## **Puente Hills Power Plant**

The Washington Post has identified Ventura County as the #1 desirable area in the U.S. based on climate, access to water and topographic variations. Yet another power plant detracts from the livability here.

Oxnard is bearing an unfair burden of power plants currently with 2 power plants and a peaker plant.

If you look at the seismic liquefaction maps, most of Oxnard is in a potential for liquefaction due to earthquakes.

These power plants are located in a poor location which would be subject to liquefaction.
