1 P R O C E E D I N G S

2 JULY 11, 2014

9:34 A.M.

3 MS. ZOCCHETTI: Good morning, happy Friday to
4 everyone. I'm Kate Zocchetti. I'm the Office Manager
5 of the Renewable Energy Office here at the Energy
6 Commission.

7 Before we have introductions, I'd like to just
8 go over the agenda, briefly, and then some housekeeping.

9 We'll have a little slide about how you can
10 participate in today's workshop, welcome and opening
11 remarks from Commissioner Hochschild.

12 The purpose of our workshop today, then we will
13 give a short staff presentation, followed by the
14 opportunity for public comments. And we'll talk about
15 how that happens. And then we'll go into next steps.

16 You can find handouts of today's presentation,
17 and also the workshop notice, and Attachment A on the
18 front desk.

19 The restrooms are located right outside these
20 main doors and to the left.

21 We have a snack bar on the second floor. We
22 don't think we'll go into the afternoon, but if we do we
23 will break for lunch, and there are local restaurants
24 within walking distance.

25 The emergency evacuation procedures, if you hear

1 a bell, see flashing lights please following staff out
2 the main doors here and we'll convene at the park
3 kiddie-corner here.

4 And please remain orderly and follow traffic
5 lights, and wait there until you get the okay to come
6 back in.

7 We are on WebEx today and today's workshop is
8 being recorded.

9 We will have our presentation from today posted
10 on our website probably next week.

11 To participate in today's workshop, if you are
12 here in person and you'd like to comment, please fill
13 out a blue card that's located on the desk when you came
14 in, and give it to one of the staff members.

15 If you're on WebEx, we will take your comments
16 by using the little "raise hand" function or you can
17 type in your question to our WebEx folks here in the
18 room.

19 We will also have opportunities to comment via
20 phone. All the phones are muted at this time. Please
21 mute your own phone, as well, and only unmute it when
22 you want to ask a question.

23 We will be taking written comments up until July
24 28th, and those instructions will be provided later.

25 So, at this time I'd like to introduce my

1 colleagues. Emily Chisolm is closest on the desk here.
2 Angie Gould, who is just back from maternity leave,
3 congratulations Angie, so she's trying to get up to
4 speed, again.

5 And Gabe Herrera, our staff counsel.

6 And on our WebEx is Theresa Daniels and Brian
7 McCullough.

8 And I'd like to introduce Commissioner
9 Hochschild and his advisors.

10 And, Commissioner Hochschild, would you like to
11 have some opening remarks?

12 COMMISSIONER HOCHSCHILD: Sure, thank you, Kate,
13 and good morning and welcome to everybody.

14 For those of you who were there on Monday, at
15 the Intersolar Conference, we had -- Governor Brown gave
16 a spectacular speech on sort of the vision for the
17 future and for solar in California. And it was very
18 inspiring.

19 And so, part of this workshop is really to make
20 sure, as we're proceeding down the RPS path that we have
21 the regs where they need to be.

22 It's a very difficult choice, obviously. Every
23 time you make a change, there's a lot of ramifications
24 for that.

25 So, we're going to stay as long as it takes to

1 hear everybody's views on this today. I want to really
2 dig as deep as we can.

3 And, actually, for my benefit if I could ask if
4 we could do a quick round of introductions for the
5 people who are in the room? Just quickly just say your
6 name and your organization.

7 And when we come to staff, if you can also just
8 say, again, your area of responsibility so people know
9 what you're doing.

10 So, if we could just do that quickly. Walker,
11 maybe we could just start with you.

12 (Whereupon, the audience introduces themselves
13 off the record)

14 COMMISSIONER HOCHSCHILD: I'd like to add, the
15 people who introduced yourself, can you please drop a
16 business card off with the court reporter at some point
17 during the day, just to make his job a little easier.

18 MS. CHISOLM: I'm Emily Chisolm, I'm over POU
19 compliance.

20 MS. GOULD: Angie Gould, POU compliance and
21 verification.

22 MR. HERRERA: Gabe Herrera with the Energy
23 Commission's Legal Office. I provide advice to the
24 Commission on the RPS implementation, including POU
25 regs.

1 MR. CAMACHO: So, Emilio Camacho. I'm advisor
2 to Commissioner Hochschild.

3 MR. TAYLOR: And Gabriel Taylor, advisor also to
4 Commissioner Hochschild.

5 COMMISSIONER HOCHSCHILD: Great, okay, thanks
6 everybody and welcome.

7 Take it away, Kate.

8 MS. ZOCCHETTI: Thank you. Again, I'd like to
9 remind everyone, if you do have comments today, when we
10 get to that portion you can give your business card to
11 the court reporter and also announce yourself at the
12 podium so that the folks on WebEx and on the phone can
13 know who's speaking.

14 And at this time I'd like to invite Emily
15 Chisolm to come up and provide the staff presentation.
16 Thank you.

17 MS. CHISOLM: Hi everyone. So, first is the
18 purpose of the workshop. Today we will introduce the
19 proposed scope of amendments and issues identified to
20 date, a preliminary schedule for adoption of the
21 amendments to the regulations.

22 And we will be soliciting initial comments from
23 stakeholders regarding the scope of amendments and
24 options for addressing issues.

25 A little recent legislative background, the 33-

1 percent RPS was established by SB X12, in 2011. And the
2 Energy Commission adopted implementing regulation in
3 June of 2013, which were effective in October of 2013.

4 The RPS was revised by Senate Bill 591 in 2013,
5 by adding an exemption for a POU that receives at least
6 50 percent of its retail sales from qualifying hydro.

7 The topics for amendments are implementing
8 Senate Bill 591; clarifying the portfolio content
9 category for POU-owned or procured DG systems;
10 clarifying the definition of retail sales; clarifying
11 the meaning of resale, clarifying the subtraction of
12 generation under amended contracts less than 10 years
13 for purposes of excess procurement; and hourly data for
14 dynamic transfer agreements.

15 Topic one is implementing Senate Bill 591. SB
16 591 exempts a POU that receives greater than 50 percent
17 of its retail sales from its own hydro-electric
18 generation, and excuses the POU from having to procure
19 additional renewables in excess of either the portion of
20 the POU's retail sales not supplied by its own
21 qualifying hydro-electric generation, or the POU's
22 adopted cost limitation.

23 The first set of questions is how to qualify for
24 the exemption. When should 50 percent of retail sales
25 be calculated and when should the POU report info on

1 qualifying conditions?

2 The second set of the questions are for how the
3 exemption will be applied.

4 Should the RPS target be based on a POU's total
5 retail sales or remaining retail sales not met by
6 qualifying hydro?

7 Should the portfolio balance requirements be
8 applied?

9 Should the RPS requirements be annual or based
10 on a compliance period?

11 And how should the Energy Commission verify the
12 RPS exemption is being applied correctly?

13 Topic two is the portfolio content category for
14 POU-owned or procured distributed generation.

15 Should the generation from a DG system at an
16 RPS-certified facility, be classed as PCC-1 if the
17 system is POU owned or a POU procures bundled
18 electricity generation from the system owner?

19 Does it matter if the procured generation is
20 measured behind the meter?

21 If generation is used on site, is it available
22 to be procured by a POU?

23 Does it violate section 302(a)(1) if the POU
24 procures a bundled product and sells electricity to the
25 system owner?

1 Should the rules change if a third party owns or
2 installs the DG system?

3 And could a facility do net metering if a POU
4 procures bundled electricity and sells electricity to
5 the system owner?

6 Topic three is the definition of retail sales.
7 Should the definition of retail sales be clarified to
8 properly exclude POUs' consumptive load?

9 And if so, how can consumptive demand be
10 differentiated from retail sales?

11 We do have the current definition for retail
12 sales there for anyone who hasn't memorized it.

13 And the definition of resale is topic four.
14 Should resale be defined in the regulations?

15 We currently have a definition in our frequently
16 asked questions that says a resale is a POU purchase
17 from another RPS-obligated entity.

18 Topic five is contract amendments and excess
19 procurement. Should the regulations address the term of
20 amended contracts for calculating excess procurement?

21 Considering that section 3206(a)(1)(a) requires
22 subtraction of generation under contracts less than 10
23 years from excess procurement, unless the contract is
24 counted full, how should contracts be treated for excess
25 procurement if amended to lengthen the contract term?

1 And the last topic, 6, dynamic transfer
2 agreements. There are two types of dynamic transfers,
3 dynamically scheduled and pseudo-ties.

4 Because the electricity products under a
5 dynamically scheduled agreement are not necessarily
6 scheduled into a CBA, we are asking should the Energy
7 Commission verify dynamic schedules on an hourly basis?

8 Oh, sorry, okay. Next we have the Energy
9 Commission's preliminary schedule. The first four dates
10 there are the current workshop and the comment period
11 that are happening right now.

12 And then the next set of dates, kind of the
13 bottom half, those are dates associated with the formal
14 rulemaking beginning with the notice of proposed action
15 and then they are all tentative.

16 All right, short and sweet, we are now into
17 public comments. And maybe I'll switch places with
18 Kate.

19 MS. ZOCCHETTI: So, of course, you can continue
20 to provide blue cards if something comes up and you want
21 to comment here, at the workshop.

22 I am taking these in no particular order. Andy
23 Schwartz.

24 And I should just clarify that we aren't taking
25 any topic in any particular order. We didn't want to

1 have people coming up and back, and up and back for each
2 topic. So, we thought we do the whole presentation and
3 then topics are whatever you care to comment on.

4 MR. SCHWARTZ: Great. Commissioner and
5 Commissioner's staff, thank you for the opportunity to
6 speak today.

7 So, I'm here on -- my name is Andy Schwartz.
8 I'm here on behalf of the Alliance for Solar Choice.

9 The Alliance is a membership organization
10 comprised of the leading solar installers in the
11 country, comprising the vast majority of installations
12 that are going in today.

13 I'm here to speak on, I guess it's question
14 number two, primarily, related to the portfolio content
15 category designations.

16 So, I think I can keep my comments fairly brief.
17 We'll provide more detailed feedback, on the questions
18 that were asked, in our written comments.

19 So, the Alliance for Solar Choice, or TASC, does
20 support the categorization of RECs that are sold to
21 utilities from behind-the-meter facilities as portfolio
22 content category one.

23 We believe that from the stand point of public
24 policy it's unequivocal that these systems provide --
25 fulfill all of the objections that the RPS program was

1 intended to achieve.

2 And for those reasons, you know, again, from the
3 perspective of public policy, do not see a sound basis
4 for merit and categorizing them in a way that's sort
5 of -- that significantly diminishes their value.

6 These resources are located in-State, are
7 clearly delivering energy to end-use customers in
8 California, and provide the full spectrum of economic
9 development, environmental reliability and hedging
10 benefits that have motivated the RPS program.

11 The characterization of RECs associated with
12 these facilities as portfolio consent category three
13 dramatically reduces the value of these resources, both
14 in economic terms, given the dramatically lower value
15 associated with that portfolio content category, and in
16 terms of their ability for -- they're ability to
17 facilitate utility achievement of RPS goals at reduced
18 costs by increasing the number of compliance options
19 that those utilities have.

20 Furthermore, as State and local incentives went
21 down, as we looked to schedule reductions in the ITC,
22 potential adverse outcomes of the Federal Trade Case
23 involving solar, and rate design changes were
24 implemented, as well as net energy metering looked at
25 the value of renewable energy credits and facilitating

1 ongoing deployment. And the sustainable solar industry
2 becomes that much more important.

3 Again, for these reasons we support any movement
4 that would allow these resources to be treated as
5 portfolio content category one.

6 One other note that I would like to point out is
7 that a number of states do allow RECs associated with
8 customer-side of the metered DG facilities to fully
9 participate and contribute to their respective RPS
10 programs.

11 For example, Colorado, Massachusetts, New
12 Jersey, Maryland, Ohio, Delaware and Pennsylvania are
13 among the states that do not place limits, to my
14 knowledge, or otherwise institute differentiated
15 policies that adversely affect the value and ability of
16 RECs to be used for RPS compliance purposes.

17 In fact, in a number of cases, RECs associated
18 with solar, whether DG or otherwise, actually hold
19 enhanced status within those programs.

20 California appears somewhat unique in
21 establishing a rule that effectively regulates the
22 customer-side-of-the-meter generation and the RECs
23 produced to these systems to what's essentially second-
24 class citizen status within the regulatory regime.

25 So, as I said, we'll provide more detailed

1 comments on the specific questions that were asked, but
2 I'm happy to take any questions now.

3 MR. HERRERA: So, Andy, I've got a quick
4 question for you --

5 MR. SCHWARTZ: Sure.

6 MR. HERRERA: -- and maybe, actually, longer.

7 So, is there a need to distinguish between
8 certain types of behind-the-meter DG?

9 For example, if it's owned by a utility, owned
10 by a customer? That's the first part of my question.

11 And the second part is, if we do allow that
12 categorized as PCC-1, how do you guard against
13 situations where you have existing load behind the meter
14 being served by on-site renewable generation?

15 And now, categorizing that as a PCC-1, rather
16 than a PCC-3 in the case, for example, where you have
17 the generator, again supplying some of his on-site load,
18 now entering into a PPA to sell all the power to a
19 utility and then immediately buying back that portion
20 needed for on-site load?

21 I mean, should we be concerned about that?

22 MR. SCHWARTZ: Well, you know, I think there is
23 a distinction to be made between RECs that are unbundled
24 from wholesale energy and RECs that are unbundled from
25 retail energy that's been used for end-use consumption.

1 In the case of customer-side systems, all of the
2 energy from that system is being delivered and consumed
3 on site.

4 And maybe this is different from the scenario
5 that you laid out. But in general for the systems, for
6 example that SolarCity is deploying, and most of TASC's
7 members are deploying and all the energy is being
8 consumed on site.

9 So, it's a retail -- it's essentially a retail
10 use of that energy.

11 It served kind of that final purpose, which is
12 distinct from a wholesale transaction where you have a
13 wholesale generator selling energy and RECs to a
14 utility, the utility immediately turning around and
15 selling that energy back for resale in the wholesale
16 market.

17 And so I think there's probably some light that
18 can be built between RECs being unbundled from -- or
19 from energy being used for final retail consumption
20 purposes versus RECs being unbundled from a wholesale
21 transaction.

22 In terms of the specific scenario, kind of the
23 buy/sell back arrangement, you know, again, from a
24 policy stand point if those facilities are achieving all
25 of the goals that the RPS was intended to achieve, then

1 I don't think a distinction should be made.

2 You know, the final -- we could keep in mind the
3 final objectives or the ultimate objectives of that
4 program which is, you know, hedging value, resource
5 diversification that would provide the hedging value and
6 environmental benefits, job creation benefits.

7 And there should be efforts made to interpret
8 and implement a policy that facilitates those
9 objectives.

10 So, I guess in the scenario you've described, I
11 don't know, as long as the facility is delivering energy
12 to final -- to its retail customers in California, I
13 guess I don't know if there's a major concern to be
14 addressed.

15 MR. HERRERA: Thanks.

16 MR. SCHWARTZ: Sure. Thank you.

17 MS. ZOCCHETTI: Thank you, Andy.

18 Next is Don Duchley (sic).

19 MR. OUCHLEY: It's actually Don Ouchley. I know
20 it's a --

21 MS. ZOCCHETTI: I apologize, sorry.

22 MR. OUCHLEY: That's okay. Good morning
23 Commissioner and Commission staff.

24 My name is Don Ouchley and I'm the Deputy
25 General Manager of Energy Resources at Merced Irrigation

1 District.

2 We really appreciate the opportunity to be here
3 this morning to discuss Senate Bill 591 and how it will
4 be implemented by the Commission.

5 I'd like to provide kind of an overview of this
6 legislation and our organization so you can understand
7 the background behind Senate Bill 591.

8 Merced Irrigation District has a long history of
9 delivering water, for irrigation purposes, to the San
10 Joaquin Valley.

11 More recently, in 1997 the District decided to
12 get into the electric distribution business in order to
13 benefit the ratepayers in our area and provide them
14 affordable electric energy.

15 We're a very small utility. We only have 8,000
16 customers, a combination of commercial and business
17 customers.

18 And to put that in perspective, that's three-
19 tens of one percent of the total electric customers in
20 California.

21 We're not only a small utility, but we're a new
22 utility. As I said, we got into business in 1997. We
23 issued bonds back that time. We had a business plan.
24 Incidentally, those bonds are still outstanding.

25 And we had a plan to grow the utility to be able

1 to pay the debt and at the same time provide our
2 customers with affordable energy.

3 We represent a very rural and extremely
4 disadvantaged community.

5 The authors of Senate Bill 591 actually
6 recognized that.

7 We're in the San Joaquin Valley, with a large
8 minority population.

9 By just about any metric that you use, our
10 community struggles. You can look at our unemployment
11 levels, the economic development, whatever you want to
12 use, we're at the bottom.

13 Even in the best of times our area is near the
14 bottom of the scale in the economics.

15 We do serve the public that we do serve with
16 affordable power. Twenty-six percent of the residents
17 are below the Federal poverty level in our area.

18 And the median income of the residents there is
19 approximately half of the State average.

20 So, I think you get the picture about our
21 situation in the San Joaquin Valley, in our service
22 area.

23 The other thing I'd like to point out is we're
24 rather unique as an electric utility provider because
25 our entire service area is overlapped with another

1 service provider which means that on any day, any time
2 our customers can go to the other provider. We compete
3 every day for every customer that we have.

4 The benefits of our service, we're a public-
5 owned utility. We're not a private corporation. We
6 don't have investors. It's all to benefit the people
7 that are in our community.

8 And Senate Bill 591, as I said before, was put
9 together and passed for that purpose.

10 We are committed to renewable energy. The fact
11 is, though, that we have some special circumstances in
12 our area and the Legislature, once again, recognized
13 that.

14 The special circumstances related to the
15 economic conditions in our area are almost a unique
16 factor in looking at the formulation of Senate Bill 591.

17 Our hydroelectric facilities that were built in
18 the late 60's, and we had a long-term contract with an
19 investor-owned utility to purchase the output. That
20 contract terminated on June the 30th at this year. And
21 at this time, the 1st of July, the first of this year
22 we've taken over the complete operation, the benefits,
23 and the expenses of that facility.

24 At certain times that hydro facility generates
25 more power than our retail load. At other times it

1 generates less.

2 And you might imagine, this year it's generating
3 less because of the water situation.

4 And we have no intent to undermine the RPS
5 program as it's laid out. But what we don't want to do
6 is place an extra burden on our customers at this time,
7 whenever the economics are so bad.

8 We're very proud of the fact that we've
9 supported renewable resources. And, in fact, we were
10 the very first sponsor with the University of
11 California's Solar Institute, and we work right with
12 them every day. Their research facility is one of our
13 customers and we're working with them to improve the
14 technology of solar. And that will be a benefit to the
15 RPS effort, also.

16 I do understand that there's questions about how
17 SB 591 should be implemented. Obviously, there's
18 questions.

19 What you should not question is that the
20 Legislature had specific intent to assist some of these
21 most disadvantaged people that we serve, and without
22 passing unburdened cost onto them.

23 The State Legislature understood the challenges
24 faced by our customers and as well as the other side of
25 the story, the situation that we're in.

1 Had they not, we wouldn't all be here today
2 talking about Senate Bill 591.

3 Any questions?

4 COMMISSIONER HOCHSCHILD: No, thank you.

5 MS. ZOCCHETTI: Thank you very much.

6 Next is Justin Wynne.

7 MR. WYNNE: Good morning. My name's Justin
8 Wynne. I'm also speaking on behalf of the Merced
9 Irrigation District.

10 And we are going to provide much more detailed
11 comments in our written comments, but I just wanted to
12 give a couple of initial responses to the questions in
13 Attachment A.

14 But I just wanted to reiterate one of the points
15 that Don had made. This wasn't -- SB 591 wasn't just
16 about a utility that had a lot of large hydro resources.
17 The discussion at the Legislature, the an analysis
18 always mentioned the extreme economic conditions that
19 they have in their service territory.

20 And so the goal isn't just to address the unique
21 situation of the hydro, it's also to protect their
22 community from rate hikes, and then also to protect the
23 industry in the local area to ensure that the economic
24 conditions can improve.

25 Just as we're going through the process of

1 implementing the bill, I think it may make sense in some
2 circumstances to look at the rationale or the actual
3 regulatory language that was used in the previous
4 rulemaking, where there were similar types of provisions
5 that were implemented.

6 I think, specifically, one of the most relevant
7 would be San Francisco's provision pursuant to section
8 39930(j) and then also, to some extent, the Power and
9 Water Resources Pooling Authorities calculation that was
10 under 39930(i).

11 But as we're looking at that, it's also
12 important to note that the subdivision (k), the section
13 that SB 591 was adopted under, is a completely unique
14 and stand-alone provision.

15 And so, we need to make sure that it's being
16 implemented pursuant to its language and gets
17 implemented correctly.

18 As far as some of the responses to the
19 questions, on the first set of questions relating to
20 determining if SB 591 applies, and that's something that
21 we're still looking at. I think it's a complicated
22 question.

23 I think that a multi-year averaging methodology
24 seems to make a lot of sense to us. We're still
25 determining if the seven years is appropriate, and if

1 that's the correct metric to go off of.

2 And then, also determining whether this would be
3 done on an annual basis or on a compliance period basis,
4 I think that's also something we're still taking a look
5 at.

6 But stepping back from that, I think it's
7 important to recognize that that 50 percent language was
8 really in there to designate that this is applying to
9 Merced. I don't think the Legislature intended that to
10 be a metric, a performance metric that Merced was
11 supposed to be meeting. It was to make sure that this
12 was describing one specific utility.

13 And that 50 percent number I think describes
14 typical operations for the Merced Irrigation District.

15 But, obviously, with some of the unique drought
16 challenges, the way that the calculation might actually
17 work on an individual basis is something that we're
18 still taking a lot at.

19 And like I said, that's something we'll provide
20 a lot more detailed comments on, on the 28th.

21 And then on to the next question as far as if it
22 does apply how the provision applies.

23 I think that it's consistent with the
24 Legislature's intent to provide genuine relief to the
25 community that's served by the Merced Irrigation

1 District, as well as it's consistent with the language
2 of the statute that the RPS obligations apply to the
3 portion of the load that isn't being served by the X-
4 Checker (phonetic) facility.

5 As far as some of the mechanics of how that
6 would be implemented, I think that's something that we
7 can talk further with staff on and something that we'll
8 follow up with in our comments.

9 On the issue of the bucket limitations, that's
10 one of the places I think it's useful to look at the San
11 Francisco provision and how that was implemented.

12 And so, as I look through the initial statement
13 of reasons and look at the legal, and policy
14 justifications for why the San Francisco provision was
15 implemented in the way it was, as far as bucket
16 limitations, those all seem to apply equally to the
17 Merced Irrigation District.

18 I think subdivision (k) of section 39930, is a
19 stand-alone provision. I think it can be viewed as a
20 stand-alone provision in the same way that San
21 Francisco's (j) subdivision can be viewed as a stand-
22 alone provision.

23 There isn't any express reference to the 39916
24 requirements.

25 And then, if you just think about it from a

1 policy and practical perspective of where they would
2 need to be complying with the bucket one requirements
3 through, you know, a PPA, as a 20-year PPA or through
4 ownership.

5 But if their hydro resources are varying so much
6 from year to year, that adds a whole level of
7 complexity.

8 Where, if they had three really great hydro
9 years, they've now got all this excess bucket one, but
10 because of the bundle requirements they would have to
11 sell off at a huge loss as a bucket three product.

12 And so, given the variability from year to year
13 of what their obligation is going to be, I think in the
14 same that it would apply with San Francisco it makes
15 sense to have them comply without regard to the bucket
16 requirements.

17 And then, as far as the annual and then just
18 some of the implementation issues, I think those are
19 things that we're going to have to discuss with staff,
20 what makes sense as far as when things are reported,
21 what the forms look like, what documentation is going to
22 be needed.

23 So, I think, obviously, there's going to be
24 somewhat of a process as we move forward. So, I think
25 we just look forward to working with staff and we'll

1 elaborate on a lot of these issues in our comments on
2 the 28th.

3 So, any questions?

4 MR. CAMACHO: I have a couple questions. So,
5 could you discuss why not annually? I mean, I heard
6 that you would prefer multi-average.

7 Well, one, if you prefer multi-average over how
8 many years? That's the first question.

9 MR. WYNNE: Yeah, and I think that sort of the
10 basis was the Power and Water Resources Pooling
11 Authority, they only have pumping load, and so they were
12 looking at it from a retail sales.

13 And so, when the whole process was going
14 through, the previous legislative process, they were
15 saying it was going to be difficult for them to have
16 this extreme variation because their actual retail sales
17 vary so much given on whether it's a drought year or
18 whether it's a very wet year.

19 And so they asked for the seven-year averaging
20 so that their retail sales could be averaged.

21 And I think as San Francisco went through, that
22 seemed like a reasonable choice of the seven years when
23 they were looking at how their provision would be
24 implemented.

25 But I think that before we just latch onto that

1 seven-year number, I think it would be useful to look at
2 what makes sense from a policy perspective and what
3 makes sense from what the statute -- how it's
4 structured, because that's not in the statute.

5 And I think the goal of the statute is that this
6 only applies to Merced. I think the purpose was that
7 there wouldn't be multiple different utilities that
8 could take advantage of this. And that the assumptions
9 of the legislation that they would still be getting the
10 power from Merced were going to still be in place.

11 And so, I think as long as those things are
12 true, I think it makes sense to adopt some sort of
13 methodology to make sure that just because there's a
14 severe drought year they're not going to get hit with
15 what the legislation was designed to avoid.

16 And so, I think it's just a matter of staff
17 looking through the numbers of what makes sense and then
18 just sort of from a policy perspective what makes sense.

19 MR. CAMACHO: That answers both questions, thank
20 you.

21 MR. HERRERA: So, I have a question, Justin.
22 So, drawing a comparison to San Francisco, I mean I
23 think one thing that staff looked at, Energy Commission
24 staff, was that on any given year that San Francisco's
25 entire electrical demand was being supplied by Hetch

1 Hetchy.

2 Whereas, at least my understanding right now, in
3 Merced's case that their large hydro doesn't provide all
4 their needs.

5 So, just looking at things factually, it appears
6 that perhaps they may be a little bit different than San
7 Francisco.

8 Whereas in San Francisco's case they typically
9 do not need to procure any additional renewable
10 resources because they're entire load is being supplied
11 by Hetch Hetchy.

12 Whereas in Merced's case, on an average year,
13 they will know that they will have to procure additional
14 renewable resources, right?

15 So, I do think there are years where their
16 entire load -- where Merced's entire load will be met by
17 X Checker. And that's happened recently or, you know,
18 almost all the way there.

19 So, in that sense it is similar.

20 And also, just as far as the items that I saw in
21 the initial statements of reasons that wasn't -- the
22 magnitude and the frequency wasn't a factor.

23 And so, it will be the same for them where it
24 could be -- it is going to be all over the place. Even
25 if on average it's lower, I think the same factors

1 apply.

2 And I think we could provide some of the data of
3 what the typical generation versus load looks like.

4 MR. HERRERA: So, yeah, I'd be interested in
5 seeing that data. I mean if it's hard for a POU to
6 predict what its needs are going to be in the future
7 because of the varied amount of hydro generation that
8 they acquire, it may be difficult to plan for that, and
9 so you wouldn't have advance notice that you'd be --
10 you're going to be short, right?

11 MR. WYNNE: Yeah, exactly.

12 MR. HERRERA: Okay. Thank you.

13 MR. WYNNE: Thank you.

14 MS. ZOCCHETTI: Linda Johnson.

15 MS. JOHNSON: Good morning. I'm Linda Johnson.
16 I'm representing the small POUs. We've been
17 participating fully in the RPS process, the CEC's RPS
18 process and have submitted comments before.

19 But the small POU group that we represent is an
20 ad hoc group of very small publicly-owned utilities that
21 were, for the most part, formed at the time of the
22 energy crisis in California, with the intent of better
23 controlling energy prices and providing economic
24 development opportunities in their communities.

25 COMMISSIONER HOCHSCHILD: Can you identify,

1 again, for our benefit, who's in that group?

2 MS. JOHNSON: The Cities of Cerritos, Moreno
3 Valley, Corona, Rancho Cucamonga, Victorville,
4 Pittsburgh Island Energy.

5 And they have different interests at different
6 times, so these are kind of general comments related to
7 topic two, which is the distributed generation issue.

8 We've previously submitted comments in general
9 arguing for accommodations and flexible compliance
10 measures due to the various factors that are unique to
11 this group because they've been in business for such a
12 short period of time, and because they're very small.

13 And so, they don't have some of the kinds of
14 scale and flexibility to deal with the wholesale power
15 markets.

16 But at this workshop we're providing comments in
17 support of classifying distributed generation as PCC-1
18 because we think there's some unique opportunities and
19 consistency with the economic development goals of this
20 group that are very valuable to continue to implement
21 the RPS policies in the State, and are consistent with
22 the RPS policies in the States.

23 So, the expanded use of distributed generation
24 systems fits well with the economic development business
25 model. And we think it's also consistent with the

1 future of the utility model.

2 These systems are based -- and what we're
3 proposing is based on creating a partnership with
4 customers to develop renewable resources which meet the
5 requirements for PCC-1 resources, while also fulfilling
6 the community's economic development goals.

7 We're going to be submitting written comments,
8 getting more into the specifics of some of the questions
9 that were asked, both in Attachment A and in the
10 presentation, earlier.

11 So, I'm going to just keep this kind of general.
12 We just want to emphasize that we consider the unique
13 capabilities and goals of these small utilities to be
14 really opposite to the old model of net metering and
15 distributed generation, which seem to be the focus of
16 some of the questions.

17 We're urging the CEC to affirm flexible policies
18 to allow development of innovative options and
19 facilitate what we believe is a future model based on
20 extensive use of distributed generation with the
21 cooperation and support of the utility.

22 Our proposed use of distributed generation to
23 meet RPS requirements is not simply another name for net
24 metering.

25 Instead, the partnership should be treated as a

1 whole different approach, as a way of providing economic
2 development incentives for new business, while providing
3 the reliability and integrated technology solutions that
4 are available to the utility and its diversified
5 resource portfolio.

6 In the future of micro-grids, internet-operated
7 equipment and built-in energy solutions, we see concepts
8 like net metering going away because such mandates will
9 no longer be required or necessary.

10 In such an environment, utility/customer
11 partnerships, like the one we're asking the CEC to
12 affirm will be absolutely essential.

13 To summarize some of our -- the answers to the
14 questions that we anticipate presenting, the
15 transactions are different from net metering programs
16 because the title to the bundle that renewable energy
17 passes -- resources passes to the utility, under
18 contract with the customer or other owner of the
19 distributed generation system, the bundled energy is
20 delivered under separate metering arrangement.

21 The retail load to the customer will continue to
22 be included in the utility's total retail sales figure
23 for calculation of RPS requirements since the retail
24 load is independent of the generation the customer's
25 selling to the utility.

1 And last, this is just a new approach to meeting
2 State policies, encouraging distributed generation of
3 renewables and economic development, for that matter,
4 too, and is a voluntary partnership between the utility
5 and the customer, not a mandate.

6 Are there any questions? Thank you.

7 MS. ZOCCHETTI: Thank you, Linda.

8 Next is John Pappas.

9 MR. PAPPAS: Good morning Commissioner and good
10 morning Commission staff.

11 PG&E appreciates the opportunity to comment on
12 the issues and questions raised by CEC staff regarding
13 the planned revisions to the RPS enforcement rules for
14 POUs.

15 We intend to file written comments on these
16 topics that are more specific. And in addition, we'll
17 provide additional background in cases where the CPUC
18 has interpreted the RPS statute on these issues.

19 Our overriding concern on the topics addressed
20 herein are that the rules should be applied fairly and
21 consistently across all load-serving entities, whether
22 they're retail sellers under the CPUC's jurisdiction, or
23 local, publicly-owned utilities.

24 In addition, PG&E believes that in the interest
25 of achieving the State's over-arching RPS goals in a

1 nondiscriminatory way, a statutory exemption should be
2 strictly limited to the Legislature's language and
3 intent, and should not be broadened through
4 administrative implementation.

5 The only specific topic that I'll talk about
6 today is the last one on dynamic transfer agreements.

7 PG&E's view is that the legislation is clear
8 that the arrangements to dynamically transfer output
9 into a California balancing authority, whether by
10 pseudo-tie or dynamic schedule, qualify for portfolio
11 content category one treatment provided that the
12 facilities are dynamically transferred into a California
13 balancing authority.

14 It looks like the staff's concern on this matter
15 is that a facility that dynamically scheduled into a
16 balancing authority, other than a California balancing
17 authority, may count as PCC-1.

18 And we believe that actually that concern is
19 misplaced since the statute specifically requires and
20 the regulations should reflect that, that the dynamic
21 transfer is into a California balancing authority.

22 So, I think the problem is solved, assuming that
23 the dynamic transfer is to a California balancing
24 authority.

25 As far as other dynamic -- I mean treating other

1 products that are transmitted in real time, through
2 other scheduling arrangements, for those it is
3 reasonable to require verification of the hourly
4 schedule and E-tags with regard to PCC-1 claims.

5 However -- but in the case of a dynamic transfer
6 that's going into a California balancing authority,
7 those things are, per se, PCC-1 and should not need to
8 be documented through administratively burdensome
9 hourly, or sub-hourly verification requirements.

10 So, just to sum up, the statute does not
11 distinguish between types of dynamic transfers.
12 Accordingly, the regulations should treat dynamic
13 scheduling no differently than pseudo-tie arrangements.

14 Thank you for the opportunity to comment and
15 does anyone have any questions?

16 COMMISSIONER HOCHSCHILD: Yeah, I just wonder if
17 you could comment just more broadly on -- I understand,
18 you know, generally the goal consistent in application
19 of the law.

20 MR. PAPPAS: Uh-huh.

21 COMMISSIONER HOCHSCHILD: But for the specific
22 circumstance of the small POU's which are, you know, in
23 many cases some of these POU's have one staff person
24 running them.

25 MR. PAPPAS: Yeah.

1 COMMISSIONER HOCHSCHILD: Could you just comment
2 on, you know, your thoughts on their proposal on this
3 PCC-1 idea?

4 I mean do you feel there should be leeway there
5 for the different circumstances or, really, in all cases
6 everything should be identical, essentially?

7 MR. PAPPAS: I think it should be identical. I
8 mean, frankly, if there is a movement to categorize
9 behind-the-meter RECs, shall we say, as PCC-1, I mean I
10 think that should be available to anyone in the State.

11 I don't see that you can sort of parse it out
12 between different entities, whether they're very small
13 or, you know, a little bit bigger, or medium size, so on
14 and so forth.

15 And I think that's sort of a dangerous area to
16 try to draw the line there.

17 I mean, you know, there are legislative
18 exemptions that are written into the legislation, such
19 as the 591 that we talked about. I mean if it's in the
20 legislation, that's a different matter.

21 But I think in this case it should be applied
22 equally. And if it turns out that the CEC decides to go
23 this route, I think folks would strongly argue that the
24 CPUC should do the same thing.

25 MR. HERRERA: Thank you. So, John, I've got two

1 questions just to follow up to Commissioner Hochschild's
2 questions.

3 Does PG&E own DG? Do you have situations or
4 systems where you employ DG on PG&E facilities, say like
5 a maintenance facility?

6 And because it's an IOU-owned DG system, would
7 you then characterize that as PCC-1, even though that
8 power may be used on site?

9 MR. PAPPAS: I don't think we actually have --

10 MR. HERRERA: Okay.

11 MR. PAPPAS: I mean I'm not sure. We do have
12 solar and most of it is just going into the system, and
13 we've got some fairly large projects which are clearly
14 not DG.

15 We have a few facilities in San Francisco, I
16 think at a service yard, and also I think at the ball
17 park that actually are PCC-1 because they do provide
18 power to the grid.

19 So, I don't know that we have any that are
20 behind the meter.

21 Certainly, if they were behind the meter, under
22 the current rules then those would be considered PCC-3.

23 MR. HERRERA: Okay, interesting.

24 And then my second question deals with dynamic
25 transfer. So, I guess our understanding is that there

1 is a difference between pseudo-tie facilities and
2 facilities that transfer electricity through a pseudo-
3 tie arrangement versus a dynamic schedule.

4 And so, we were a little concerned that in the
5 latter there could be situations where perhaps the
6 electricity isn't being scheduled for consumption in a
7 California balancing authority, you know, on an hourly
8 basis, such as real-time electricity in PCC-1.

9 I mean, in that circumstance does it make sense
10 to treat that electricity product differently from other
11 PCC-1 products?

12 MR. PAPPAS: I mean if it's not -- if the
13 dynamic transfer is to schedule it into a California
14 balancing authority, then that should clearly be PCC-1.

15 So, sort of setting that aside, if you're
16 talking about a situation where you have a dynamic
17 transfer, but it's not being scheduled, so it's
18 scheduled into some entirely different balancing
19 authority --

20 MR. HERRERA: Right.

21 MR. PAPPAS: -- I suppose that that -- you know,
22 that shouldn't apply.

23 But as long as the other arrangement clearly is
24 PCC-1 and you don't need to go to the hourly
25 verification, the other arrangement being dynamic

1 transfer -- dynamic schedule into a California balancing
2 authority, that should always be PCC-1.

3 MR. HERRERA: Thanks.

4 MR. PAPPAS: Yeah. All right thank you.

5 MS. ZOCCHETTI: Thank you, John.

6 Tony Goncalves.

7 MR. GONCALVES: Good morning Commissioner and
8 staff. I'd like to thank you for the opportunity to
9 speak before you today. I've waited a year to be able
10 to come up and actually speak to you, and try to
11 influence any decisions.

12 I'm going to speak just to topic five today. We
13 do have some written comments. I've actually already
14 submitted those because I won't be around through the
15 deadline.

16 To start, I mean the simple answer to the
17 question is, yes, we should allow these short-term
18 contracts that are amended to be long-term contracts, to
19 not be subtracted from the excess procurement
20 calculation.

21 But I don't think this quite goes far enough. I
22 think perhaps it's meant here, but you address just the
23 short-term contracts.

24 I think the amendment provision should also
25 apply to long-term contracts. So, if you have a long-

1 term contract that gets amended to an extended term,
2 that you should still be able to count that as a long-
3 term contract and not have that amendment trigger a new
4 contract.

5 And along the same lines, I'm going to kind of
6 hit a couple of things under excess procurement that
7 weren't directly address here, in the question.

8 But I also believe that you should allow, or ask
9 the Commission to consider allow amendments to the
10 capacity, or generation or RECs under the contract at
11 least for short term to also not trigger a new contract.

12 And, you know, this comes into the case where
13 you've got some facilities that are looking at, or POU's
14 looking at employing an excess procurement strategy. If
15 you have any contract that is short term, it basically
16 destroys your excess procurement strategy.

17 And under certain circumstances you may have
18 situations, especially towards the end of a compliance
19 period, whether either you have contracts that you have,
20 that are long term, that for some reason either under-
21 procure, you have loss of generation for some reason,
22 fire, storm damage, or you just have some unexpected
23 load growth that somehow got unaccounted for. Right at
24 the end somebody comes in who didn't tell you until the
25 last minute.

1 And it's difficult to -- or it can be difficult
2 to get a long-term contract under that situation,
3 especially if you need it for a short term.

4 Under the case where you've got fire or damage,
5 where the facility's going to be down for maybe a year
6 or two, at the most, it doesn't make a lot of sense to
7 go out and get a long-term contract when you only need
8 generation for a couple of years.

9 So, under that situation, I respectfully request
10 that the Commission consider not only allowing
11 amendments to long-term contracts for short periods, you
12 know, adjusting the generation to cover that short-term
13 loss, but also if you would consider allowing short-term
14 contracts, under very specific situations.

15 So, under the case where you've lost generation,
16 especially as you get towards the end of a compliance
17 period to consider allowing contracts that are short
18 term in base, under very specific circumstances and
19 you'd have to demonstrate that you already had that
20 generation, you had generation on a contract to meet
21 your obligation, to perhaps allow those to not be
22 subtracted out of the excess procurement calculation.

23 I mean under those circumstances and -- I mean
24 as a POU, you basically would have two options. One is
25 throw that strategy completely out the door.

1 The other option would be to simply look at the
2 provisions of a waiver of time of compliance.

3 Now, if you had the generation under long-term
4 contracts, already, and you lost it at the end of the
5 compliance period, I think you would have all the
6 reasonable justifications to apply for a waiver of time
7 of compliance.

8 A waiver of time of compliance basically ends up
9 with less generation because you get -- you don't have
10 to purchase that additional generation and you still
11 meet the provisions of the RPS requirements.

12 Now, from Roseville's perspective, our
13 preference is always going to be to meet the RPS
14 requirements based on achieving the percentages of
15 renewables that are in the regulations.

16 But if we move forward with an excess
17 procurement strategy and we're faced with the situation
18 of either throwing that strategy completely out the
19 door, or filing for a waiver of time of compliance,
20 we're likely going to do the waiver of time of
21 compliance.

22 We've found -- you know, we did -- we were in
23 the situation of having to procure short-term contracts
24 at the end of the first compliance period. And while we
25 were not doing the excess procurement at that point, we

1 did find it very difficult to acquire even short-term
2 contracts under a short amount of time, let alone trying
3 to get a long-term contract that would most likely
4 require going to either a board or city council, which
5 cuts down the amount of time that you have to deal with
6 that.

7 So, I'd respectfully request that the Commission
8 consider that.

9 The other item that I'd like to bring up also
10 falls under the excess procurement and that is the
11 subtraction of short-term PCC-3 from the excess
12 procurement calculation.

13 I do understand the provisions and the rationale
14 on why long-term contracts were reintroduced in the last
15 15-day language, when the regulations were adopted.

16 And I won't make any arguments for PCC-1 or PCC-
17 2, but PCC-3 really is designed to be excess energy.
18 And not only is it difficult to find a PCC-3 contract
19 that is out there for ten years, but it's hard to
20 imagine why an individual facility or developer would be
21 willing to commit ten years' of RECs only when they can
22 go out and try to sell their contract -- especially
23 going out that long, try to sell their energy at a PCC-2
24 or PCC-1 that is certainly much more lucrative.

25 And no facility is ever going to be built or

1 operated on PCC-3 alone, it just isn't feasible.

2 Now, we've been trying to find long-term PCC-3
3 and it hasn't been easy. What we've seen, typically is
4 looking like the prices are going up considerably,
5 especially in the outer years, which we'd expect.

6 So, we're really looking at, under this
7 requirement for long-term PCC-3, in order to qualify for
8 excess procurement, that we're probably going to see a
9 three to six time increase in the cost of PCC-3 RECs
10 over the ten-year term in order to be able to get a ten-
11 year contract.

12 And with that, I'll conclude my comments and
13 take any questions you might have.

14 COMMISSIONER HOCHSCHILD: One question, and this
15 is for Tony, how would you avoid any kind of gaming, you
16 know, if -- you know, to your point. I mean that would
17 be my concern?

18 MR. GONCALVES: Which one, on short-term
19 contracts or --

20 COMMISSIONER HOCHSCHILD: Yeah.

21 MR. GONCALVES: You know, that one I think you
22 can put in provisions that require a POU to demonstrate
23 that they had under contract enough generation, under
24 long-term contracts, that would have met their
25 obligations.

1 And so, you can demonstrate, you know, if you
2 have a facility that goes down for a fire, or you have a
3 facility that just for some reason under-performs, or
4 the other example is you have a new facility that's just
5 coming online, you're expecting it to come online at the
6 beginning of, say, 2016 for the third compliance period
7 and you count a year's worth of generation and that
8 facility doesn't start until June, July, August. And
9 so, you've lost half a year's worth of generation.

10 Well, you've got that facility going forward to
11 meet your obligations and you don't need another ten-
12 year contract because now you're way over-procuring and
13 adding additional costs to your ratepayers.

14 Those are the kinds of situations where you can
15 put in some requirements to demonstrate that you would
16 have met that need or demonstrate under the other
17 circumstance where you've got -- your load increases,
18 you know, unexpectedly.

19 You have historical load and you have load
20 forecasts that show your projected loads and suddenly
21 you have a huge bump. You've got a big company that
22 comes in. And if you're fairly small, it doesn't take a
23 lot to throw that load off.

24 And while you'd want to get a long-term contract
25 to account for that, trying to do that in a short amount

1 of time might be difficult. So, allowing a short-term
2 contract to meet that near-term increase in load, say a
3 year or two, you can limit the amount of time for which
4 you can do those short-term contracts, and then
5 procure -- take your time to procure a long-term
6 contract so you're not -- you know, developers know if
7 you're at the end of a compliance period and you're out
8 looking for generation, they know you're desperate and
9 you typically will pay a little bit more.

10 And we did find that at the end of the first
11 compliance period. You know, in our example it was we
12 started six months before the end of the year, working
13 on developing it.

14 I'll tell you that our last contract was signed
15 on December 20th, and that was the last piece we needed.
16 We did meet our obligation, but it took us until
17 December 20th to be able to get all the contracts we
18 needed.

19 COMMISSIONER HOCHSCHILD: Thank you.

20 MR. CAMACHO: So, I have a question.

21 MR. GONCALVES: Yes.

22 MR. CAMACHO: So, on the question about
23 amendment to contracts --

24 MR. GONCALVES: Yes.

25 MR. CAMACHO: -- so you would agree that this

1 type of amendment matters, right? So would you propose,
2 then, a criteria to evaluate whether an amendment should
3 make a contract, you know, a new contract or not?

4 And if so, how would that criteria look?

5 MR. GONCALVES: Well, under the extension of the
6 term, I think just like taking a short term to a long
7 term, I think extension of the term under, you know,
8 just the length under, you know, the same generation
9 RECs that you're getting. I think those should be
10 allowed.

11 I mean the goal is to get new generation online
12 and to have it continue to operate.

13 And so, if we have a new facility, we sign a
14 ten-year contract, we've helped bring that facility
15 online and retain it online.

16 If we now take and we extend that contract, say,
17 another five years, we're continuing to help that
18 facility remain online.

19 So, I think under extension of term that perhaps
20 you don't have a lot of requirements.

21 Now, the suggestion on increasing -- allowing
22 for increase in the capacity for short term, that I
23 think would be -- you put similar requirements to
24 allowing short-term contracts.

25 Where, under specific circumstances -- because

1 you may be able to -- again, you lose some generation
2 because another contract under-performs, or has a fire
3 and is out for a while, you know, perhaps you only need
4 a year's worth of generation.

5 So, again, for increases in capacity I would
6 suggest that being the short-term allowance to account
7 for losses.

8 So, you kind of have the same provisions that
9 you might put in for allowing short-term contracts.

10 MR. CAMACHO: Thank you.

11 MR. GONCALVES: Thank you.

12 MS. ZOCCHETTI: Thank you, Tony.

13 Bill Westerfield.

14 MR. WESTERFIELD: Good morning, Bill Westerfield
15 with the Sacramento Municipal Utility District. Good
16 morning Commissioner, good morning staff.

17 I'd just like to make some high-level comments
18 about topic two, and that SMUD does support flexible
19 contractual arrangements to all for all generation from
20 DG systems in California to be counted as PCC-1, whether
21 they're behind the meter or not.

22 SMUD has commented repeatedly in the drafting of
23 the enforcement regulations that all electricity from DG
24 systems, with their first points of interconnection,
25 with distribution facilities of a California balancing

1 authority, used to serve California load are legally
2 PCC-1 resources under the statute.

3 We believe that's what the Legislature intended.

4 It seems that the notice has opened up that
5 question, again, and so we urge the Commission to
6 reconsider the exclusion of behind-the-meter generation
7 as PCC-1. We think it should be PCC-1.

8 We think that these are all category one
9 resources because, quite plainly, the statute says they
10 are.

11 All that's required is that the system have its
12 point of interconnection with a California balancing
13 authority and that's satisfied by these DG systems.

14 So, we think that that plainly qualifies them as
15 PCC-1 and that any contractual arrangements to enable
16 that should be encouraged by the Commission.

17 We frankly don't understand the buy/sell back
18 concern. These systems serve California retail
19 customers. That's the point.

20 There is a fundamental -- this is the
21 fundamental distinction and attribute of PCC-1
22 resources. The Legislature intended DG to be PCC-1.

23 So, we think the Commission should consider any
24 contractual arrangements that give effect to that
25 legislative intent.

1 So, I'd be happy to answer any questions.

2 MS. ZOCCHETTI: Thank you, Bill.

3 Are there any other folks in the room that wish
4 to comment?

5 MR. WRIGHT: I thank you, Walker Wright with the
6 Alliance for Solar Choice.

7 My colleague, Andy, covered most of what we want
8 to say today or in further comments.

9 But just wanted to follow up on the fact that
10 we're heartened by the comments from PG&E on consistency
11 across the State, and also from the public power in
12 terms of wanting behind-the-meter to go beyond what is
13 currently, sincerely a second-class citizenship.

14 You know, from a national perspective, my
15 company, Sunrun, we still don't understand the rules in
16 California. Our investors do not understand the rules
17 in California.

18 And as rooftop solar approaches a major drop in
19 the ITC, changes in rate design, and we're at the end of
20 the rebate program, it makes sense for there -- there
21 has to be some value for these clean electrons.

22 An electron that goes from my rooftop down to my
23 toaster must have RPS-qualified value in California, the
24 way it does across the country.

25 And we have a team of, you know, REC transaction

1 folks who are currently looking at even trying to do the
2 paperwork for category three in California, and we're
3 not doing it because of the hurdles from a bureaucracy
4 stand point.

5 So, I urge consistency across the State. And I
6 think starting right now, with the public power, would
7 be a great start. Thank you.

8 MS. ZOCCHETTI: Thank you.

9 Any other comments from the folks in attendance?

10 All right, seeing none, we are looking at WebEx.
11 I don't believe we have any comments through WebEx.

12 Okay, and then we're going to go ahead and
13 unmute the phones. If you are a call-in participant,
14 please just unmute your phone when you're ready to
15 speak.

16 Let me know, Theresa, when we're unmuted. We
17 are unmuted. Hello?

18 Hello, anyone on the phone wish to comment?

19 Going once -- it sounded like someone unmuted
20 their phone, one more opportunity, any comments from the
21 phone?

22 All right, hearing none I'm going to -- please
23 go ahead and mute the phones again, Theresa. Thank you.

24 I'm going to put the schedule up just to remind
25 everyone of kind of next steps. Again, the written

1 comments, which we look forward to, I know many of you
2 are planning to provide more details in your written
3 comments and we really appreciate that.

4 We look very closely at those. Please submit
5 them by July 28th. Note that the deadline is 4:00 p.m.

6 We would appreciate that you submit them both to
7 the docket and to our staff's e-mail so that there's no
8 delay in getting those comments to staff.

9 Please include the docket number and indicate
10 the Renewables Portfolio Standard in the subject line.
11 That really helps everyone.

12 Lucky Emily gets to have you contact her for
13 questions or comments.

14 I think that we're anticipating that the next
15 steps will be that you will see draft language. In the
16 formal rulemaking process, we'll begin with that.

17 So, we do look forward to working with many of
18 you, as was said in the comments on, you know,
19 individual meetings, with discussions on how we should
20 move forward.

21 And we really appreciate your participation
22 today.

23 And thank you, Commissioner Hochschild for
24 making the time to join us.

25 And with that, I think we are adjourned. Have a

1 really nice weekend.

2 (Thereupon, the Workshop was adjourned at
3 10:41 a.m.)
