## **Power Plant operation**

Bottle Rock Power LLC (BRP) went into stand down mode on April 6 2015. I have complained about the amount of chemicals stored there in the past. On Oct 13th 2016 I saw there was still 24 55 gallon drums and 29 275 gallon IBC totes stored on the Power plant foot print. After going to the BRP web site it stated that they were selling all the equipment needed to operate the power plant. This raises a number of questions. Where is the run off from the power plant going. Are they routing these fluids into the one working injection well? Into the large cistern under the power plant or is it going the stream systems. I have already filed a Cal EPA complaint COMP-11055. Where are the documents concerning decommissioning of this power plant. If all the equipment is for sale this should have been the the first step.
