased) actively draining into the used oil drum. Mr. Keneni was informed that if he generates used coolant, his Hazardous Waste Generator permit category will need to be adjusted. He stated that he will make arrangements to get rid of the drum. Observed current emergency information posted in the shop. Weekly inspections of the hazardous waste storage area are [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 10/18/2018
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Santa Clara County Environmental Health
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

On-site to perform a routine Hazardous Materials Business Plan (HMBP) inspection. Per owner Kuma Keneni, there is very little work performed at Kuma Auto Repair Body & Paint. A walk-through of the facility was conducted with Mr. Keneni. The following hazardous materials were observed at or

above HMBP State-reportable thresholds: 1) Used Oil: 1 x 55 gal drum + 1 x 15 gal roller There is no paint booth at this business. Mr. Keneni stated that he rarely does any painting or body work anymore. Welding gases were observed below HMBP quantities. Business last submitted a complete HMBP via Santa Clara County FrontCounter on 3/20/2018. Inventory and owner/operator information reported matches what was observed during today's inspection. At the time of the HMBP annual certification, Mr. Keneni reviews the information to satisfy the requirement of annual HMBP Emergency Response and safety procedures training. A template was provided for him to document this training [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

EI ID: 10588909 **EI Description:** Chemical Storage Facilities

Violations

Violation Date: 02/09/2016 **Violation Source:** CERS
Violation Program: HW **Violation Division:** Santa Clara County Environmental Health
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Notes:

Manifests verifying proper disposal of waste paints and paint booth filters were unavailable for review during inspection. Please provide the most recent verification of proper disposal of these wastes to this agency.

Violation Description:

Failure to maintain uniform hazardous waste manifest, consolidated manifest, or bills of lading copies for three years.

Violations

Violation Date: 06/01/2023 **Violation Source:** CERS
Violation Program: HW **Violation Division:** Santa Clara County Environmental Health
Citation: 22 CCR 12 66262.34(e) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(e)
Violation Notes:

Violation Description:

Failure to meet the following conditions of satellite accumulation regulations:

• Accumulate up to 55 gallons of hazardous waste or one quart of acute hazardous waste at or near the initial point of accumulation which was under the control of the operator.

• Total time hazardous waste can be accumulated onsite in any generator accumulation area is one year, i.e., the combined accmulation time at a satellite accumulation point and at a 90/180/270 accumulation area (depending on size of generator and distance transported), whichever comes first.

• The generator complies with section 66265.171, 66265.172, and 66265.173(a).

• The container must be clearly marked with the initial date that hazardous waste is first placed in the container and labelled with the words "Hazardous Waste" including specified information

• Container must be labelled with the date the satellite accumulation limit is reached and moved within three days after reaching the 55 gallon (or one quart) limit to a "90 day" accumulation area

• 55 gallons (or one quart of acute hazardous waste) of waste per process may be accumulated

Violations

Violation Date: 06/01/2023 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 40 CFR 1 265.174 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.174
Violation Notes:

Facility could not clearly identify that personnel are inspecting waste areas weekly. Additionally, if inspections are occurring, they are not sufficient, as evidenced by the numerous hazardous waste labels with incomplete information, and the observation of what appeared to be used oil in secondary containment.

Violation Description:

Failure to inspect hazardous waste storage areas at least weekly and look for leaking and deteriorating containers.

Violations

Violation Date: 06/01/2023 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.95 25505.1 - California Health and Safety Code, Chapter 6.95, Section(s) 25505.1
Violation Notes:

Facility did not have evidence of notification to the property owner. See link below for a sample notification letter. Draft such a letter and send it to the property owner. Retain evidence, such as a copy of this letter.

Violation Description:

Failure to notify property owner in writing that the business is subject to the business plan program and has complied with its provisions.

Violations

Violation Date: 02/09/2016 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Notes:

Returned to compliance on 06/14/2016. 1 x 55 gallon drum of hazardous waste in the waste accumulation area was marked but the detail information was illegible.

Violation Description:

Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violation Date: 02/09/2016 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 40 CFR 1 265.174 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.174
Violation Notes:

Returned to compliance on 06/14/2016. As evident by 3 containers in the back corner of hazardous waste accumulation area that are maintained onsite with unknown contents, weekly inspections are not being conducted. Please identify these containers and properly dispose of any hazardous wastes.

Violation Description:

Failure to inspect hazardous waste storage areas at least weekly.

Violations

Violation Date: 06/01/2023 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health

Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Notes:

Violation Description:

Failure to meet the following container management requirements:
(a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste.
(b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

Violations

Violation Notes:

Returned to compliance on 06/14/2016. Facility has not completed a hazardous materials business plan (HMBP). Please go to the California Environmental Reporting System (CERS) at http://cers.calepa.ca.gov and create a user account, obtain user access, then enter all your facility, inventory, map and plans information to have a complete HMBP submittal. Questions regarding this process or if you need more time, please contact Jeffrey M. Higbee at 408-918-4785 or jeffrey.higbee@deh.sccgov.org

Violation Description:

Failure to complete and/or electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.

Violations

Violation Date: 06/01/2023 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Notes:

Violation Description:

Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Evaluations

Eval Date: 06/01/2023
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Santa Clara County Environmental Health
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

CERS ID 10588909 most recently submitted on 4/27/23. Training records were reviewed. The facility currently stores the following reportable materials: •

Oxygen (~280 cubic feet) • Lacquer thinner (110 gallons) • Waste coolant (60 gallons) Non-reportable materials include: • Used oil • Acetylene • Argon • Argon / carbon dioxide mix • Waterborne paint waste • Solvent paint waste • Sandpaper / bondo dust Action items: • Observed 5x 55-gallon blue poly drums containing various waterless cleaning products. If these products are considered hazardous materials, immediately report them in the facility's HMBP. If not considered hazardous, provide Safety Data Sheets to HMCD for review.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 02/09/2016
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Santa Clara County Environmental Health
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

HMBP threshold chemicals onsite today: 55 gallons waste coolant 55 gallons of used oil 55 gallons of waste paint/thinner; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 02/09/2016
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS
Eval Notes:

The used oil dolly was marked today with details; also the ER plan was posted.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 06/01/2023
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS
Eval Notes:

Onsite 5/25/23 to conduct a routine hazardous waste and Hazardous Materials Business Plan inspection. Alex George from HMCD was also present. Walkthrough was conducted with Enrique Espana and Miguel Espana. Paperwork review was conducted with Adriana Prado. This inspection concluded today with the issuance of this report. Facility is an auto body shop. Wastes generated include used oil, used coolant, paint-related materials, paint booth filters, and sandpaper/bondo dust. Emergency information was posted, and emergency equipment is maintained. Training is sufficient. State EPA ID CAL000387541 is active. As a small quantity hazardous waste generator, the facility may accumulate waste for 180 days before it must be disposed of. If shipping more than 200 miles, the facility has 270 days. However, some waste streams are eligible for accumulation of up to 1 year based on point of generation rules (also known as satellite accumulation). The following wastes are [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Regulated Programs

EI ID: 10349518 **EI Description:** Hazardous Waste Generator

Violations

Violation Date: 12/03/2019 **Violation Source:** CERS
Violation Program: HW **Violation Division:** Santa Clara County Environmental Health
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Notes:

Returned to compliance on 12/12/2019. The following hazardous waste containers were inadequately marked or labeled: -1 x 1 gallon plastic container of waste pump oil was missing "hazardous waste", accumulation start date, physical state, hazard properties, facility information -1 x 5 gallon red self-closing metal container of flammable solvents was missing a legible accumulation start date -1 x 5 gallon red self-closing metal container of AIBN was missing a legible accumulation start date

Violation Description:

Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violation Date: 12/03/2019 **Violation Source:** CERS
Violation Program: HW **Violation Division:** Santa Clara County Environmental Health
Citation: HSC 6.5 25189.5(a),25201(a) - California Health and Safety Code, Chapter 6.5, Section(s) 25189.5(a),25201(a)
Violation Notes:

Returned to compliance on 12/12/2019. As per one of the R&D department operators, the facility is disposing of soldering dross in either a sharps container or into the trash. Additionally, solder splash was observed to be on the floor in one of the R&D rooms near a soldering stations. As per Moinka Lee, this room is infrequently cleaned by a contracted sanitation company who then sweeps the floors and puts all floor debris in the trash. This material has California-regulated metals and should either be recycled with the scrap metal from the drill press/lathe or managed as hazardous waste.

Violation Description:

Failure to dispose of hazardous waste at a facility which has a permit from DTSC or disposing of hazardous waste at any point which is not authorized according to HSC 6.5.

Evaluations

Eval Date: 12/03/2019
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS
Eval Notes:

Conducted a Hazardous Waste Generator Routine Inspection with Jon Blazo from Hazardous Materials Compliance Division. Waste ID CAL000336313

is currently active. This facility is a medical device research and developing site that was observed generating or has the potential to generate the following hazardous waste streams: -Adhesives -IPA solution and wipes -AIBN solution -Pump oil -Compressor oil -Universal waste (lamps, batteries) -Solder dross -Metal shavings -Expired/off-spec chemicals Inspected interior and exterior of facility and trash cans. Inspection included review of all available hazardous waste disposal receipts from last 3 years. The facility operator indicated that employees receive training or demonstrate that they are thoroughly familiar with proper hazardous waste management, which includes weekly inspections of the hazardous waste tank storage areas. Emergency information was posted, emergency equipment was available for use and [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Violations

Violation Date: 04/04/2024 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Notes:

Facility failed to submit a hazardous materials business plan when storing and handling hazardous materials at or above HMBP reporting thresholds. The following hazardous materials were observed at or above reporting thresholds: - 55 gallons of new coolant - 3 x 55 gallons of used coolant (according to Mr. Than) - 3 x 55 gallons new oil (according to Mr. Than) - 405 cuft Nitrous Oxide Submit an HMBP within 30 days on the California Environmental Reporting System (CERS) and submit all of the elements that comprise a full HMBP (Facility Information, Hazardous Materials Inventory, Emergency Response and Training Plans). Contact me at stephanie.parrish@deh.sccgov.org or 408-918-3458 for assistance.

Violation Description:

Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.

Violations

Violation Date: 04/04/2024 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 40 CFR 1 262.34(d)(5)(ii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(ii)
Violation Notes:

No emergency response posting was observed posted identifying the name and phone number of emergency coordinators. Template posting was provided at the time of this inspection.

Violation Description:

Failure to post the following information next to the telephone:
(A) The name and telephone number of the emergency coordinator;
(B) Location of fire extinguishers and spill control material, and, if present, fire alarm; and

(C) The telephone number of the fire department, unless the facility has a direct alarm.

Violations

Violation Date: 04/04/2024 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 40 CFR 1 265.33 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.33
Violation Notes:

Fire extinguishers observed last serviced in August 2019. Fire extinguishers must be maintained in good condition and operable in case of emergencies annually. Ensure that fire extinguishers are tested and maintained at least annually to ensure proper operation.

Violation Description:

Failure to test and maintain as necessary all facility communications or alarm systems, fire protection equipment, spill control equipment, and decontamination equipment to assure its proper operation in time of emergency.

Violations

Violation Date: 04/04/2024 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: Un-Specified
Violation Notes:

Facility's hazardous waste permit has not been issued due to non-payment of permit fees. The facility owes $1,387.75. Continued non-payment may result in enforcement actions against the facility.

Violation Description:

Hazardous Waste Generator Program - Administration/Documentation - General Local Ordinance

Violations

Violation Date: 04/04/2024 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 40 CFR 1 265.35 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.35
Violation Notes:

It is unclear which drums of the 6 x 55 gallon drums located on either side of the roll-up door (3 on each side) contain hazardous waste. Each set of 3 drums are blocked from access by large pallets, materials, and forklift. This presents a safety risk in the event of an emergency. Maintain a clear aisle space to all areas of the facility, especially any hazardous waste.

Violation Description:

Failure to maintain aisle space to allow the unobstructed movement of personnel, fire protection equipment, spill control equipment, and decontamination equipment to any area of facility operation in an emergency, unless aisle space is not needed for any of these purposes.

Citation: 40 CFR 1 262.34(d)(5)(iii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(iii)
Violation Notes:

Based on the observed practices during inspection, facility employees are inadequately trained in hazardous waste management. Facility was informed of free waste training class offered by the County.

Violation Description:

Failure to ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies.

Violations

Violation Date: 04/04/2024 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 22 CCR 12 66262.40(c) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(c)
Violation Notes:

It is unclear how metal powder from the deburring area is managed. Deburring area observed with grinding and sanding equipment. No fine power observed on the ground surrounding this area. Mr. Than believes that employees sweep the area daily, yet it is unknown how the waste is disposed. A hazardous waste determination must be conducted on the metal powder. Sanding paper/materials may meet the hazardous waste criteria for regulated-metal content. Manage these materials as hazardous waste or perform a TTLC (and STLC if TTLC numbers indicate) for CAM17 metals. Additionally, fine powders (e.g., sanding dust) are considered hazardous waste, and no longer eligible for recycling, if particles are smaller than 100 microns, per CCR 66260.10.

Violation Description:

Failure to keep records of any test results, waste analyses, or other determinations made in accordance with section 66262.11 for at least three years from the date that the waste was last sent to on-site or off-site treatment, storage, or disposal.

Violations

Violation Date: 04/04/2024 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.95 25505.1 - California Health and Safety Code, Chapter 6.95, Section(s) 25505.1
Violation Notes:

Facility was unable to confirm that the property owner has been notified in writing that the facility is subject to HMBP regulation. A template notice will be provided via email.

Violation Description:

Failure to notify property owner in writing that the business is subject to the business plan program and has complied with its provisions.

Violations

Violation Date: 04/04/2024 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Notes:

On both sides of the roll up door in the back of the shop, observed 6 x 55 gallon drums of unknown contents, possibly used coolant and used or new oil, according to Mr. Than.

Violation Description:

Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violation Date: 04/04/2024 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Notes:

According to the Hazardous Waste Tracking System (HWTS) facility's State Waste ID Number CAL000447311 has been INACTIVE since 6/30/2020. Hazardous waste generators must maintain an active ID number at all times. Reactivate your ID number by submitting information to the electronic verification questionnaire (eVQ) or submit DTSC Form 1358 to the DTSC. Form 1358 provided at time of inspection.

Violation Description:

Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.

Violations

Violation Date: 04/04/2024 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 40 CFR 1 265.174 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.174
Violation Notes:

It is unclear which drums of the 6 x 55 gallon drums located on either side of the roll-up door (3 on each side) contain hazardous waste. Given the amount of obstruction to each set of drums, inspections of the hazardous waste storage area are not being conducted on a weekly basis. Begin inspecting all hazardous waste containers weekly, looking for leaks or container deterioration.

Violation Description:

Failure to inspect hazardous waste storage areas at least weekly and look for leaking and deteriorating containers.

Violations

Violation Date: 04/04/2024 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Notes:

Facility unable to provide documentation that training (relating to HMBP content and how to respond to a release of hazardous material) occurs annually. Begin documenting annual training and keep records that all employees have completed initial and annual HMBP training for three years.

Violation Description:

Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Violations

Violation Date: 04/04/2024 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.5 25160.2 - California Health and Safety Code, Chapter 6.5, Section(s) 25160.2
Violation Notes:

Consolidated manifest receipts for the last 3 years of hazardous waste pick-ups were not available for review during the inspection. Within 30 days, provide consolidated manifest receipt copies for all hazardous waste pick-ups in the last 3 years.

Violation Description:

Failure of a generator of hazardous waste that meets the conditions to be transported on a consolidated manifest to comply with one or more of the required consolidated manifesting procedures and retain copies of receipts for three years.

Evaluations

Eval Date: 10/08/2019
Violations Found: No
Eval General Type: Other/Unknown
Eval Type: Other, not routine, done by local agency
Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS
Eval Notes:

On-site at Authentic Machining Inc. to conduct a Hazardous Waste Generator permit investigation. Authentic Machining is a CNC machine shop that produces parts for industries such as aerospace, biotech, etc. This facility has 8 CNC machines in operation. Man Vu, production manager gave a walk through of the facility. New coolant enters the CNC machines, and the used coolant is stored in 3 55 gallon drums. Mr. Vu estimates the 3 drums of used coolant get picked up by a vendor roughly every 6 months to a year. Based on my observations, this facility will be given a 2205 (generates 100 kg to <5 tons/yr) hazardous waste permit from our office. Notes: Observed multiple drums of scrap metal throughout the facility. Mr. Vu states that these are recycled. Notes: EPA ID: CAL000447311, active since 7/5/2019; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Notes:

On-site at Authentic Machining Inc. to conduct a Hazardous Materials Business Plan (HMBP) permit investigation. Authentic Machining is a CNC machine shop that produces parts for industries such as aerospace, biotech, etc. This facility has 8 CNC machines in operation. Man Vu, production manager gave a walk through of the facility. These hazardous materials were observed above HMBP thresholds: 1 x 55 gal new lubricating oil 2 x 55 gal new coolant 3 x 55 gal used coolant Based on my observations, this facility will be given a BP01 (handles 1-3 reportable chemicals) permit from our office. Notes: The facility will be required to do an online submittal of their HMBP. https:// cers.calepa.ca.gov/ Email karl.etulle@cep.sccgov.org for assistance with HMBP submittal. Contact: Man Vu Man.V@Authenticmachining.com 669-275-9000 ext. 1001; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 04/10/2024
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS
Eval Notes:

Onsite to conduct a routine hazardous waste inspection. Sovann Uch, Hazardous Materials Specialist II, was present during inspection. Facility walk through with Production Controller, Justin Than, conducted on 4/4/2024 and concluded on 4/10/2024 with the issuance of this report. Facility is a machine shop that produces parts for aerospace and biotech industries. There are 5 CNC machines onsite and in operation. Materials used are aluminum, stainless steel, brass, and plastics. Facility appears to be a small quantity generator. State EPA ID: CAL000447311 is INACTIVE (see violation.) Facility generates the following hazardous waste that includes but is not limited to: - used oil/coolant - Used oily absorbent (no container observed) Since no containers are marked, and limited information from site contact, it is unclear the contents of every drum. Scrap metal is separated, collected and picked up for recycling, according to Mr. Than. Absorbent is readily available. [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Site History:	

Site History: One 500-gallon gasoline fuel underground storage tank (UST) was removed from the site in 1985. Limited excavation of the site was completed in 1998. According to records, approximately 125 tons of petroleum-hydrocarbon impacted soil was excavated and removed from the site. Investigative work at the site has included soil, groundwater, and soil vapor investigations. The first monitoring wells were installed at the site in 1994. In 2003, temporary soil gas probes were installed. In 2004, one extraction well was installed to remove free product at the site, and two additional extraction wells were installed in 2011. A pilot groundwater extraction test was also conducted in 2011. From September 2012 through October 2014, an air sparging system was operated onsite. Post-remediation groundwater sampling demonstrated that site conditions satisfy low-threat case closure criteria. Well destructions were approved in 2017, but work was delayed due to various reasons. Site wells were finally destroyed, and all final waste was removed in February 2020. Site Management Requirements: Residual contamination remains at the site that could pose an unacceptable risk under certain site development activities such as, but not limited to, site grading, excavation, or the installation of water wells. Therefore, the impact of the disturbance of any residual contamination or the installation of water well(s) in the vicinity of the residual contamination shall be assessed and appropriate action taken so that there is no significant impact to human health, safety, or the environment. This could necessitate additional sampling, health risk assessment, and mitigation measures. DEH and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, and installation of water wells. This notification shall include a statement that residual contamination exists on the property and list all mitigation actions, if any, necessary to ensure compliance with this site management requirement. The levels of residual contamination and any associated site risk are expected to reduce with time.

Violations

Violation Date:	12/19/2019	***Violation Source:***	CERS
Violation Program:	HMRRP	***Violation Division:***	Santa Clara County Environmental Health
Citation:	HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)		
Violation Notes:			

Returned to compliance on 01/23/2020. Observed 1 x ~200 cf cylinder of compressed methane located near one of the process tools that was not disclosed on the Hazardous Materials Inventory on the facility's prior HMBP. According to Mr. Hassan, the methane was used to experiment with a process, however it did not work out and the methane is destined to be returned to vendor. Ensure that the hazardous materials inventory is amended and electronically resubmitted within 30 days whenever there is any handling of a previously undisclosed hazardous material that is subject to HMBP

reporting (500 lbs solid material, 55 gal liquid, 200 cubic ft of gaseous material).

Violation Description:

Failure to electronically update business plan within 30 days of any one of the following events:
A 100 percent or more increase in the quantity of a previously disclosed material.
Any handling of a previously undisclosed hazardous materials at or above reportable quantities.
A change of business address, business ownership, or business name.
A substantial change in the handler's operations that requires modification to any portion of the business plan.

Violations

Violation Date: 12/19/2019 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 22 CCR 11 66261.7 - California Code of Regulations, Title 22, Chapter 11, Section(s) 66261.7
Violation Notes:

Returned to compliance on 01/28/2020. Observed 3 x 55 gal steel drums on secondary containment in the back mechanical pad that were observed to be empty. Mr. Hassan stated that the drums were intended to be picked up for recycling by their hazardous waste hauler during the prior pick-up, however it was not done. No markings indicating the date the drums were emptied could be observed on any of the drums. Ensure that all empty containers larger than 5 gal that previously held a hazardous waste/material are marked with the date it was emptied and properly manage within one year.

Violation Description:

Failure to manage empty containers greater than 5 gallons in capacity that previously held a hazardous material/waste in accordance with 22 CCR 11 66261.7 including but not limited to the following:

(e)(2)By reclaiming its scrap value onsite or shipping the container or inner liner to a person who reclaims its scrap value; or

(3) By reconditioning or re manufacturing the container or inner liner onsite for subsequent reuse, or shipping the container or inner liner to a person who reconditions or re-manufactures the container or inner liner; or

(4) By shipping the container or inner liner to a supplier or to another intermediate collection location for accumulation prior to managing the container or inner liner pursuant to subsections (e)(2) or (e)(3) of 22 CCR 11 66261.7; or

(i) By shipping the container or inner liner back to the supplier for the purpose of being refilled.

(f) A container or an inner liner removed from a container larger than five gallons in capacity which is managed pursuant to subsection (e) of 22 CCR 11 66261.7 shall be marked with the date it has been emptied and shall be managed within one year of being emptied.

Violations

Violation Date: 12/19/2019 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Notes:

Returned to compliance on 01/23/2020. Observed the following containers with incomplete or missing hazardous waste labels: Source Sub-Assembly: 1 x 55 gal steel drum containing contaminated water and bead blast near the slurry blast machine with no hazardous waste label Pump Shop: 1 x 10 gal step can containing solids contaminated with oxidizers (hydrogen peroxide) with no hazardous waste label Mechanical Pad: 1 x 55 gal steel drum with label indicating the contents as used oil with illegible accumulation start date 1 x ~10 gal plastic tote containing liquid from the condenser. Mr. Hassan stated this liqiud is water contaminated with used oil and is collected in the used oil drum. The plastic tote does not contain a label indicating the liquid as a hazardous waste. Ensure all containers containing a hazardous waste are properly marked with all required elements, listed below

Violation Description:

Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violation Date: 12/19/2019 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.5 25160.2 - California Health and Safety Code, Chapter 6.5, Section(s) 25160.2

Violation Notes:

Returned to compliance on 01/23/2020. According to Mr. Hassan, facility disposes of used oil not contaminated with arsenic through a separate waste vendor, however the receipts for the pickups of used oil were not available for review at the time of this inspection. Provide copies of the consolidated manifest receipts for three years to our office for review.

Violation Description:

Failure of a generator of hazardous waste that meets the conditions to be transported on a consolidated manifest to comply with one or more of the required consolidated manifesting procedures and retain copies of receipts for three years.

Violations

Violation Date: 12/19/2019 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Notes:

Returned to compliance on 12/30/2019. Facility's last HMBP submittal occurred on 10/11/2018. Facility has not electronically recertified the Hazardous Materials Businsess Plan by the October deadline. Review your HMBP and electronically resubmit with all necessary changes within 30 days.

Violation Description:

Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.

Violations

Violation Date: 12/19/2019 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Notes:

Returned to compliance on 01/27/2020. Observed 1 x 55 gal blue poly open-top drum, located in the hazardous waste storage area, containing solids contaminated with oxidizers with a hazardous waste label with an accumulation start date of 5/28/2018. Make arrangements for immediate removal of the waste and ensure that wastes are not held on-site for longer than 180 days.

Violation Description:

Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met:
(1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms.

(2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f).

(3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violations

Violation Date: 12/19/2019 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 22 CCR 12 66262.40(c) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(c)
Violation Notes:

Facility generates mechanical pump oil contaminated with arsenic as part of preventative maintenance of the implantation tools, as well as used oil from equipment maintenance unrelated to the implantation process. Used oil not contaminated with arsenic is disposed of through a separate hauler than is utilized for facility's other hazardous wastes. Used oil contaminated with arsenic is disposed of on a uniform hazardous waste manifest as Non-RCRA Hazardous Waste Liqiud (Used Oil) under state waste code 221. Perform a hazardous waste determination on the used oil contaminated with arsenic to determine whether the concentration of used oil meets or exceeds the federal limit for toxicity, and if determined to exceed the limit, begin managing as a RCRA hazardous waste.

Violation Description:

Failure to keep records of any test results, waste analyses, or other determinations made in accordance with section 66262.11 for at least three years from the date that the waste was last sent to on-site or off-site treatment, storage, or disposal.

Evaluations

Eval Date: 12/19/2019
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS
Eval Notes:

On-site with Senior Hazardous Materials Specialist Mickey Pierce for a routine hazardous waste inspection. Facility is an ion implantation service for silicon wafers for semiconductor and microelectronic application. Facility generates hazardous waste from the maintenance of equipment, including tools that utilize toxic gases such as arsine, phosphine, and boron trifluoride. Waste generated from the maintenance of these tools are contaminated with the deposition products of the process, including arsenic, and are managed as hazardous waste. Used oil generated from equipment not associated with process tools is disposed of as Non-RCRA hazardous waste. Facility also utilizes a slurry blast to maintain parts from the process tools. Water and media from the slurry blast are collected and managed as liquid contaminated with arsenic. Facility has satellite accumulation containers for wipes and solid material contaminated with hazardous waste from process maintenance, and [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Violations

Violation Date: 05/25/2023 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Notes:

Returned to compliance on 05/25/2023. 2x 55-gallon drums of waterborne paint waste were missing accumulation start dates. Mr. Springer corrected this violation during the time of inspection. No further actions required.

Violation Description:

Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violation Date: 04/08/2019 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Notes:

Returned to compliance on 05/30/2019. The following hazardous waste streams were stored on-site for longer than 180-day limit: Used oil stored between 7/21/16 - 12/27/17 & 12/27/18 - 3/26/19 Oily solids stored between 6/28/18 - 4/5/19 Waste paint & solvent between 3/30/17 - 1/4/18 & 6/26/18-4/5/19 Waste waterborne paint between 6/26/18 & 4/5/19 Disposal receipt for waste antifreeze was observed as 3/26/2019; no other receipt was observed.

Violation Description:

Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met:
(1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms.

(2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f).

(3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violation Description:

Failure to determine the status of any hazardous waste if a signed copy of the manifest isn't received within 35 days of the date the waste was accepted by the initial transporter and/or to submit an Exception Report to DTSC if a signed copy of the manifest isn't received within 60 days of the date the waste was accepted by the initial transporter.

Violations

Violation Date: 10/01/2015 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Notes:

Returned to compliance on 10/30/2015. 1 x 30 gallon plastic water based paint waste container missing hazardous property. 1 x 55 gallon waste coolant drum missing physical state and hazardous property marked. 1 x 55 gallon used oil drum was marked "Used Oil" but missing other detail information; including name/address, accumulation start date, physical state and hazardous property.

Violation Description:

Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violation Date: 05/25/2023 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Santa Clara County Environmental Health
Citation: 22 CCR 12 66262.34(e) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(e)
Violation Notes:

Returned to compliance on 05/31/2023. 1x 55-gallon drum of solvents/paint liquid waste was missing the accumulation start date. Mr. Springer corrected this violation during the inspection. 1x 55-gallon drum of used oil and 1x 55-gallon drum of used coolant did not have current and complete hazardous

waste labels attached to the containers. Each had a full hazardous waste label on the wall behind the drums. The used oil drum had a partially-filled hazardous waste label on the drum, but the generator information was for another facility in Vacaville. Ensure inaccurate information is defaced or removed. 1x 5-gallon carboy in the indoor waste area was not marked. Mr. Springer determined this was dirty water from the gun cleaner, and thus likely contaminated with waterborne paint waste.

Violation Description:

Failure to meet the following conditions of satellite accumulation regulations:

• Accumulate up to 55 gallons of hazardous waste or one quart of acute hazardous waste at or near the initial point of accumulation which was under the control of the operator.

• Total time hazardous waste can be accumulated onsite in any generator accumulation area is one year, i.e., the combined accmulation time at a satellite accumulation point and at a 90/180/270 accumulation area (depending on size of generator and distance transported), whichever comes first.

• The generator complies with section 66265.171, 66265.172, and 66265.173(a).

• The container must be clearly marked with the initial date that hazardous waste is first placed in the container and labelled with the words "Hazardous Waste" including specified information

• Container must be labelled with the date the satellite accumulation limit is reached and moved within three days after reaching the 55 gallon (or one quart) limit to a "90 day" accumulation area

• 55 gallons (or one quart of acute hazardous waste) of waste per process may be accumulated

Eval Notes:

On-site with Robin Ward, Hazardous Materials Specialist II, to conduct a Hazardous Waste Generator inspection. Facility is an auto body shop. Site walk through was conducted with Mary Oliver, owner. Hazardous waste streams observed include: waste solvent paint, waste solvent, waste waterborne paint, used oil,& waste antifreeze. ID CAL000156805 was active on day of inspection. Fire extinguisher, eye wash, and paint booth fire suppression maintenance is up-to-date. Absorbent was readily available in the form of kitty litter. Emergency Response information is posted. Employee training is documented. Disposal receipts for waste antifreeze, used oil, oily solids, waste solvent paint, and waste waterborne waste were reviewed. Facility has commercial laundering contract with Cintas. Hazardous waste storage areas are inspected weekly. Facility has a 3-stage clarifier on site used for collecting water from detailing area. Operator noted that waste is picked up ~7/8 [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Notes:

CERS ID 10350391. Property owner is also the business owner. Most recent HMBP submitted 8/25/22, and was reviewed. Training documentation was verified. Facility has the following reportable materials: • Used oil (55 gallons) • Used coolant (55 gallons) • Lacquer thinner (60 gallons) • Solvents/paint waste (55 gallons) • Waterborne paint waste (110 gallons) Below-threshold materials include: • Acetylene • Oxygen • Nitrogen • Argon / Carbon dioxide mix • Argon • Miscellaneous paints; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 05/25/2023
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS
Eval Notes:

Onsite to perform a routine hazardous waste and Hazardous Materials Business Plan (HMBP) inspection. Hazardous Materials Specialist Alex George from HMCD was also onsite. Facility is an auto body shop, and generates small amounts of used oil and used coolant, as well as paint and paint-related materials, and bondo dust. Facility also generates universal waste aerosols. Rags and uniforms are commercially laundered. Hazardous waste containers are inspected weekly. Emergency information is posted. Training is sufficient. State EPA ID CAL000156805 is active. Hazardous waste manifests and consolidated manifests were reviewed. Facility has a varying quantities of each waste stream, and therefore, some are subject to different accumulation time limits than others (due to point of generation rules). At this time, the following wastes are subject to the following times limits: • Used oil: 1 year • Used coolant: 1 year • Used bondo dust: 1 year • [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 04/08/2019
Violations Found: No
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Santa Clara County Environmental Health
Eval Program: HMRRP
Eval Source: CERS

Eval Notes:

CERS ID 10350391 HMBP was submitted and accepted on 12/6/18 Inventory was confirmed to be accurate Business owner is also property owner Employee training is documented and up-to-date HMBP is confirmed to be readily available; Note: data in [EVAL Notes] field for some records is truncated from the source.

EI ID: 10347841
EI Description: Chemical Storage Facilities

Violations

Violation Date: 10/14/2015
Violation Source: CERS
Violation Program: HW
Violation Division: Santa Clara County Environmental Health
Citation: HSC 6.5 Multiple Sections - California Health and Safety Code, Chapter 6.5, Section(s) Multiple Sections
Violation Notes:

Returned to compliance on 10/27/2015. 1 x 55 gallon metal drum of used oil was open (mesh grate on top).

Violation Description:

Haz Waste Generator Program - Operations/Maintenance - General

Violations

Violation Date: 10/14/2015
Violation Source: CERS
Violation Program: HMRRP
Violation Division: Santa Clara County Environmental Health
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Notes:

Returned to compliance on 10/27/2015. The mineral oil storage location was F10 and not noted accurately on the facility site plan/map - the scale only goes up to 7 on the site plan/map.

Violation Description:

Failure to complete and electronically submit a site map with all required content.

Enforcements

Enf Action Date: 10/14/2015
Enf Action Program: HMRRP
Enf Action Type: Notice of Violation (Unified Program)

Evaluations

Eval Date: 10/14/2015
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS
Eval Notes:

Recommendation: Keep separate drums of hazardous waste absorbant and new/used absorbant materials. Saturated absorbants may be hazardous for toxicity. Observed areas of absorbant use adjacent to lead acid batteries, the radiator recovery area and also in the used oil management area. Questions, please contact Jeffrey M. Higbee at 408-918-4785.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 10/14/2015
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Santa Clara County Environmental Health
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

HMBP Threshold Chemicals Onsite: Mineral Oil - unknown location & quantity (Randy or Rich/GM not available), but noted as 165 gallons in CERS Used Oil - 165 gal + Oxygen - 1600+ cubic feet Propane - 300 gal. + (3,000 cu. ft. reported in CERS) Batteries - 16,000 lbs. (lead acid) Acetylene - 14-cu. ft. Diesel - 220 gal. + New Oil - 220 gal. + Note: property owner noted in CERS is owner of Alco Iron & Metal The Hazardous Materials Business Plan is complete on CERS 3/7/15 and is accepted.; Note: data in [EVAL Notes] field for some records is truncated from the source.

This address was referred to the Regional Water Board by the Santa Clara Valley Urban Runoff Pollution Prevention Program as a potential source property of mercury and/or polychlorinated biphenyls (PCBs) concentrations to municipal storm drains. The Regional Water Board is currently assessing the next steps for the property.

Site History:	

A Site history / investigation background from approximately 1985 through 1999 and from approximately 1999 to 2002 is presented in a previous work plan and report (Cypress Environmental, June 15, 2000 and October 2002, respectively) (the October 2002 report also contains information on adjacent / neighboring sites). Another previous report contains background information on the adjacent site at 524 East Brokaw Road, San Jose (Environmental Investigation Services, Inc., January 25, 2010). The following is a summary of background information obtained from these and other documents, including quarterly groundwater monitoring reports for monitoring and sampling events in 2010-2011. The site was previously leased by John De Martini to Precision Roofing. The 1,000 gallon gasoline UST, operated by Precision Roofing, had a leak circa 1985. During UST removal (circa 1986) a hole was discovered in the tank and a soil sample from the fill end of the excavation contained 1,215 ppm TPHg. In December 1988, a grab groundwater sample collected from the tank pit contained 26,000 ppb TPHg; 4,900 ppb benzene; 600 ppb toluene; and 5,100 ppb xylenes. It is assumed that the grab groundwater sample was from a “tank pit” well, described as 3-inch diameter black plastic, installed in the backfill, this well was not seen during 2010-2011 quarterly monitoring events and it is unknown if it still exists. Three groundwater monitoring wells (PR-1, PR-2, and PR-3) were installed in August 1991 and five groundwater monitoring and sampling events were performed in July, August and October 2000, and May and July 2002, by Cypress Environmental. During this 2000-2002 period, the highest detections in groundwater samples from the three monitoring wells were 3,500 ppb TPHg; 750 ppb Benzene; and 100 ppb MTBE (toluene, ethyl benzene, and xylenes were below ESLs). A request for closure was presented, and no further action was proposed, in the October 2002 report (Cypress Environmental, October 2002), based on the following: “The source of the gasoline and BTEX was removed approximately 16 to 17 years ago” (note: in 2010, approximately 25 years ago) “Free product has not been observed in Site monitoring wells” “ Residual concentrations of BTEX in soil are well below the U.S. Environmental Protection Agency’s Preliminary Remediation Goals for industrial sites” “ TPHg and BTEX appear to be localized in close proximity to the former tank pit” “The Site does not appear to be a source of MtBE”, and “Data from the nearby Velcon Filters, Kamper Kits, and Phototron sites indicate that conditions in the area are conducive to natural attenuation (biodegradation)”. A review of the Santa Clara County Department of Environmental Health (SCCDEH) online files was performed for the Subject Site by E2C Inc (E2C) personnel on March 17, 2010 (Local Oversight Program Public Record Document Search, http://lustop.sccgov.org/files/06S1E30M04f/). In the Correspondence Files, a directive letter, dated November 23, 2003, was found from the Santa Clara Valley Water District (SCVWD), the former Local Oversight Agency for the Leaking Underground Storage Tank (LUST) Oversight Program. The November 23, 2003 letter acknowledged receipt of the October 2002 report, however, it did not concur with the request for case closure and proposal for no further action. Due to elevated levels of Total Petroleum Hydrocarbons as Gasoline (TPHg) and Benzene detected in groundwater samples from well PR-3, the letter recommended additional investigation in the vicinity of well PR-3 and continuing groundwater monitoring, and required submittal of a work plan to address these concerns. The files indicated that no assessment, investigation, cleanup, or monitoring activities occurred at the Site after July 18, 2002, the date of the last groundwater monitoring event. A directive letter dated August 11, 2009, from the SCCDEH required groundwater monitoring in January and July 2010. However, this letter was superseded by another SCCDEH directive letter dated January 13, 2010, requiring four consecutive quarterly groundwater monitoring events beginning with the First Quarter 2010, to be coordinated with the groundwater monitoring at the adjacent site at 524 East Brokaw Road. In March 2010, E2C Inc (E2C) was retained to perform the required quarterly groundwater monitoring. Due to coordination and scheduling

conflicts with the adjacent 524 East Brokaw Road site, on March 5, 2010, the SCCDEH agreed that quarterly groundwater monitoring at the Subject Site may begin with the Second Quarter 2010. Four consecutive groundwater monitoring and sampling events were performed by E2C in April, July, and October 2010, and January 2011. During this 2010-2011 period, the highest detections in groundwater samples from the three monitoring wells were 260 ppb TPHg; 1.2 ppb Benzene; and toluene, ethyl benzene, xylenes and MTBE not detected or below ESLs. The report of the January 2011 groundwater monitoring and sampling event concluded the following. Historically, the primary constituents of concern (COC) were benzene and TPHg in cross-gradient well PR-2 and up-gradient well PR-3. The highest previous detections in groundwater samples from well PR-2 were 83 µg/L benzene (7/10/00) and 1,900 µg/L TPHG (5/2/02), and the highest previous detections in groundwater samples from well PR-3 were 750 µg/L benzene (7/12/02) and 3,500 µg/L TPHg (5/2/02). Note that historically (2000-2002), results of groundwater samples from down-gradient well PR-1 were almost all below detection limits with the exception of two trace level detections of TPHg. The current First Quarter (January) 2011, Fourth Quarter (October) 2010, Third Quarter (July) 2010 and Second Quarter (April) 2010 sample results are significantly below the previous detected concentrations from the years 2000 through 2002. The January 2011 results were almost all below method detection limits with the exception of a few very low trace level detections of TPHg, benzene and MTBE just slightly above detection limits; these traces were lower than both the corresponding Environmental Screening Level (ESL) (RWQCB, November 2007, Revised May 2008) and Maximum Contaminant Level (MCL) (CDPH, November 2008). The January 2011 groundwater monitoring event was the fourth of four consecutive quarterly events required by the Santa Clara County Department of Environmental Health (SCCDEH). Groundwater sample analytical results have mostly remained below detection limits, or at trace levels below or only slightly above screening levels, for the four consecutive quarterly monitoring events from April 2010 through January 2011. Sample results from the last of the four quarterly monitoring events (January 2011) were all below ESLs and MCLs. The available data indicates the following: • residual dissolved petroleum hydrocarbon concentrations in groundwater are mostly at non-detectable levels with some low to trace level concentrations (all below ESLs and MCLs in January 2011), • the “plume” is stable or shrinking, and • Natural attenuation is occurring or can be expected to occur over time.

A Site history / investigation background from approximately 1985 through 1999 and from approximately 1999 to 2002 is presented in a previous work plan and report (Cypress Environmental, June 15, 2000 and October 2002, respectively) (the October 2002 report also contains information on adjacent / neighboring sites). Another previous report contains background information on the adjacent site at 524 East Brokaw Road, San Jose (Environmental Investigation Services, Inc., January 25, 2010). The following is a summary of background information obtained from these and other documents, including quarterly groundwater monitoring reports for monitoring and sampling events in 2010-2011.

The site was previously leased by John De Martini to Precision Roofing. The 1,000 gallon gasoline UST, operated by Precision Roofing, had a leak circa 1985. During UST removal (circa 1986) a hole was discovered in the tank and a soil sample from the fill end of the excavation contained 1,215 ppm TPHg. In December 1988, a grab groundwater sample collected from the tank pit contained 26,000 ppb TPHg; 4,900 ppb benzene; 600 ppb toluene; and 5,100 ppb xylenes. It is assumed that the grab groundwater sample was from a "tank pit" well, described as 3-inch diameter black plastic, installed in the backfill, this well was not seen during 2010-2011 quarterly monitoring events and it is unknown if it still exists. Three groundwater monitoring wells (PR-1, PR-2, and PR-3) were installed in August 1991 and five groundwater monitoring and sampling events were performed in July, August and October 2000, and May and July 2002, by Cypress Environmental. During this 2000-2002 period, the highest detections in groundwater samples from the three monitoring wells were 3,500 ppb TPHg; 750 ppb Benzene; and 100 ppb MTBE (toluene, ethyl benzene, and xylenes were below ESLs).

A request for closure was presented, and no further action was proposed, in the October 2002 report (Cypress Environmental, October 2002), based on the following:

"The source of the gasoline and BTEX was removed approximately 16 to 17 years ago" (note: in 2010, approximately 25 years ago)
"Free product has not been observed in Site monitoring wells"
"Residual concentrations of BTEX in soil are well below the U.S. Environmental Protection Agency's Preliminary Remediation Goals for industrial sites"
"TPHg and BTEX appear to be localized in close proximity to the former tank pit"
"The Site does not appear to be a source of MtBE", and
"Data from the nearby Velcon Filters, Kamper Kits, and Phototron sites indicate that conditions in the area are conducive to natural attenuation (biodegradation)".

A review of the Santa Clara County Department of Environmental Health (SCCDEH) online files was performed for the Subject Site by E2C Inc (E2C) personnel on March 17, 2010 (Local Oversight Program Public Record Document Search, http://lustop.sccgov.org/files/06S1E30M04f/). In the Correspondence Files, a directive letter, dated November 23, 2003, was found from the Santa Clara Valley Water District (SCVWD), the former Local Oversight Agency for the Leaking Underground Storage Tank (LUST) Oversight Program. The November 23, 2003 letter acknowledged receipt of the October 2002 report, however, it did not concur with the request for case closure and proposal for no further action. Due to elevated levels of Total Petroleum Hydrocarbons as Gasoline (TPHg) and Benzene detected in groundwater samples from well PR-3, the letter recommended additional investigation in the vicinity of well PR-3 and continuing groundwater monitoring, and required submittal of a work plan to address these concerns. The files indicated that no assessment, investigation, cleanup, or monitoring activities occurred at the Site after July 18, 2002, the date of the last groundwater monitoring event.

A directive letter dated August 11, 2009, from the SCCDEH required groundwater monitoring in January and July 2010. However, this letter was superseded by another SCCDEH directive letter dated January 13, 2010, requiring four consecutive quarterly groundwater monitoring events beginning with the First Quarter 2010, to be coordinated with the groundwater monitoring at the adjacent site at 524 East Brokaw Road. In March 2010, E2C Inc (E2C) was retained to perform the required quarterly groundwater monitoring. Due to coordination and scheduling conflicts with the adjacent 524 East Brokaw Road site, on March 5, 2010, the SCCDEH agreed that quarterly groundwater monitoring at the Subject Site may begin with the Second Quarter 2010.

Four consecutive groundwater monitoring and sampling events were performed by E2C in April, July, and October 2010, and January 2011. During this 2010-2011 period, the highest detections in groundwater samples from the three monitoring wells were 260 ppb TPHg; 1.2 ppb Benzene; and toluene, ethyl benzene, xylenes and MTBE not detected or below ESLs. The report of the January 2011 groundwater monitoring and sampling event concluded the following.

Historically, the primary constituents of concern (COC) were benzene and TPHg in cross-gradient well PR-2 and up-gradient well PR-3. The highest previous detections in groundwater samples from well PR-2 were 83 µg/L benzene (7/10/00) and 1,900 µg/L TPHG (5/2/02), and the highest previous

detections in groundwater samples from well PR-3 were 750 µg/L benzene (7/12/02) and 3,500 µg/L TPHg (5/2/02). Note that historically (2000-2002), results of groundwater samples from down-gradient well PR-1 were almost all below detection limits with the exception of two trace level detections of TPHg.

The current First Quarter (January) 2011, Fourth Quarter (October) 2010, Third Quarter (July) 2010 and Second Quarter (April) 2010 sample results are significantly below the previous detected concentrations from the years 2000 through 2002. The January 2011 results were almost all below method detection limits with the exception of a few very low trace level detections of TPHg, benzene and MTBE just slightly above detection limits; these traces were lower than both the corresponding Environmental Screening Level (ESL) (RWQCB, November 2007, Revised May 2008) and Maximum Contaminant Level (MCL) (CDPH, November 2008).

The January 2011 groundwater monitoring event was the fourth of four consecutive quarterly events required by the Santa Clara County Department of Environmental Health (SCCDEH). Groundwater sample analytical results have mostly remained below detection limits, or at trace levels below or only slightly above screening levels, for the four consecutive quarterly monitoring events from April 2010 through January 2011. Sample results from the last of the four quarterly monitoring events (January 2011) were all below ESLs and MCLs. The available data indicates the following:

• residual dissolved petroleum hydrocarbon concentrations in groundwater are mostly at non-detectable levels with some low to trace level concentrations (all below ESLs and MCLs in January 2011),

• the "plume" is stable or shrinking, and

• Natural attenuation is occurring or can be expected to occur over time.

Site History:	

The Site is located at 524 East Brokaw Road, San Jose, California. The Site is currently occupied by Bodystyle, an auto repair company that uses one commercial building. The building was formerly occupied by Phototron, a commercial film processing laboratory. The remaining portion of the site is two asphalt parking areas on the northwest and southeast sides of building, and two driveways. The site formerly had one 550-gallon UST located near the southeastern side of the building (Figure 2). The UST reportedly stored gasoline. The property is surrounded by commercial uses. 1987 The 550-gallon UST was removed from the site in June by West Coast Tank Testing, and confirmation soil sampling revealed soil samples collected from the tank pit contained 7,500 parts per million (ppm) total petroleum hydrocarbons as gasoline (TPH-g) and 2,300 ppm total petroleum hydrocarbons as diesel (TPH-d). One groundwater sample was collected from the tank pit and results of analysis revealed concentrations of TPH-g at 310 ppm, TPH-d at 970 ppm, and benzene at 23 ppm. Additional over excavation was performed and approximately 80 cubic yards of gasoline and diesel impacted soil was removed from the former tank pit on June 24, 1987 and disposed of at Kettleman Hills landfill. In August, Argus Consulting Engineers installed monitoring well MW-1 adjacent to the former tank cavity. A groundwater sample collected from MW-1 revealed concentrations of TPH-g at 80 ppm and benzene at 6.5 ppm. In December 1987 three additional soil borings were drilled and three soil and one groundwater sample was collected. Analysis of these samples revealed low concentrations of petroleum hydrocarbons. 1991 Four monitoring wells, MW-2, MW-3, MW-4 and MW-5, were installed in December. 1992 In December, two additional monitoring wells MW-6 and MW-7 were installed. A review of laboratory analysis of the TPH-d results revealed the TPH-d was not characteristic of diesel fuel. The previous TPH-d detections were determined to be heavier components of gasoline, (Clark & Witham, Inc. August 4, 1993), and TPH-d analysis of soil and groundwater samples was discontinued. Groundwater sampling was performed on all of the wells for two quarters in 1992, three quarters in 1995, one quarter in 1996, two quarters in 1997, one quarter in 1998, one quarter in 1999, and two quarters in 2001. 1997 Clark & Witham, Inc. prepared a Corrective Action Plan (CAP) in June recommending monitored natural degradation as the appropriate corrective action for the subject property. The Santa Clara Valley Water district concurred with the CAP recommendations and requested regular monitoring to gauge the progress of the natural attenuation. 2001 After reviewing the site investigation reports, Santa Clara Valley Water District issued a Monitoring and Reporting Program order requiring regular monitoring at the Site. The most recent groundwater sampling occurred in December 2001 and reported in January 2002 by PES Environmental Inc. (PES). According to the December, 2001 Quarterly Monitoring report significant decreases of benzene, toluene, ethylbenzene and xylenes (BTEX) concentrations had occurred at MW-1. PES also concluded that based on the absence of detectable concentrations of TPH-g and BTEX compounds at well MW-6, located cross-gradient to the source area, the presence of low concentrations of MTBE at well MW-6 may suggest an offsite source for this compound. 2009 In December the Santa Clara County Department of Environmental Health required one full year of quarterly monitoring. EIS redeveloped all wells and conducted quarterly groundwater monitoring sampling events in January, April, July, and October of 2010.

Composting Method:	
Grndwtr Monitoring Frequency:	# OF WELLS MONITORED - QUARTERLY : 7 REASONS FOR QUARTERLY OR MONTHLY OR OTHER GROUNDWATER MONITORING: Other - Site is out of compliance. Most recent groundwater sampling occurred in December 2001. Quarterly sampling was required. Requested one year of quarterly sampling after which the DEH will consider reducing sampling frequency.
Designated Beneficial Use Desc:	Municipal and Domestic Supply, Agricultural Supply, Industrial Service Supply, Industrial Process Supply
Site History:	

The Site is located at 524 East Brokaw Road, San Jose, California. The Site is currently occupied by Bodystyle, an auto repair company that uses one commercial building. The building was formerly occupied by Phototron, a commercial film processing laboratory. The remaining portion of the site is two asphalt parking areas on the northwest and southeast sides of building, and two driveways. The site formerly had one 550-gallon UST located near the southeastern side of the building (Figure 2). The UST reportedly stored gasoline. The property is surrounded by commercial uses.

1987

The 550-gallon UST was removed from the site in June by West Coast Tank Testing, and confirmation soil sampling revealed soil samples collected from the tank pit contained 7,500 parts per million (ppm) total petroleum hydrocarbons as gasoline (TPH-g) and 2,300 ppm total petroleum hydrocarbons as diesel (TPH-d). One groundwater sample was collected from the tank pit and results of analysis revealed concentrations of TPH-g at 310 ppm, TPH-d at 970 ppm, and benzene at 23 ppm. Additional over excavation was performed and approximately 80 cubic yards of gasoline and diesel impacted soil was removed from the former tank pit on June 24, 1987 and disposed of at Kettleman Hills landfill.

In August, Argus Consulting Engineers installed monitoring well MW-1 adjacent to the former tank cavity. A groundwater sample collected from MW-1 revealed concentrations of TPH-g at 80 ppm and benzene at 6.5 ppm. In December 1987 three additional soil borings were drilled and three soil and one groundwater sample was collected. Analysis of these samples revealed low concentrations of petroleum hydrocarbons.

1991

Four monitoring wells, MW-2, MW-3, MW-4 and MW-5, were installed in December.

1992

In December, two additional monitoring wells MW-6 and MW-7 were installed. A review of laboratory analysis of the TPH-d results revealed the TPH-d was not characteristic of diesel fuel. The previous TPH-d detections were determined to be heavier components of gasoline, (Clark & Witham, Inc. August 4, 1993), and TPH-d analysis of soil and groundwater samples was discontinued. Groundwater sampling was performed on all of the wells for two quarters in 1992, three quarters in 1995, one quarter in 1996, two quarters in 1997, one quarter in 1998, one quarter in 1999, and two quarters in 2001.

1997

Clark & Witham, Inc. prepared a Corrective Action Plan (CAP) in June recommending monitored natural degradation as the appropriate corrective action for the subject property. The Santa Clara Valley Water district concurred with the CAP recommendations and requested regular monitoring to gauge the progress of the natural attenuation.

2001

After reviewing the site investigation reports, Santa Clara Valley Water District issued a Monitoring and Reporting Program order requiring regular monitoring at the Site. The most recent groundwater sampling occurred in December 2001 and reported in January 2002 by PES Environmental Inc. (PES). According to the December, 2001 Quarterly Monitoring report significant decreases of benzene, toluene, ethylbenzene and xylenes (BTEX) concentrations had occurred at MW-1. PES also concluded that based on the absence of detectable concentrations of TPH-g and BTEX compounds at well MW-6, located cross-gradient to the source area, the presence of low concentrations of MTBE at well MW-6 may suggest an offsite source for this compound.

2009

In December the Santa Clara County Department of Environmental Health required one full year of quarterly monitoring. EIS redeveloped all wells and conducted quarterly groundwater monitoring sampling events in January, April, July, and October of 2010.

Claim No:
Claim Status:
A2022 Assembly District: 24
A2022 Congressional District: 17
A2022 Senate District: 10
Site History:

Soil samples collected in 1989 during the removal of an underground storage tank used to collect waste/rinse water from a painting operation contained elevated concentrations of TCE and other volatile organic compounds. This area is a suspected source of VOCs detected in groundwater samples collected at this site and the adjacent property, the former FMC site at 495 East Brokaw Road. The property owner of 1819 Junction Ave. assessed the soil and groundwater pollution starting in July 2015. In December 2018, a pilot injection test was conducted by injecting substrates to promote the degradation of volatile organic compounds in groundwater.. Post-remediation groundwater monitoring was conducted and the case was closed in February 2022.

Title Description Comments:

Call Summary - with Terry McManus of GES. Terry indicated that they will likely need an extension for the Remedial Action Plan (RAP) that is currently due on October 30, 2017. Terry indicated that they are still of the opinion that the pollution on the Junction Oaks property was from the former FMC site. We briefly reviewed the soil quality data collected at the property boundary on the FMC site in 1989 and the Junction Oaks site in 2016-17 and that data

did NOT point to a significant source of VOCs from the former FMC site. Based on the soil and groundwater data collected at the former underground storage and wash rack at the JO site, the Water Board considers this area as a source of VOCs. The Water Board would welcome any other data that would revise that interpretation. Terry indicated that he will reach out to FMC (Stephen Carlton) and try & coordinate a remedial effort for the sites. Terry will also request and extension for the RAP, likely till the end of November 2017.
