

DOCKETED

Docket Number:	15-AFC-01
Project Title:	Puente Power Project
TN #:	215590
Document Title:	Exhibit 5001 Ellwood Fact sheet
Description:	Exhibit 5001 Ellwood Fact sheet
Filer:	Robert Sarvey
Organization:	Robert Sarvey
Submitter Role:	Intervenor
Submission Date:	1/27/2017 10:04:18 AM
Docketed Date:	1/27/2017

- + Operated and maintained off-site
- + Began operations in 1973
- + Low nitrogen oxide (NOx) combustors
- + Water injectors

30 Las Arnas Road, Goleta, CA 93117

NRG Owned (Net MW): 54

ISO (Customer): CAISO

NRG Ownership: 100%

The NRG Ellwood Generating Station uses two natural gas-fired, simple cycle combustion turbines to turn a generator with a maximum capacity of 54 MW. It began operation in 1973. The facility is maintained and operated by employees at the Mandalay Generating Station.

Community Involvement

Employees are very active in the community, donating to various fundraisers and charities. They have preserved a relationship with the Goleta Rotary Club for more than a decade and have supported the Goleta Rotary-sponsored graffiti abatement program. The station also participates in the Salvation Army's Adopt an Angel program.

Environmental Responsibility

Each of the combustion turbines is equipped with a dry low-NOx combustor to reduce nitrogen oxide emissions. The plant also has an ongoing recycling program to support sustainability goals.
