New power plant proposed

As a full time resident of Oxnard , and a long time resident who opposes any new power plants within the coastal environment I find many reasons to question the judgement of the coastal commission. Just one of these is the environmental injustices placed on this community. As it was in the past and continues today, we see communities of color being forced to endure the pollution of power plants because spineless politicians and so called coastal "protectors " (commissioners) bend to the wishes of wealthier and more powerful self interested communities. Several years ago when Edison was then proposing the new "peaker" plant on this site, Edison said that if we did not want it here, they would, "build it on out site in Moorpark". Well what do you think happened? After our City government, local politicians, and thousands of local citizens ,registering their numerous complaints all of which fell on deaf ears,we now are saddled with the peaker plant. Another new power plant on this property? History will record the next saga of environmental injustice upon powerless communities, and the coastal commission will have to own it!
